Must be some good stuff you are smoking or is it that three day old road kill you are eating. The FBI is looking for stars like you. You are one sick puppy.

1885. Steady UHF interference, CT

Newsgroup: rec.radio.scanner
Date: 2006-06-13 04:11:21 UTC
From: rval058@comcast.net
Message-ID: <1150171881.610072.117480@p79g2000cwp.googlegroups.com>
Source record: 8715

Anyone have a clue what could be causing a steady around the clock one-second interval ON/OFF CARRIER on UHF? It seems strongest at 463.600 and comes in on NFM WFM and AM modes. It covers a good 2-3 mile radius in a hilltop area, and seems no stronger at my house than 2 miles away. I can't seem to locate the source, it has many harmonics and pops up all over UH. With a decent outside antenna, it interferes with HF as well. Knocks the front end of scanners useless for UHF. Very annoying. I live on a hilltop. Would it be a relay link of some sort?

Area: Chippens Hill - Bristol, CT

Reagan may have wanted a WW3, but he didn't use drugs. The documentary I saw
about JFK said he had a Dr. shooting him up with meth up to 5 times a day.
I'm not the conspiracy theory type of person, but I can see why a government
organization would want him dead.

The fact that he "ruined" government (government as it was, at any
rate), might have something to do with that.

Take a portable receiver that's receiving the interference, walk
around until it gets really strong, take off the antenna and walk
around until it gets really strong again. You'll be pretty close to
the source at that point.

Actually, if you knew anything about "radio" in general, you would realize
that we DO have more than one CB service; matter of fact, there are 5 CB
Services.

One (GMRS) requires a license, one that in non-voice (R/C,) and 3 that are
open to whomever wants to use them, license-free (CB, FRS, and MURS.)

Get at least a SMALL clue...

Nope, but I know someone that has a memory problem on a BCT7. Looses memory randomly, though only when not connected to power. My guess is a bad capacitor in his unit. For yours, I can't see how it could loose memory considering it was powered up the whole time. Only "best guess" scenario I can come up with is an intermittent short (or open) in the memory circuit, possibly temperature related.

Oh jeebsus-h-christmas on a rocket-propelled sled in the Nevada desert!
You are one dumbass dipshit. A perfect ambassador for ham radio.

You were'nt the FATASS I saw on that scooter at Dayton
pulling that wagon of junk around were you???

I mean.....Jeeze!

I never saw so many FAT ASS HAMS ON SCOOTERS at Dayton this year.
Bet the electric bill to re-charge all those Electric Mobility scooters was
TWICE
the cost what it needed to run the Icom and Yaesu display!

Here's your future of ham radio folks!
OLD FARTS who EAT and SMOKE themselves to death
faster than the barstool warmers at the local VFW and AL Post!

> God bless America.

Did you know that G-d spelled backwards is "dog".

Yeah, that's all we say on 11 meters. I can't wait till they start handing
out tickets like they did with CB just so I can go on 80 meters and say
AAAAAAAAAAAAUDIOOOOOOOOO
Can I run my echo on 80 meters too?
Get a life. Many a good ham has roots in CB.

If they did what you want, ham radio would be dead in just a few years.

The primary problem causers in the past and present aren't new hams,
they are the old timers who passed all the elements a long time ago.
Maybe it's the cause of their behavior?

The code needed to go 40 years ago, it's about time it was removed as a
requirement.

1911. Re: BC895XL Loses Memory

Newsgroup: rec.radio.scanner
Date: 2006-06-14 16:47:44 UTC
From: PowerHouse Communications <PowerHouse@PrivateBox.Net>
Message-ID: <d4Xjg.162$Rj.107@fe02.lga>
Source record: 8741

I guess the temperature factor depends upon how long the unit was on before
it lost it's memory. If the unit had just been turned on and programmed,
the components inside may not have "warmed up" the inside of the case to the
point where the temperature (potentially) effects the circuit, though that
temperature possibly was reached sometime during the night... Again,
complete speculation, as I don't know how long the unit was powered up
before "overnight" happened, or even if that is the real problem at all.

I also have a BC780 and someone commented on the Tape Out jack
being constant volume at line level. Unless I accidentally plugged in
to the Speaker jack, I thought I remember that the Tape Out jack
volume varied with the Volume control right along with the speaker
output. I feed speaker audio in to my computer sound card, but I just
set the volume control and try not to bump it later. The only other
thing I remember is that you have to enable the recorder output on a
channel by channel basis. If there is a way to get a fixed level out
of that jack, I may revisit its use as it would make setting up the
computer to record much easier.

1915. Cleveland, Ohio Police Scanner Feed

Newsgroup: rec.radio.scanner
Date: 2006-06-14 19:56:20 UTC
From: martin@hydrogen.cis.okstate.edu
Message-ID: <e6ppl4$6f4$1@hydrogen.cis.okstate.edu>
Source record: 8745

I looked up scanner feeds for Cleveland, Ohio recently and
found a web site that has one, but I can't seem to find the link to
the streaming audio. I use Linux and, as a computer user who happens
to be blind, the GUI-based browsers such as Netscape and similar don't
work yet. There is an excellent program in Linux called MPlayer whose
latest version is MPlayer-1.0pre8 and it can play most all the common
streaming audio formats such as Windows Media and Realaudio. What one
must do is to find the link using the lynx or similar browser which
usually comes down to a .ram or .asx file. You get that file and use
it as the playlist option in mplayer and everything works fine if you
can get that far. Several people were helpful last year on a couple
of feeds I was looking for so I am asking if anyone knows the feed URL
for the Cleveland site. If it requires flash or shockwave, I am out
of luck, but sometimes, the site simply has more javascript than is
useful and the link can't be teased out of the mess.

Many thanks for any help. I have never been to Cleveland, but
I used to listen when they were on 37.180 MHZ during Sporadic E
openings in the Summer and they would sometimes just boom in to
Oklahoma and Arkansas in the late sixties.

It shouldn't. It should be line level, which is about the level at the top of the volume control.

> I also have a BC780 and someone commented on the Tape Out jack
>being constant volume at line level.

Well, I am at home and I checked again and my sometimes
failing memory was correct. If you do enable the Tape output, you get
audio, all right, and it is fine, but it is effected by the volume
control just like the speaker. It also appears to have a higher
impedance and really didn't sound as good as it does through the
speaker. You also hear the speaker which may or may not be a problem.

Modernizing ham radio:

No more CW, easier to pass written exams. We Should change the names: Tech, General & Extra too. No sense hanging with the dinosaurs when there's no need to be proficient at anything anymore:

Appliance Operator 1st Class, Appliance Operator 2nd Class

Appliance Operator 3rd Class, No Class

Now Ten twenty-seven to channel one nine to get a preview of the new classes. I'm ten seven. Any one got a ten thirty-six hello.

Sorry for the CB lingo, I'm just getting practiced up so I can understand people when the CW test goes away.

You really want modernization?

Sure I want modernization. I dont have to put up with any of it. I havent been on the air for at least ten years. I renewed the license, then put it away.
The ham bands are gonna go away, and soon. They are gonna go the same way that respect for your fellow amateur went, cooperation went, etc. The FCC has a vested interest in shutting the ham bands down, since their funding got cut years ago. BPL looked like a winning plan to shut it all down so they could sell it off, but that flopped, since it also interfered with other emergency services, like police and fire. so, the easiest way to shut it down for good is to just hand it over to the cb crowd. They will make a complete mess out of it, and they wont waste any time doing it, either.

Then the FCC can improve their funding, considerably. Just think, the fines from the violations alone will come to millions. Did you really think that the FCC was looking for "new innovations and inventions" coming out of ham radio ? This is the digital age, guy.
In the meantime, enjoy these tirades from folks about the "fat-amateur". Me, I pump iron every day, and could probably knock most of them on their keester without even breaking a sweat, and im twice their age. The irony of them opening their mouths has not escaped me, these new, modern "sensitive" guys that are doing 99% of the ranting on this subject. It begs the question: Just which pair of their mother's panties are they wearing today ?
Ham Radio started to suck about ten years ago, and it is going to continue the downhill slide. Get tused to it.

And before you start in on me, lemme tell ya fella, i was a cw operator, and i also built most of my own stuff. It just ain't worth it any more. Period.

I guess they've changed the design from the 780 to the current one.

I don't know what's on the AOR end - mini-USB? USB to RS-232
converter? But the price looks like "let's see how much I can get
away with". If someone figured it out and sold them for around $39 he
would probably sell a lot of them and still make money.

I doubt that the CBer would take over on all bands. One of the attractions
of CB is the cost of equipment. The FCC will probably sell off the unused
bandwidths to private organizations such as cell companies and repeaters for
the service industry to name a few. They can then be done with all the
headaches with ham/cb enforcement and concentrate on other, more lucrative
areas, such as Janet Jackson's half time nipple exposure.

I have done, well, over a hundred. It's easy, but you have to be
reasonably good with a soldering iron.

There used to be a site with pics, but it's gone.

The front doesn't come off, you go through the BACK.

First, you take the back case off. Unsolder the center of the BNC
connector. It's sticking up through a hole in the top PC board
Once the connector's center wire is free and clear, unscrew all the
little screws around the outside, and the Top PC board pulls off.
The second PC board unplugs after screws are removed. Then the bottom PC
board is removed, and then you have to unsolder the shield off the back
of the front panel/CPU board. I think there are 4 places to unsolder,
then the keyboard can be accessed. The keyboard just drops out, and the
new one drops in, and it gets put back together.

It's hard the first time, gets easier, to the point it's a 10 minute
job, max. I've replaced my own keypad 5 or six times now. One guy is on
his tenth, and that will probably be the last one, as the 43 is beyond
tired at this point.

If you don't know what you are doing, and don't have a small iron and
solder suckers, etc, don't do it, as I had a whole bag of dead 34s 37s,
39s, and 43s that I couldn't save individually, but was able to
make whole working radios from later on. They were all "donations" from
people who ruined their scanner trying to mod it, or replace the keypad.
(It's the same procedure, to a point)

Good luck..

BDK

Yea there can't be more than $15 worth the materials in the darn things. The ones that the guy on Ebay is selling has a discriminator output and the AORs don't and there cheaper. So I guess that ok. I was looking on line some more and one Co was charging somewhere around $170!!! wow! I hope it comes with Vaseline :)

PS, I love ham radio all over again (missing for 30 years)
I'm building an Elecraft K-2, having a great time. Monitoring the bands
on a Grundig...sounds good to me. Not the same as 30 years ago, but
then again, Frank Zappa is dead, too.

Firefox will handle the link with no user intervention - if you have
the real player installed. If you don't have it installed - or at
least have the equivalent installed - nothing will handle it. There's
no "universal" audio standard yet.

A 1/8" plug? Gee, that's got to raise the cost at least $0.25.

I was thinking that there might be some active circuitry in there. If
it's just 3 connectors and some cable I think you way overestimated
the cost - even if you just wanted to make 1 of them. Look at
<http://www.mpja.com/> or any other junk shop.

It is Thurs, 11:06am EDT (1506z).
"NASA 906," a T-38, has been working over the Shuttle Landing
Facility and has been using freqs 126.65 and 264.8. He has had comms
with "Weather" at KSC, and informed the ATC on 281.425 that he is
"flying a weather chase mission."
The Langley-based "NASA 535" (UH-1H #65-09992) is also in the area,
having landed a short while ago at Patrick AFB.

There is a small circuit in the plug. It makes up the level converter.

I took the online practice test and passed without studying. I do not possess any license, as I have no desire to become a ham. And yes I know what OFF/ON means. I probably know more about theory than most of the trolls on this group. I certainly post on topic more often than most of you. But I can post on topic once a month and accomplish that.

It is Thurs 11:33pm EDT (Fri 0333z).
Very interesting comms right now from Avon Park Bombing Range: a CSAR
training mission is going on.
Moody AFB 347RQW 71RQS HC-130 King 22 is in comms with the
"survivor," BLASTER 22 on 251.9.
King 22 is also up with Avon Range Control on 292.2.
I also am hearing JOLLY 21 in the area and believe they might be
involved in this CSAR.

Four "BAMA" AL-ANG F-16s working Avon Park

It is Friday 10:59am EDT (1459z).
BAMA 11, a flight of four F-16s from the AL-ANG 187FW at
Montgomery-Dannelly Field, is arriving at Avon Park Bombing Range.
They will be working in the Placid MOA; each aircraft will deploy two
BDU-56s. They were handed off from 349.0 to the Range freq 292.2; they
are now up with the Ranger on 285.725. They are also using 141.65 for
air-air, which is a freq they use at the ranges in Alabama.

>>>RADIO SHACK SCANNER SUXS!

In Canada, the " Radio Shack " stores are now called " The Source "
and are affiliated with Circuit City of the USA. They do not sell scanners
anymore...but when they did, many of the better scanners were made for them
by Uniden, but with the Realistic Pro name stamped on them. Some of them
were not junk...

Jack

1963. Ham Survey: How many Appliance Operator classes do we need after code goes away?

Newsgroup: rec.radio.scanner
Date: 2006-06-16 22:28:40 UTC
From: Skip Land <my.mail@skip.land>
Message-ID: <sgGkg.6851$lp.887@newsread3.news.pas.earthlink.net>

We have three classes now, Should we increase or decrease?

I'm thinking we can reduce the number to two license classes:

One class for VHF/UHF so those people can screw up the repeaters, and one with a little harder test that adds HF privileges, for those that want to screw things up world wide.

SL

So which group are you in, 'cause I doubt you have the skills or
intelligence to build your own equipment...Mr appliance operator in denial.

Well, just got a reply from Uniden. "It sounds like you need to send it in
for service. That will cost you $57.95. Have a nice day!"

I guess there's no reason not to pop the cover and poke around now. There's
nothing to lose. I just wish Uniden's customer service was a little more
helpful than "give us some money and we'll just throw a reworked circuit
board in it and call it good."

Patrick AFB Area Log - Fri, 16 June 2006

NASA 950: G-IISP (Gulfstream II) #185, Johnson Space Ctr, Houston.
9:25am: Lands at KSC Shuttle Landing Facility; quite a long while since
950 has been here.
[132.65, 128.55]

CD 241: T-45A, Kingsville NAS TW-2.
9:30am: The first of several CD ### flights; sounds like carrier quals
on the USS Ike offshore Florida east coast.
[267.5 Sealord, 351.8]

FAST 21: F-16CD, NY-ANG 174FW Hancock ANGB Syracuse.
9:50am: Flight of four, working Avon Park Bombing Range, dropping
GBU-12s. Then RTB Syracuse (routing through Savannah airspace), after
week-long TDY at MacDill AFB.
[349.0, 292.2, 285.725, 269.3, 285.65 Jax @ Savannah); 138.3 air-air]

ROMAN 21: F/A-18C, Oceana VFA-106 "Gladiators."
10:00am: First of several ROMAN flights heard today en route NAS Key
West.
[348.7, 319.0]

NASA 944: G-1159 #144, Gulfstream II STA, Johnson Space Ctr, Houston.
10:15am: Departing KSC Shuttle Landing Facility, after the astronauts
worked STA training for the past few days, in addition to the countdown
tests.
[127.2]

BAMA 11: F-16C, AL-ANG 187FW Montgomery-Dannelly Field "Snakes."
10:59am: Working Avon Park Bombing Range, dropping two BDU-56s each;
RTB MacDill AFB.
[292.2, 349.0; 141.65 air-air]

BOLT 51: KC-135R, MacDill AFB 6AMW.
11:07am: Transition.

UNK (Probably ROMANs nearing NAS-Key West).
11:06am: Short comms.
[314.125]

COIL 01: F-15, FL-ANG 125FW 159FS, Jacksonville NAS "Jaguars."
11:59am: Southbound.
[273.55, 380.3]

PAT 756: Priority Air Transport, US Army.
12:00noon: Northbound, direct LaGrange.
[128.425]

6E 161: T-34C, Whiting Field TW-5.
6:40pm: Transition.
[255.4]

He makes the same statement no matter which scanner is being discussed
each time he pulls his head out of his ass - which seems to be once
every couple of weeks.

Depends on what type of connector it has. If it's BNC, yes. If it's
Motorola (car radio type), probably. (They used to have them - I
don't know if they still do.)

I tried online for RS and could not find one with the Motorola
connector for my BC145. I found it on eBay for about $10 including
shipping.
Search eBay for:
DESKTOP SCANNER ANT UNIDEN/BEARCAT SCAN-2
There are some for $7.50 plus $1.50 for shipping. The seller is
medlinradio. He shipped promptly.

Cheers

King 76 photos KSC airspace violator

It is Monday, 12:04pm EDT (1604z).
King 76 has just landed at Patrick AFB after participating in an intrusion incident over KSC. He was in comms with Cape Control on 264.8 after Cape Control attempted to contact an aircraft that had invaded its airspace. Cadets aboard King 76 were able to photograph the offending aircraft; and King 76 informed Cape Control that they would email the photo to the Cape today.
The offending aircraft was N5472U (Cessna 210), which is registered to South Carolina. A couple of years ago when I heard him in the area, he was registered to SC Law Enforcement Division. I guess this would not be a good time for a QSL card.

New mission saves Cannon AFB
Source: AP

CANNON AFB, NM -- Cannon AFB, recently targeted for closure, will become a special operations base, Pentagon and elected officials announced this morning. Cannon will become the Air Force's 16th Special Ops Wing within the next two years, US Sen Pete Domenici, R-NM, said.

The federal Base Realignment and Closure Commission last August accepted the Pentagon's recommendation to send Cannon's three F-16 fighter squadrons elsewhere. But the panel stopped short of closing the eastern New Mexico base. Instead, the commission turned Cannon into an enclave, keeping it open in a much-reduced form while the Defense Department looked for another mission for it.

The Pentagon had recommended closing the base as part of an effort to streamline the nation's military complex. But commissioners said Cannon was valuable and could have a future use.

Date: 2006-06-21 18:06:30 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <yfGdnX-oANI1FwTZnZ2dnUVZ_t6dnZ2d@comcast.com>
Source record: 8675

Hello:

For anyone with the new Uniden 996:

Book isn't too clear on this.

If I use the 9-Pin 232 port on the rear to connect to my PC, do I
need a null adapter ? Again, this is the connector on the back of the case.

The book seems to imply that one is required, but my old 780 did Not.
Would be surprising, I think, if the 780 didn't, but this one does.

Any info. would be much appreciated.

Thanks,
B.

If you use the front port on the scanner, and the supplied cable, that's all you need. If you want to extend that cable, it's a straight-through serial cable, not a null-modem cable.

However, it is my understanding if you use the port on the rear of the 996, that will require a null-modem cable. This is different from the 780, and 796D.

The 996 has two RS232 serial ports! The one on the back is a DB9 male. The one of the front is a very small "Uniden" style serial port, and a cable is included with the scanner to fit this port, and it gives you a standard DB9 female on the other end.

The connector is for a GPS receiver, not a PC connection. The PC
connection is the little one on the front panel - the one the supplied
cable plugs into.

2000. To Mr. Klein From OP: Re: For Anyone With The New Uniden 996 (null adapter question)

Source record: 8680

Hello:

Thank you very much for help.
Sure is a lot to know with this.

Are you "sure" that the rear connector, in addition to the GPS usage, isn't
also structured
for connecting to the PC, if desired rather than the front panel connector ?

My understanding was that you could use either, but if using the rear, a
null modem cable was probably required.

Not at all sure,though, and the book really doesn't describe this very well.
Any other thoughts on ?

Can I ask you one other, pleae:

I downloaded the UASD software and got it installed with the Key, I believe
O.K.

But, there's now a Folder on my Desktop labeled BCSS.
I used all of their default locations, and didn't change any.

Where should this folder actually be located ?
When I put it where you suggest, should I just put the complete folder
there, or only the contents of it ?

Thanks again,
Bob

A gender changer, definitely. A null modem, probably. But I see no
mention of using the rear port to connect to the computer.

BCSS is where the installation program gets unzipped to. I doubt it's
even needed after you have the program running.

The connector on the back is not limited to GPS use. It is also used for
cloning one 996 to another.

I think if you read the post literally,he's saying that listening to
military radio on a scanner has nothing to do with scanners. Huh?

NASA aircraft busy today over KSC

Lots of NASA acft have been up today.
NASA 926, the WB-57F high-altitude research aircraft is up
rehearsing his role in Saturday's Space Shuttle launch, where he will
take pictures of the STS after launch. NASA 926 departed Patrick AFB at
10:05am this morning and quickly went into a spiraling climb to reach
his FL480-FL510 block.
NASA 926 has been in comms with the ground on 253.6, IDd as
"Primary," and on 270.0, IDd as "Backup."
The two STAs, NASA 944 and NASA 946, were also up and worked the
airspace over KSC, making steep dives onto Rnwy 15 to simulate the
Orbiter's landing profile.
I also heard NASA 4 depart Patrick AFB at 7:09am this morning; I did
not catch his destination.
NASA 908, NASA 960 and NASA 912 were also heard. NASA 960 arrived and
landed at the Cape Canaveral AFS Skid Strip instead of at the SLF.

Phony's can ignore. This question doesn't apply to no-codes.

Nickle Generals and Extras:

If the 13 and 20 wpm CW exams came back and you had to pass the proper code exam for your class to renew, 13 wpm for general, 20 wpm for extra, would you renew your license?

Yes to the Extra part. I have been trying to get to 20 wpm all my life
and I continue now. It has never made anymore sense to me than a
requirement to be able to run a five minute mile. 16 wpm seems to be
the fastest code I can differentiate with my ear/brain connection.

If the code guys need a special chunk of the band to operate high
speed code they can petition for it. My hat is off to those who have
both the code skills and the technical skills to be superior to me on
any subject.

However, I am embarrassed as a long time Ham by those who would deny
the hobby to anyone without Code skills.

I believe the ARRL offers Award Certificates to those who can achieve
the higher speeds.

Thanks for the opportunity to speak out. Another characteristic that
earns no respect from me is the matter of remaining anonymous on the
Internet. I expect that your CB handle is something like "Bad boy" or
"Rain Brain". If you were not a troll by choice you might be able to
make a positive contribution some where.

USCG Range Control heats up at KSC preparing for STS-121 Launch
---

It is Sat, 4:29am EDT (0829z).
USCG Range Control has been busy for the last hour or so. They have
been in contact with several USCG assets, as well as several CG
Auxiliary vessels. They have also been in contact with CG Sector Jax.
Comms are continuing steadily.
Here is a summary:
Range Control with CG Sta Port Canaveral on 157.075.
Range Control with Bear Cove on 157.075.
Range Control with CG Sector Jacksonville on 157.1.
Range Control with CG Cutter Dolphin on 157.075:
Dolphin passes Ops Normal and position
"on station"; will monitor Ch 81.
Range Control with CG Cutter Shrike on 157.075:
Shrike passes Ops Normal and position;
Range Control asks sea conditions.
CG Aux Vessel 332 on 157.075.
CG Aux Vessel 522 on 157.075.
CG Aux Vessel 639 on 157.175.
CG Aux Vessel 6048 on 157.175; also warns private
vessel on 157.05.
CG Sector Jacksonville on 156.8 making
announcements regarding the boundary of the
Launch Hazard Area at KSC.
CG Station Canaveral on 156.8, 157.075.

Well, Slow Code, I'll give you a straight (and I hope friendly) answer to your question. I'll then give you a straight (and I hope not-unfriendly) explanation as to why I believe people are calling you a troll.

The first answer: well, I think I'd certainly *try* to renew my license. My CW is distinctly rusty - I use it only rarely, and I'm not sure I've ever managed to copy 13 WPM (let alone 20) well enough to pass the one-minute-error-free barrier, or be able to answer the necessary number of questions. So, it'd take a bunch of listening and practice to reach that level.

I'm not sure I have enough time free to do it. I've got a busy life, work full-time plus a bit, and much of my ham-radio playing time goes into other areas of the service (I'm an ARES/RACES AEC for my city, a mutual-aid comms responder for the county, and I've put in a huge boatload of hours over the past couple of years helping redesign and rebuild and debug the local hospital's repeater system). Getting really serious about doing high-speed CW would consume a lot of time, which would necessarily subtract from my ability to (e.g.) spend many hours of circuit analysis and modelling and experimentation to figure out why the fancy commercial repeaters we bought had such lousy-sounding audio (turns out the designer had mis-used the discriminator IC, forcing it to "clip" the signal internally, *and* had messed up the design of the de-emphasis network.)

And, I have no assurance that I'd ever reach that level. As several other people have commented, it's perfectly possible for people to work, hard and honestly, at copying CW for years, and never be able to reach the 13 WPM level. I strongly suspect that to some extent, CW-copying is tied to certain sorts of neurological organization in the ear/brain system - some people may be born with more potential ability to handle high-speed CW than others. Effort or no, some people seem unable to learn to copy CW at all, others can do so but never become very good at it, and *many* people report hitting the "13

WPM wall" and never being able to copy reliably at rates much faster than that.

Now, in your previous epistles on the subject, you and your nym-clone were advocating not only requiring testing for 13 WPM (General) and 20 WPM (Extra), but also making the no-code license a one-year nonrenewable. If that proposal were accepted, there's a strong possibility that I'd end up being kicked off of the air the next time my license came due... either because I was unable to push up to 13 WPM no matter how hard I tried, or because I'd devoted my time to other aspects of ham radio and hadn't taken time to study-up.

So - that's my answer. I might end up being able to renew my license (although probably not at the 20 WPM level), I might fail the CW test, or I might just decide that the "old boy's club" had made it clear that they didn't want anybody other than rabid CW operators on the air, and decide to go do something else productive with my time.

Now - that being said - let's address why you were being called a troll. I think it's because it's quite clear to people reading these threads that you have a serious agenda, sir. You've made several attempts (apparently under several posting IDs - some refer to these as "sock puppets") to drum up support for your CW Uber Alles rules change proposal. You've scoffed at, or simply ignored, the many people who have pointed out that your proposed changes are 180 degrees out of phase with the international trends (i.e. the WARC rules), and with the FCC's publicly-stated feelings on the matter, and that your proposals are essentially equivalent to ones which have already been ruled out by the Powers That Be.

In short, the "what if?" question you asked is entirely hypothetical. There's just no chance at all that the FCC would enact the sort of CW-centric licensing rules you have proposed. Ain't gonna happen. Your asking questions about "well, if it _did_, what would you do" is probably part of why you're being called a troll.

Numerous people have responded to you, expressing their opinions that your rules would decimate the ranks of amateur radio by forcing off of the air a large percentage of today's licensed operators. Your "friendly question" seems to be intended to try to address that question, but you phrased your inquiry in somewhat-loaded terms, and in a way which almost guarantees that you won't receive an accurate and unbiased set of answers which actually represent the feelings and opinions of this newsgroup's readers.

To sum it up, your way of presenting your agenda probably leads people to believe that you aren't serious about debating or discussing the issue... and that's probably another part of why you're being called a troll.

I agree with you that the Amateur Radio Service (and hobby) benefits greatly from being hams to like to study, learn, advance their skills,

and use what they know. That's one of the specific purposes of amateur radio here in the U.S., and I think it's great.

I *disagree* with you that the ability to learn to copy CW at 13 - 20 WPM is, or should be, the "litmus test" which decides whether a person is Worthy of being a ham.

Your fixation on CW is, I think, actively interfering with your ability to support ham radio by promoting *all* aspects of technical and operational learning. I believe that your attitude hurts ham radio more than it helps.

That's my $0.05 worth, adjusted for inflation. Take it for what it's worth for you.

[and, I'm sorry to say, based on your past postings I don't really expect you to address the meat of what I've said. I expect that you'll toss off a one- or two-liner, dismiss what I've written, and keep on as you have been. I'd be pleasantly surprised to be wrong about this!]

The hobby is almost dead anyway,nothing is going to save it. No one
cares about Ham radio.Most people under 30 have never heard of it and
don't care. All they want is their cell phones, Ipods,etc. The FCC
can't save it by changing anything.

NASA Vessels up on 5711 kHz USB
-------------------------------

It is Sunday 10:09am EDT (1409z).
The NASA SRB recovery vessels "Liberty Star" and "Freedom Star" are
up on 5711 kHz USB, in comms with Cape Radio. Cape Radio tried to QSY
them to HF freq 9132, but even though I heard both sides well, Cape
Radio could not hear them. It seemed like the vessels could hear Cape
Radio, however.
Unfortunately with the weather here so bad, it is doubtful the
STS-121 launch will take place today, so the Liberty Star and Freedom
Star will have to wait another day to retrieve solid rocket boosters.
They feel like The Butcher does when I toss his frisbee and it gets
caught high in a tree.

I am in a rural area that is quite hilly, and would appreciate any suggestions on a scanner that would work well there. I am in northeast PA, am about 8 miles from the nearest fire station, and 8 miles the other direction to the nearest police station. I've seen scanners that make it to 512mhz (older, like the PRO 2023, BC145XL), and ones that make it to 956mhz (within 10 years old, like the PRO 2008,2050, BC800XLT).
Are there any benefits by having the "extra coverage"?
Are most reporting stations up this way (NEPA, NY southern tier) trunked?
I want to get the best coverage I can get, but don't want to pay hundreds of $ for this. My budget is probably around 60. I'm just looking for something where I can hear the latest on police action, road closures (I'm in the area that really got hit by the floods of last week)- ones that PennDOT didn't report (there are lots of them).

thanks for your help, I appreciate it.

Dobs

Dobs,

I tried e-mailing you, but your address bounced. I would prefer a money order and I would ship within 24 hours after receiving the funds. I'll ship via USPS Priority Mail. Sorry.....I have to stick with $85.00 plus shipping. This radio works perfectly in all functions. I just have too many scanners!

If you want to receive something on 800 MHz, a 512 MHz scanner won't
do it. Otherwise, unless you need the extra features that newer
scanners offer - trunking, fire tone out, Wx alerting - no.

>Are most reporting stations up this way (NEPA, NY southern tier)
>trunked?

"Reporting stations"? Go here
<http://www.radioreference.com/modules.php?name=RR&stid=42> and check
out the area surrounding you. I have no idea what county you're in or
which ones are near you.

>I want to get the best coverage I can get

The antenna and cable, not the scanner, determine the coverage.

> but don't want to pay hundreds of $ for this. My budget is probably around 60.

That's minimal for an antenna. Figure at least another $50 for an old
used, but working, scanner. And, depending on the exact terrain and
the frequencies you want to monitor, the antenna that will work for
you might set you back a few hundred dollars.

I'm just
>looking for something where I can hear the latest on police action,
>road closures (I'm in the area that really got hit by the floods of
>last week)- ones that PennDOT didn't report (there are lots of them).

According to Radio Reference, "Almost ALL PennDOT District's have
moved all operations to the statewide MA/COM OpenSky 800 Mhz system".
That's an unmonitorable system. There's no scanner made that can
monitor it - for any money. (Unless you want to bribe someone in some
secret government agency.)

You can monitor PEMA
<http://www.radioreference.com/modules.php?name=RR&aid=1262> and the
state police

<http://www.radioreference.com/modules.php?name=RR&aid=744>.

Again, the antenna (and cable - the lowest loss
<http://www.ocarc.ca/coax.htm> you can afford) will determine what you
can hear.

http://www.strongsignals.net/access/content/scanrbrf.html
PRO-2004: 1986 vintage. Top of the line, wide band scanner
for 1987. After a diode is cut, enjoy continuous coverage
from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300
channels in 10 banks of 30, backed up by conventional 9 volt
alkaline battery. Any channel can be designated the
priority channel. Scans and searches fast. Lots of well
designed features, like 10 pairs of search limits, Lockout
Review, default search increment and emission mode. Sound
Squelch allows skipping dead carriers during search or scan.
Metal cabinet, good internal construction and shielding, but
no mobile mounting bracket or DC power cord. Soft touch
membrane keyboard. Good sensitivity and selectivity. Very
good radio. See "Product Review: The Radio Shack PRO-2004
Programmable Scanner," by Bob Parnass AJ9S, in The Radio
Enthusiast, February 1987, and Monitoring Times, March 1987

I bought one when they came out. Nice scanner. Possible to overload
the front end with overly strong signals, with a big antenna, notch
filter can help.

Bob Anderson*Bitwisebob

Bob,

Here is some information on the PRO-2004. It's not a trunking scanner, but most scanners don't cover the military aircraft band and cellular phones. As far as it working "in the hills", it all depends on what antenna you use.

Frank

PRO-2004: 1986 vintage. Top of the line, wide band scanner. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Sounds like they're proceeding with tomorrow's launch attempt, but
will be trying to get a better look at the cracked foam area and make
sure there's no ice formation there after tanking.

Yup, I stopped at the Advanced and then the code requirements for Extra
were lifted. So there I stopped. Might do it anyways for the extra few KC
the license grants me.

Hi All.
I have a RS PRO-97 scanner and trying to enter a group of trunking
frequencies. When I enter them just the way the book says and hit scan it
goes to one channel and just buzzez. It just seems to be in regular scan
and not trunktracer mode.
The system I am putting into the scanner is an EDACS 800MHZ trunking system.
Any help is appreciated.
George-NY

You REALLY need to use the WIN97 software. Programming a trunking system by
hand is almost impossible,
Are you trying to do Port Authority or Nassau?

Are you sure that all the channels AND the bank are set to EDACS? And
that the frequencies are in the correct order (which wouldn't give you
the problem you have, but would give you a problem)?

STS-121: Saturday pre-launch activities have begun

It is Sat, 7:34am EDT (1134z).
Range Clearance activities have begun here in the NASA-KSC area, in preparation for the Space Shuttle STS-121 launch planned to take place at 2:38pm EDT (1838z) today.
"USCG Range Control" has been up on 157.075 getting ops and position from various CG assets, including "CG Bear Cove" and "CG Vessel 438."
"CG Station Canaveral" has been up on 157.175, in comms with CG Auxiliary vessels, incl "CG Vessel 2787" and CG Vessel 1747." He is also in comms with "CG Vessel 25442" on 157.15. And he is talking with "CG Cutter Kingfisher" and with "CG Vessel 301" on 157.075.
In addition the Combat Air Patrol is active over KSC. Eglin AFB F-15s "ARROW 45" and "ARROW 46" as well as "Tanker 11" are up with Miami Ctr on 343.7; and they are engaged in air-air comms on 252.0.
At the moment ARROW 46 is getting topped off by Tanker 11.
Lastly "Search 01," one of the NASA UH-1H helos, has just departed Patrick AFB, switching from the tower freq 133.75 to Cape Control freq 133.8, to begin his mission over the Cape.
As for HF comms, there have been test comms on the Solid Rocket Booster ships' freq 5711.

2086. Re: Shuttle Frequencies

Newsgroup: rec.radio.scanner
Date: 2006-07-04 13:57:01 UTC
From: Scott Daniells <no.thanks>
Message-ID: <14idnWVfJZMy7jfZRVnyjQ@bt.com>
Source record: 8564

Try the following frequencies. They are used from when the crew enter the shuttle until about 2 hours after launch, and again from 3 hours before landing until they finally land.

259.7 (AM) - Shuttle Air-Ground Primary - This is the only frq I've heard the shuttle on out of the Standard shuttle FRQs but it's worth monitoring the others too
296.8 (AM) - Shuttle A-G Backup and also Orbiter - Suit during spacewalk
279.0 (AM) - Shuttle A-G Backup and Suit - Suit and Suit - Orbiter

I've also been recommended to listen to 251.875

I've heard discovery trying to contact ISS on their frequencies while on orbit before... so worth checking these:

143.625 (NFM) - VHF1
130.167 (NFM) - VHF2
121.75 (NFM) - Low Power backup
139.208 (NFM) Backup FRQ for VHF 1 but I've never heard it used

The Kvant System on ISS uses the followinf frequencies and is occasionally used for voice downlink according to some lists:
922.76 (NFM)
768.975 (NFM)

Sounds like a Netscape problem. Works fine here in Safari.

Mike

I always liked the idea of the 13/20 wpm requirements because it did push us to greater heights of achievment.

Some want to be Doctors and some want to be rice pickers. That should not be taken away from us. In one country I recall, it was mandated that ALL would be rice pickers at the barrel of an AK47 by sadistic nut jobs with a grudge against achievers. Of course the result was 2 classes: The bullies and the rice pickers. Perhaps the bullies had little regard for anything but rice and violence.

Mastering the code and advancing in speed requires determination and control of ones emotional state to allow the information to flow. This is very difficult for beligerant people to do, so they complain, bitch and cajole rather than just doing what needed to be done. As for the technical requirements. Not enough. Even beligerant people can learn to field strip a rifle.

One of the greatest mistakes people make is to try to analyze and manage things beyond their control. The ear/brain thing people are talking about is irrelevant.

The process is there if you let it happen. Designed by The Creator. Forget about concentration, forget about analysis. How many of you really think about all the connecting tissues that have to be pulled in order to just walk? Just start writing down on paper what you are hearing. Don't think about it at all. Above all find the peace to release the anxiety of missing a word or character and just continue. This is where the self-control comes in. Soon you will find the errors less and less and you will be able to fill in the missing characters and words by memory.

Find the peace of Jesus and all is yours.

```
C-130s using freq 9132 kHz USB for STS-121 support
--------------------------------------------------

It is 12:58pm EDT (1658z).
C-130 "King 1" (YL voice) just came up on 10780 kHz USB with "King 3"
who requested the working freq. King 1 passed the freq 9132 kHz USB.
As I type this King 2 is up with Cape Radio on 9132.

AL STERN Satellite Beach FL
http://groups.yahoo.com/group/FloridaMilcom/

That is why I have always proposed that licenses shouldn't be
automatically renewable. When a license expires or is just about to
expire the ham must retake and pass all exam elements required for that
license class before it can be renewed again.

99% of the hams on usenet hate my proposal. They think you shouldn't have to be proficient at anything to have a ham radio license. I think the reason all this came about was after ham radio was dumbed down by restructuring alot of CB'ers were able to get licensed and oppose anything that might required you work to be proficient and valuable asset to the service.

I know you're right.

Hams just want to be appliance operators these days and they don't want license exams that will interfere with them getting to those appliances even though it means being less worthy. I don't see anyone modernizing like everyone says is happening. They just get their licenses and grab a microphone. What percentage of hams have a computer connected to a radio? Probably less than 30%. Hams don't want to modernize. Guess we just have live with inferior operators on the bands from here on out. Then again, maybe hams shouldn't be required to be knowledgable or have skills. Requiring skill and knowledge is too old skool. Everything must be outcome based these days, even licensing. It ain't like we have to help out in emergencies or anything. Thanks Dave, I hadn't thought about it like that before.

Just exactly what are you trying to babble out now? Having more qualified
hams will kill the service? An amateur radio license isn't worth enough
that you should have to work for it? License candidates are lazy and
won't work to get a license?

Please babble to us how requiring more proficient amateurs will kill ham
radio.

You can add 145.800, the downlink frequency for amateur radio
communications from the ISS.

Nonsense. That's an illogical conclusion on your part, and _not_
something which has been stated, or can reasonably be inferred from
the postings that I have seen in these threads.

Hell yes!! When I first got my 246 and was trying to program it, I had the computer on with the manual, the manual that came with it open, and a couple times I got it so screwed up I had to delete the entire system I was trying to program and start over. It was completely different from the Pro-95 I learned on so it was all new again almost.

Report #J06-075
NASA TV AND WEB COVERAGE OF SHUTTLE DISCOVERY MISSION

NASA is providing round-the-clock television and Internet coverage of Space Shuttle Discovery's ongoing mission, STS-121, to the International Space Station.

NASA Television features live mission events, daily status news conferences and 24 hour commentary. NASA TV is webcast on the Internet at:
http://www.nasa.gov/ntv

NASA web coverage of STS-121 includes the latest mission information, interactive features and news conference images, graphics and videos. The latest NASA TV schedule of mission coverage also is available on the main space shuttle Web site:
http://www.nasa.gov/shuttle

The daily status news conferences with STS-121 mission managers take place at NASA's Johnson Space Center. Reporters can ask questions from participating NASA locations. Please contact your preferred NASA facility to confirm its availability.

For information about other NASA missions and activities, visit:
http://www.nasa.gov/home

OK then, Since we all want to be proficient, how about this:

Step 1: No more automatic renewals. Individuals must retest and pass all elements required for their license class.

Step 2: The passing score for written exams needs to be raised to 85%.

Step 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

Step 4: Make the no-code license one year non-renewable.

>or something?

The claim was "more proficient", not "generally nicer and better able
to get along with people". There will always be idiots in <insert any
field> but a ham who can't copy code at 1 wpm isn't more proficient
(or as proficient) at communicating under any and all conditions as
one who can.

Someone who can do something is, by definition, more proficient at
doing it than someone who can't. Requiring code tests and real
technical testing (the current tests are a joke) makes sure that most
of the people who get licensed are more proficient at receiving code
and with technical matters.

no it does not

most of the people that get license tody never take a code test

therfore they are not made more profeincent at Morse code even

you "facts" are well... fucked

No, it's your ability to understand the difference between "are
licensed" and "get licensed" that is.

Al, someone who passes a code test should be more proficient in code
than someone who cannot pass the code test. That simply makes that
person proficient in code, not necessarily a more proficient operator.

You may be able to use the code, but if you cannot use modern digital
methods, use sat communication, able to handle emergency communication,
able to set up digital networks and use them effectively, build modern
solid-state equipment, etc., then you are not a more proficient amateur
operator, you just are more proficient in code and that is not going to
help us much in the 21st Century.

As I said before, PSK31 can be copied when the human ear cannot even
hear the signal, if you cannot hear code, you cannot copy it period. So
code is no longer the be-all-end-all. Modern 21st communication methods
have replaced it.

If we are going to attract new people to the service, we need to get
into the 21st Century and get the old farts away from the old code and
tubes crap.

should be? I beg you pardon

well I know can't pass a code test and I can use Morse code did a few
eme contacts using a spectrograph to make out the didt and dah and
feedto an pc for translation I have done the same (with code reader as
well) to see if I could do that made a sweep in a cw sweepstakes (with
aid of another hams call)

Ok I have a question not sure if anyone knows about this but thought i would like to ask anyway. I have a scanner it has a 2 way capabileity. Its a Motorla Radius cp200. I want to be able to add frec to it myself, so I can monitor chanels. Now I can only take it to the guy a factory rep and he can add or delete it. I asked him if i could do it myself and he said no cause if i could i could use other frec and disrupt others. I dont want to change the 2way frec just add some frec so I can hear others. So if anyone knows about this I would like to hear about it. Thanks up front

If they are proficient in code as well as other modes, then they are a more proficient operator. The more you can do, the more proficient you are.

> You may be able to use the code, but if you cannot use modern digital

Setting up digital networks may not be particularly practical in the early days right after a large scale disaster. Satellite passes are short and if you don't have internet access to look up pass times, you may be up the proverbial creek without the proverbial paddle if you rely too much on that form of communications. Even with the pass info, the passes are too short to be useful for handling very much emergency communication.

> As I said before, PSK31 can be copied when the human ear cannot even hear
> the signal, if you cannot hear code, you cannot copy it period. So code
> is no longer the be-all-end-all. Modern 21st communication methods have

>

Yes it is true that PSK31 can be copied when you cannot hear it. However, it is useless when there are ionospheric disturbances that cause phase shifts (solar flares with the attendent aurora come to mind). This happens on a fairly regular basis. In addition, although the signal you are putting out is low power, PSK31 has a fairly high power consumption requirement since a computer is essential in the system. If you have limited power resources, it may not be a wise choice.

While code is not the end-all and be-all, it still has its place in list of communications methods. Let us go back to the auroral activity. The various digital modes fail first. Voice holds up a little bit longer getting distorted but sometimes still copyable. Code holds up a bit longer, being still copyable when voice becomes too distorted. Under auroral

conditions, both voice and code fare better than digital.

Every single method has a valid place in the list of communications methods. Every mode has its strong points and its weak points. In my opinion, hams should be able to use as many modes as possible and that includes code.

The major drawback to code is that it requires people to develop a skill rather than being a matter of just slapping parts together. Heck, I don't any skill in soldering as I've soldered only about 4 items in my life but I built both myself and my OM PSK31 interfaces in about 1/2 hour each. They were two of those four items.

> If we are going to attract new people to the service, we need to get into
> the 21st Century and get the old farts away from the old code and tubes
> crap.
>

I find that it is the "old farts" who are doing most of the exotic activities. When I work PSK31, I come across many seniors working this mode with the latest radios and computers. When I work VHF/UHF contests and look up the call signs afterwards, it is mostly the experience hams that I run across.

You have let your disdain for the code blind you to its merits. As I stated above, EVERY mode has its strengths and weaknesses and its place in wireless communications.

Dee, the issue is that many old hams know CW, but cannot operate most new digital modes. But if I understand what you are saying, if a 20 WPM Extra Class ham only operates CW and maybe SSB is less proficient than a 5 WPM Technician that operates on 10 different digital modes. See the 10 modes is more than CW and SSB, that ham is more proficient. Then I guess I agree with you.

Your comments on setting up networks, sat communication, and digital modes show that you have little knowledge on either. For instance, it depends on the sat orbit how long it is useful.

If PSK cannot be used due to ionospheric disturbances, well then either can CW. Computers can be operated on battery or generator. You are going to need something to power the radio right? Does not take much more for a laptop and with digital modes, the power can be much less so there is more power for the laptop.

Your comparison of voice, digital modes and CW shows you have little knowledge of what you are talking about. I have personally used digital modes when voice and CW were not able to be copied.

Finally, I happen to like CW a lot. But I don't think it makes anyone a better operator for knowing it, you should not be tested on it anymore than any other mode. Yes, there are a lot of seniors using digital, but there are too many more hanging on to the old crap CW only and tubes.

The original claim wasn't that it makes him more proficient in
everything, just that it makes him a more proficient operator. Being
equal in everything else, but more proficient in code, makes one more
proficient.

Is logic a lost art?

>You may be able to use the code, but if you cannot use modern digital

And, if there's effectively no testing, which is the current case, how
do you propose that we get operators who CAN "use modern digital
methods, use sat communication, able to handle emergency communication
...", etc? Wishing makes it so?

>As I said before, PSK31 can be copied when the human ear cannot even
>hear the signal, if you cannot hear code, you cannot copy it period.

CW can be copied below the noise. Whether it can be copied as far
below the noise as PSK31 can is a good question. With the amount of
experience I have with both modes, I think I can safely say that CW
can be copied further into the noise than PSK31 can. (You need SOME
detectable original signal for PSK31 to work - after all, you have to
be able to detect the phase shift. CW can be copied even if it's
nothing more than modulated noise. And, if there are any old sounder
operators left, even key clicks can be copied.)

> So code is no longer the be-all-end-all. Modern 21st communication methods
>have replaced it.

It never was all there is, but let's see you use "modern 21st
communication methods" in an emergency situation when all you have is
a source of RF - nothing to modulate it with. Going to yell at the
oscillator and hope it's microphonic enough to produce some NBFM?

>If we are going to attract new people to the service, we need to get
>into the 21st Century and get the old farts away from the old code and
>tubes crap.

They said that in the 50s too - "we have modern communications like
SSB - who needs CW?" ... yet CW still lives. I doubt it'll be a
requirement in 100 years , but I also doubt that no one will be able
to copy it.

Thanks for the memories. I enjoyed "the barrel" in the late '50s. No
one who works voice on aurora will ever forget what it sounds like. Or
forget working half-way across the country with 5 watts on 6 with a TV
antenna.

>The major drawback to code is that it requires people to develop a skill
>rather than being a matter of just slapping parts together.

The problem is that a lot of people think that all the "skill"
operating takes is being able to turn the equipment on. Even using an
appliance rig, it's easy to tell the appliance operators from those
who have developed some skill.

It's not a scanner, it's a two way radio. If you want a scanner, buy
a scanner. If you want to program the radio yourself it's going to
cost you more than buying a scanner.

>I dont want to change the 2way frec just add some frec so I can

And many of us know CW, originated some digital modes (you think
teen-agers invented everything?) and can certainly operate most, if
not all, of them. We had working RTTY (that's digital) regenerating
repeaters (thanks, Norm) before most current hams were even born.

>If PSK cannot be used due to ionospheric disturbances, well then either

Not true - the human brain is a more efficient detector than a
computer sound card in some cases.

>Computers can be operated on battery or generator. You are

You can get a CW signal to anywhere in the world with a 9 volt battery
for a few hours. You can't run a pocket PC on that kind of power.

>Your comparison of voice, digital modes and CW shows you have little
>knowledge of what you are talking about. I have personally used digital
>modes when voice and CW were not able to be copied.

And I have personally used CW when digital modes weren't even
detectable, let alone copyable. So have many people who have used CW
for extremely low signal work. Try decoding a PSK signal that's been
bounced off an aurora. (The phase is constantly rolling - there's
nothing for the detector to detect.) Aurora CW sounds weird (okay, it
makes "weird" boring), but it's easy to copy.

>Finally, I happen to like CW a lot. But I don't think it makes anyone a
>better operator for knowing it, you should not be tested on it anymore
>than any other mode.

Okay - the same then. You're tested on your ability to understand
English, and to read the written word - that covers voice and digital.
Let's test for CW. Not "more", just "same".

> Yes, there are a lot of seniors using digital, but
>there are too many more hanging on to the old crap CW only and tubes.

And too many youngsters who think that it it's old it's automatically
crap.

which is an admision that it is proper for it to be the be all and end
all of of testing for hf
It just that simple
the merits of the mode do not justify its placee as more important
than the rest of Ham knowledge combined

this must change

it will change

you have may call on it

You call that cheap ?
Get real. Add shipping and save a whopping $15 for a used item.
Ohhh break out the champagne.
And a freind "gave you a cable", so now here you are, trying to fleece some poor sap for a bundle of wires sheesh.
Hardly anything you buy anywhere would you get much more than half for.
Sell it for $9.99 delivered and I'll take it, even though I don't even have an AR8200.

I still hold to the belief, claim, whatever that knowing CW in itself, does not make an operator more proficient in anything but CW. I would even submit that some operators who only use CW are less proficient operators than a modern ham who uses many more modes and methods, including modern digital modes, to communicate. Follow the logic Al. Someone who is versed in more facets of Amateur Radio than simply CW is a more proficient operator. Yes, I guess you are correct, logic is a lost art.

> methods, use sat communication, able to handle emergency communication
> ...", etc? Wishing makes it so?

No, desire does. Every amateur has their niche that they want to pursue. Forcing a CW test on someone does not make them have a desire to use it. In fact, forcing someone to test on an archaic mode of communication may in fact keep them away from the service and therefore they will never develop an interest in learning and using modern communication methods.

Al, you seem to have trouble reading. I never mentioned copying below
the noise level. What I said was CW cannot be copied if the human ear
cannot hear it. I have copied PSK when the audio of the signal could
not be copied by the human ear. It's just that simple. All the BS
about CW being the only true weak signal mode is well just BS. There
are superior modes to CW and PSK is one of them.

Yup, if all you have is a source of RF and nothing else, I guess you are
screwed. But that is not reality. You would have a real problem if you
did not have a source of RF, gee Al, let's call it a transmitter and use
big people words. I wonder why NASA does not have CW capability on the
Shuttle and Space Station - you know, just in case. Why have our armed
forces stopped using it? What happens in war if all they have is a
transmitter? Get real.

Yup CW still lives and it will go on for quite awhile. Forcing people
to learn and use it is not the way to keep it going. It probably won't
be a requirement in 5 to 10 years. I guess that is just evolution. Out
with the old and in with the new.

Next you'll tell us that the sun rises in the East. Thank you,
Captain Obvious.

Knowledge of any single thing doesn't make an operator more proficient
in anything but that one thing. Should we have testing in TV
techniques, simply because it's a "modern communications mode"? How
about microwaves? Programming? Hey, there's one I'd go for. Let's
be "modern" and make sure that hams can program the computers they're
using for "communications".

> I would even submit that some operators who only use CW are less proficient
>operators than a modern ham who uses many more modes and methods,

And I said it can, so who has the problem?

>I have copied PSK when the audio of the signal could not be copied by the human ear.

And I have copied CW when there wasn't enough signal for a computer to
copy PSK.

>It's just that simple.

It sure is.

>All the BS about CW being the only true weak signal mode is well just BS. There
>are superior modes to CW and PSK is one of them.

No one said that CW is the only weak signal mode, but it can sometimes
be copied when it's weaker than any other mode can be copied. If the
noise frequency is higher than the bit frequency ... well, you know
weak signal analysis, right? Or you wouldn't be discussing it, would
you?

Oh, but CW takes MUCH less power for the same path than any digital
mode, and CW is the ONLY mode you can use when the only thing you have
is a source of RF.

>Yup, if all you have is a source of RF and nothing else, I guess you are
>screwed. But that is not reality.

Until you have a radio with a broken voice or data circuit and the
only thing standing between you and safety is your inability to
communicate because the radio's broken.

>You would have a real problem if you
>did not have a source of RF, gee Al, let's call it a transmitter and use
>big people words. I wonder why NASA does not have CW capability on the
>Shuttle and Space Station

Excuse me? They sure do.

>Why have our armed forces stopped using it? What happens in war if
>all they have is a transmitter? Get real.

You're comparing military intelligence to actual intelligence? They die. Soldiers have been known to do that in combat. The prime mission of the military in wartime is NOT saving the lives of individual soldiers, it's winning wars at the COST of the lives of individual soldiers. Why don't YOU "get real"?

>Yup CW still lives and it will go on for quite awhile. Forcing people
>to learn and use it is not the way to keep it going.

Neither is forcing them to learn electronics. Or the laws they're going to have to know. Let's just post ham licenses in stores and people can pick them up if they like. Just like they used to do with CB licenses. Why keep anyone from having access to a public property? Just let anyone buy a radio (no knowledge of how to even build a kit should be required) and use it. Those of us who want to learn something can petition for a new service that requires actual knowledge of something.

you are the one that failed the class

I did not

CW currently stands as more imprtant than the rest of HAMradio combined
for HF access

CW is not anyway near that valuble

therefore the current testing system is ilgoical

BTW to answer your red herring from another thread No one is proposing
adding a test on digital mode

I am a new ham and will respond to this based on being new. I got my license last year at age 48 so I'm neither a kid nor a senior. I've been tested and scored at 136 so I'm not a genius but am far from a dummy. I mention these things to give a general picture of who I am and where my position comes from.

Radio Buff wrote:
>
> No more automatic renewals. Individuals must retest and pass all elements
> required for their license class.

Although I see the reasoning behind this request I disagree. There are older hams who wouldn't be able to pass their license class test but who still enjoy participating in their nets and talking to their circle of ham friends. I don't want to be the one to take that away from a senior ham who is hurting absolutely no one by enjoying their hobby. The fact they might not pass the Extra test means nothing.

Radio Buff isn't going to want to give up enjoying radio when he/she is older and can't pass the exam either.

>
> The passing score for written exams needs to be raised to 85%.

I have no problem with this provided the exam is similar. If you want to raise the minimum score required while also increasing the difficulty level of the exam by 20-25% the combination will make it too difficult for many. You will kill amateur radio because there will be far fewer coming into the hobby than going SK.

>
> Code elements should be 13 wpm for General, and 20 wpm for Extra.

Code should not be a part of the license test anymore than PSK or any other operating mode. There are so many different ways to enjoy and utilize amateur radio today that were not available decades ago that make code no longer a necessity. Mandating code skills is now similar to mandating slide rule skills for an engineer. It is an excellent tool and anyone capable of using it has a true skill. That said, there is nothing that can't be done by one without slide rule skills. They may be at a disadvantage at certain times and in certain specific locations and scenarios but for the most part the individual with the slide rule skills has no true advantage today as they did a few decades ago. The same holds true with code.

I do believe there should be a segment of the bands each license class is authorized that is reserved for those with code in their license. It just shouldn't be a requirement any longer. It keeps otherwise intelligent and capable people away from the hobby and the goal should be to bring them in not keep them away.

>
> Make the no-code license one year non-renewable.

This point is pointless with the sensible approach outlined above.

Yes it does mean something. It means they're appliance operators. They
pass their exams once then forget everything and don't want to advance
themselves anymore or be proficient hams. They're not an asset to the
service, they're just lazy asses with licenses and only want to operate
appliances.

> Radio Buff isn't going to want to give up enjoying radio when he/she is
> older and can't pass the exam either.

If I can't pass the tests, I don't deserve a license, or renewel. I don't
get to operate if I can't qualify. It's that simple. You people think
that if someone can't pass a test, they should get the license anyway.
It's a government handout just like how you get your welfare checks and
food stamps in the mail at your project housing. Your Democrat party
outcome based thinking is what is distroying Amateur radio and America.
Everyone is equal and if you want to excel and improve yourself there is
something wrong with you because your not supposed to want to do that.

>>

Quality or quantity? You people that want things easy always say
requiring more qualified licensees will kill the service. You're against
quality because it require you have to work a little. Well, If you ever
need radio help in an emergency to save lives & property, and the ham
operator you talk to on the other end is an incompetant retard, I'll bet
you'd wished for quality then.

Yah, we can't require quality or skill for a license. I know you're right.
We gotta be like CB'ers.

> I do believe there should be a segment of the bands each license class
> is authorized that is reserved for those with code in their license. It
> just shouldn't be a requirement any longer. It keeps otherwise

Code isn't a requirement, you can always talk on CB, FRS, and cell phones
all you want.

>>
>> Make the no-code license one year non-renewable.
>
> This point is pointless with the sensible approach outlined above.

No, it's not pointless. It insures licenses will improve and will be
valuable to the service. I know you would hate that because in another
month you would either have to upgrade or loose your ticket.

Doesn't anyone else here want to save ham radio? I'm getting tired of
arguing with the lazy asses. I hope some of you cared and want to help me
save ham radio enough that you emailed this to President Bush, your
Senators and Congressmen to press the FCC does the right thing for us:

No more automatic renewals. Individuals must retest and
pass all elements required for their license class.

The passing score for written exams needs to be raised to 85%.

Code elements should be 13 wpm for General, and 20 wpm for Extra.

Make the no-code license one year non-renewable.

73, Thanks for your support.

SC

> wants to throw off the bands with in a year

Markie,

I'm not throwing you off the bands. You're throwing yourself off. You
have to pass a test for the privileges. If you can't pass the test like
Techs used to have to pass, you get no privileges to operate and have to
go back to CB with everyone else that can't pass a test and acts retarded.
You earn privileges, licenses aren't totally free handouts from the FCC
yet, as much as you people wish they were. No one is throwing you off the
bands. You being a lazy ass that can't spell and don't want to learn gets
you thrown off the bands. The no-code license was a bad idea to begin
with anyway. You couldn't have got licensed under the old system. You
and Sal M. Onella would still be talking yourselves on CB and pissing off
truck drivers.

perhaps it was (I don't agree it was but I will grant it might be)
but it is 20 years too late for that discussion
>You couldn't have got licensed under the old system.
Acualy I could have gotten one

by simply accepting the offer of those testing to lie and say that I
tooked the recieve I passed one and tranmtiing test I took a month
later and passed (while failig n that day) and claim they taken and
passed the same day

I certainly could gotten a license I was merely too honest
>You

> and Sal M. Onella would still be talking yourselves on CB and pissing off
> truck drivers.
I still use CB when it serves my needs as I also use mMURS and FRS when
they suit

but you clearly hate what the ARS is

and you would enact a sytem that would kill they ARS as it is if you
had the power

that makes you one real sicko

you got that right the point is that you want to kill the ARS becuase
it has eveoled
> It insures licenses will improve and will be
> valuable to the service.
nope
> I know you would hate that because in another
> month you would either have to upgrade or loose your ticket.
nope

I do hate the ioidea of yet again taking prevdeges away form operators
that Have earned them I think een the ARRL and FCC learned that lesson
year ago
>
> Doesn't anyone else here want to save ham radio?
Sure I want to save it

you don't
> I'm getting tired of
> arguing with the lazy asses.
then do your self a kindness and stop you are not helping the ARS
except for contuiing to prod the No Coders into pushing the FCC to stop
the bleeding your kind hae created
> I hope some of you cared and want to help me
> save ham radio enough that you emailed this to President Bush, your
> Senators and Congressmen to press the FCC does the right thing for us:
Indeed I did email your thought to a freind on the white house staff

I reported on the laughter that rsulted
>
> No more automatic renewals. Individuals must retest and
> pass all elements required for their license class.
not bad but not likely since it will rsult in prevledges being taken
away from those that EARNED them
>
> The passing score for written exams needs to be raised to 85%.
if you like
>
> Code elements should be 13 wpm for General, and 20 wpm for Extra.

suicide for the service and will never be enacted by the FCC they have
ejuected anything that takes prevedlges awayfrom people
>
> Make the no-code license one year non-renewable.
and the final

throwing half of the ops currently licensed would insure the loos of
most if not all of our spectrum

is it just that simple
>

That's not passing, that's cheating. If you're old enough to go to
school you're old enough to know the difference.

>but you clearly hate what the ARS is

If he hated it he wouldn't care what it's become. He cares because he
DOESN'T hate it.

>and you would enact a sytem that would kill they ARS as it is if you
>had the power

There were plenty of hams when 13 wpm was the entry level. A 5 wpm code test and a *real* written test wouldn't kill it, it would just separate those who are willing to do what it takes to be hams from those who just want the license without the work.

I think that's one of the problems here. CW isn't just an operating
mode - it's a language, and the test already includes one language, so
testing for knowledge of a language isn't anything new.

There's NEVER been a test of CW operating mode, technique or ability -
just proficiency with the language of International Morse. Since one
must demonstrate proficiency with another language (English) to obtain
a license, it's a matter of degree, not a matter of kind.

the test do no t include another lange or even english as a lang

but it is load of bullto say Morse is a language
>
> There's NEVER been a test of CW operating mode, technique or ability -
> just proficiency with the language of International Morse.
agreed
> Since one
> must demonstrate proficiency with another language (English) to obtain
> a license, it's a matter of degree, not a matter of kind.
no such requirement exists indeed if you can read then the question and
answers are suposed to read to you and your aswers taken down

no requirement to understand english exists in order to be licensed

maybe nut the current entry rates sugest otherwise and He does not
propose 5wpm and writeen test he prososes 13 wpm and a total lack of an
effective entry class and elimiating half the current licees and likely
a lot more than that

and any "paln" that involves dumping 300,000 hams right of the bat is
pretty going to finish off the ARS

There's a difference between earning and being able to get with no
effort.

>> >> The no-code license was a bad idea to begin

That you have an opinion doesn't make the opinion something that
should be government policy. Who do you think you are, Bush? (Oh,
forget that - his opinion isn't worth as much as yours.)

>but in any case the FCC will never take my prevledges thay have made
>that clear

Right - the government NEVER changes anything. Are you really that
naive?

> accordingly you need to learn to deal with what is instaned
>of trying to overturn history

I have nothing to deal with - I'm licensed, and could keep my license
if they made 20 wpm, or digital mode testing, a yearly requirement.
The biggest problem would be freeing up a day to get to wherever the
test was being given.

>> >Acualy I could have gotten one

>> It was you who said, "I having never been able to passa code test", so
>> you couldn't have.

>you spoke too soon

No, you could have stolen a license - you couldn't have been licensed.
There's a difference. Robbing a bank isn't earning a salary.

>> That's not passing, that's cheating. If you're old enough to go to
>> school you're old enough to know the difference.

>so it is cheating it still is obtaining a license

That's about what it's come to these days, isn't it? We can't hurt
people's feelings by telling them that they're just not qualified to
do what they want to do. The kid fails all his tests and never turns
in homework? Hey, he's still a high school graduate. Let his boss
suffer.

For many years, my CCNY degree was worthless, because anyone could get
one. Whether they could pass the tests, or not even sign their name,
mad no difference. That little escapade has changed. Maybe some day
a ham ticket will mean something again too. Right now all it means is
that you took the time to apply for it.

>> >but you clearly hate what the ARS is

>> If he hated it he wouldn't care what it's become.

>he hates the ARS today his manner makes that plain

>>He cares because he
>> DOESN'T hate it.

>>
>> There were plenty of hams when 13 wpm was the entry level. A 5 wpm
>> code test and a *real* written test wouldn't kill it, it would just
>> separate those who are willing to do what it takes to be hams from
>> those who just want the license without the work.

>maybe nut the current entry rates sugest otherwise

Correlation isn't cause. Who needs ham radio with cell phones and the
internet? (I spent a lot of my ham effort maintaining an HT so that I
had communications when I was out and about. A cell phone's so much
easier.)

> and He does not
>propose 5wpm and writeen test he prososes 13 wpm and a total lack of an
>effective entry class and elimiating half the current licees and likely

>a lot more than that

Oh, you mean the way it used to be, when there were plenty of hams.

>and any "paln" that involves dumping 300,000 hams right of the bat is
>pretty going to finish off the ARS

Seems to me we had a pretty good ARS when we only has 100,000 hams. If dumping 300,000 means losing half, it means having 3 times the number we used to have. How is tripling "finishing off"?

Languageless? You MUST demonstrate proficiency in at least ONE
language to get a license, even today. A code test is demonstrating
proficiency in two languages - not a major step.

becuase it would be halfing not triplling and to assume it is only
halfing is generous many of the current generald and extra would be
weed out withon 10 years
if ham radio looks like it it is dying we will loose oour bands to
anyone that wants em indded a likely result would losing many of ou r
hf bands bands to literaly an extpanded CB service our vhf and up
would be savaged

and we would be powerless to resist

my opinion yes but also a fact Morse code is no more a language than
Crillic is

it is simply an alphabet

you can exchange a limited amount of info using the stand codes but you
can say "do you walk or run by the sea" in morse to any one that does
not speak or read english first

you are simply spreading ignorance al
>
> >no such requirement exists indeed if you can read then the question and
> >answers are suposed to read to you and your aswers taken down
>
> Languageless?
yes indeed although it easier if you do understand english not required

not suree if you can take the test in spanish (or other ;lang)right
off but if not now soon I expect it will be possible
> You MUST demonstrate proficiency in at least ONE
> language to get a license, even today.

nope no such requirement exists not for techs not generals and not
extras either

indeed you point out the way you can get a license without demtating
skill with english if you simply memroize all the questions and answers
their remains no requirement that you understand the content, that task
is easier if you know english but not a requirement

where is this requirement for lang skill in part 97?

> A code test is demonstrating
> proficiency in two languages - not a major step.

expect you are never required to demostrate profiicentcy in any
language at all
and if you were 2 languages would twice one and Code is NOT a langauage

just an alphabet

Indeeded the ignorance of Hams that spread such tales have been one of the tools the No Code movement has been using against you

Al,
with all due respect to you as a fellow ham I strongly disagree with your position. I got my ticket the so called "right" way. I've held an advanced (WA4***) class since I had to drive to the nearest office for for the written and cw.
Remember when the dam questions weren't even allowed to be published?
Remember those stupid ass ARRL study manuals?Al,how was that better?
Remember when the Dick Bash system came along? As I remember new hams would mail Dick the questions they remembered and a crude study manual slowly developed into a pretty accurate (for the time) guide.
Then guys started passing using the system. The "real" hams figured the guys who used the Dick Bash system weren't real hams "like them". Because they passed the "right" way and the new guys were, well, you know, what you say about the techs now.

Computer crashed, had to replace hard drive.

My BC898T and ARC898 Software had to be reinstalled. No longer
have the passwords. Uniden & Butel (who I purchased the software from)
will not give me the passwords that I already paid for - to reinstall
the software.

Would greatly appreciate the passwords for these programs

Thank you

And "fuck off shithead" is your defense against charges of obvious greed and
fleecing ?
What if your buddy who gave you a cable now demanded $80 ?
You would tell him to go fly a kite, wouldn't you ?

No Al, CW is a mode not a language. Are you seriously this ignorant?
Just about any language on the planet can use the mode CW which makes it
not a language.

You people that keep trying to make CW something it's not amaze me.
It's not a god, it's just a old mode.

Both Uniden and Butel are always very helpful in replacing lost
passwords.

I think you have to refer to people like Al as "Code Nazis" as they want
to force it on everyone, they try to make it into something it is not,
they think code is a cure for what ails the amateur service, and the
only way to salvation is through the code. Anyone who is not on the
code bandwagon is unfit for the amateur service and needs to be eliminated.

"All hail the code!" - NOT!

>> >but it is load of bullto say Morse is a language

>> Your opinion, not that of those who can converse in it.
>my opinion yes but also a fact Morse code is no more a language than
>Crillic is

Yes, I know your opinion. That still makes it just your opinion.

>it is simply an alphabet

No more than ASL is "just an alphabet". (BTW, those who actually
study the subject consider both Morse and ASL to be languages.)

>you can exchange a limited amount of info using the stand codes but you
>can say "do you walk or run by the sea" in morse to any one that does
>not speak or read english first

Neither can you communicate with someone in ASL if they don't
understand English. So? That still doesn't stop ASL from being a
language.

>you are simply spreading ignorance al

That you don't know something doesn't make it the ignorance of others.

>> >no such requirement exists indeed if you can read then the question and
>> >answers are suposed to read to you and your aswers taken down

>> Languageless?

>yes indeed although it easier if you do understand english not required

So if you don't understand English you can still answer English
questions. Interesting.

>not suree if you can take the test in spanish

I'm sure - you can. But one thing's for sure - it has to be in SOME
language.

>> You MUST demonstrate proficiency in at least ONE
>> language to get a license, even today.

>nope no such requirement exists not for techs not generals and not
>extras either

Stop arguing and start thinking. Your claim - that one doesn't have
to know any language to pass the test - is nonsense.

>indeed you point out the way you can get a license without demtating
>skill with english if you simply memroize all the questions and answers

In what language?

>their remains no requirement that you understand the content, that task
>is easier if you know english but not a requirement

You can understand the content if you don't understand any language?
How?

>where is this requirement for lang skill in part 97?

Part 97 itself.

>> A code test is demonstrating
>> proficiency in two languages - not a major step.

>expect you are never required to demostrate profiicentcy in any
>language at all

Which you are. You're just arguing, not thinking.

>and if you were 2 languages would twice one and Code is NOT a langauage
>just an alphabet

Again, your opinion, not the opinion of language experts.

>Indeeded the ignorance of Hams that spread such tales have been one of
>the tools the No Code movement has been using against you

The reason the FCC is dropping the code requirement has absolutely
nothing to do with any "movement" or any lame argument like "you don't
have to understand any language to pass the test".

Any language can be signed - but ASL is a recognized (by the experts)
language. Which nullifies that argument.

CW is not a language, it is a mode. I think what is being confused here is Morse code, and in particular much of the Morse shorthand used in the CW mode (and, for that matter, in much of phone mode as well). Those ARE a language of sorts.

>yes you wold have to deal with thresult of ruining the ARS

No, I really don't care that my license really means nothing these
days, and will mean even less in the future. I can operate on those
frequencies, and those modes, that I want to use, and talk to those
people I want to talk to. Whether new hams need CW or not.

>> The biggest problem would be freeing up a day to get to wherever the
>> test was being given.

>and having any freqs left to operate on

That has nothing to do with CW - that's set by international
agreement. Do you really think that if we had "only" 300,000 hams,
we'd lose our frequencies?

>lots of differences but at least I am in touch with the real world

Thinking that robbing a bank is earning money? Not very much touch.

>> >so it is cheating it still is obtaining a license

>> That's about what it's come to these days, isn't it?

>that offer was 30 years ago

Oh, I didn't notice. I was licensed for years by that time. I've
never been "offered" anything by the FCC.

>> It's BEEN hijacked - he's trying to get it back.

>weed out withon 10 years

300,000 is half of 100,000? What kind of arithmetic are you using? I
can't seem to get my calculator to make it come out that way.

>if ham radio looks like it it is dying we will loose oour bands to
>anyone that wants em

Your opinion - again, the world at large doesn't really care too much
what the US does these days, as far as number of hams.

> indded a likely result would losing many of ou r
>hf bands bands to literaly an extpanded CB service our vhf and up
>would be savaged

That has nothing to do with frequency allocation. Learn how the ITU
works before you make such funny assertions.

>and we would be powerless to resist

We ARE pretty powerless to resist now - but whether we keep a CW
requirement has nothing to do with the ITU. They couldn't care less.

bullshit you realy are unamerican the No code movement has showne we
have the powerthe chnange to change interantional law and national
rules on this subject

Maxim and his crowd shown we could change mnds in officaldom after WW 1
when some folks did not want us back on the Air at all

people have power man wake and smell what you are shoveling

all that is required is getting the right answers down on the answer
sheet

how the test taker manages that (other than cheating) is up the take
of the test one of the options

understanding the lang of the question is merely one or the options the
best one for the ARS but for example MY wife did not understand some
the question on her tech test using the fact I know something of how
the test is asembled and graded she was able to fill correctly some of
the ansers by looking for a patern in the in answers of the questions
she could understand without this test taking skill (avarient of skill
taught in some corners for passing other tests) she would not be a ham
today

and yet she was able to help set up at FD this year and make some
contact and has been able to devolpe soe of the skill needd in the ARS,
enough to be complmented on her skill duiring reccent local emergency
here in the area. i was busy geting theour aux power back online and
adjusted to the loads I wanted carried and she used the radio (and
helped by reading a a few reading fromt he station back to me as I
worked on stablizing our household systems

My wife does not understand a great deal of the content of the messages
she relayed, such understanding was not required in order to be of

assitance

On her own she has slowly been feling her way into the preveldges offered by her license, amsuingly to those that know me she is developing some talnet for Morse Code and and has been making a qso's in that mode but due being still clumsy and a more than bit of test anxiety has been unable to pass a test that and the fact the tone the arrl uses gives her a headache and the ARRL will not alow another tone to used without the report of an audiologist (at a cost of about 2k) means she will wait tille the FCC acts to get an HF license like I am waiting

Hey stupid. The cable is new and unused and I paid $89.99 for it and I sold
it for $65. Greed is when you make a profit stupid. Now go change you diaper
troll.

No, I'm not like that.
You'd have to get me mad enough to want to get even first, and petty usenet
insults don't qualify for that.
That was just a word of advice, as many are petty enough to be inflamed by
petty insults.
I'm an ass, I'll admit it, but I do have valid points sometimes.

Hello,

I have a mint Uniden 780 for sale.

Note that this is a model that cannot be upgraded when the re-banding takes
place (if ever), unfortunately.

Have just purchased the 996.

Also have the Butel software for it, which I'll include of course.

Think that $ 185 would be fair.

If interested, please e-mail me at: rgsroseX@comcast.net.
(remove the large X in address first)

Thanks,
Bob

This county is very active all 70 stations are one one dispatch and several tac channels using the mot 2 system.. i most of the time run the feed 24 hrs a day..

i am no longer using shoutcast. i just bought the butel arc eazy-stream. this program has no delay and shows tex tags of the channels that you are listening to.. in order for you to listen to my feed you will have to go to http://www.butelsoftware.com/ download the arc eazy stream client its free..

after you get that install which only takes a second enter my addy.

pinellasfirerescue.no-ip.org

then make sure the ports are set on

audio port 8100

data port 8101

happy listening.....

you can also watch the live CAD while you listen at this link http://www.co.pinellas.fl.us/ces/ActCallsPub.htm

Can't you spell any better than that?

So, Al. Can you tell us how many receivers or transmitters have you built from scratch? Not from a kit, or someone else's design, but from scratch? Drew a block diagram that was converted to a real schematic one block at a time where you did all the math, laid out the chassis, cut and drilled all the holes and built the equipment all by yourself?

What is the biggest transmitter you've ever built or used? I'm a disabled now, but I worked in broadcast, and built telemetry equipment that is in use all over the world, and in orbit. Tell us, what can you do other than whine? Have you ever built a commercial TV station from scratch? Have you ever maintained a 5 MW EIRP UHF plant with a 1700 foot+ tower? Had the fun of finding parts for a transmitter that haven't been made for 15 years while managing to stay on the air?

I found CW boring years ago, and have some hearing problems so I said to hell with Morse code and got involved in the equipment design end of things. It was more fun for me to develop a design and built it, get it aligned and working, then move on to the next design.

There's a secret password both Uniten and Butel use for enabling service
personal to access the software. Of course, it's not advertised anywhere
but in the service community. Try "gullible".

Best of luck!

Better? I don't know. Who said it was?

But how many hams today could even understand a schematic, let alone
build a W2EWL rig? But how many SSB (or DSB) transmitters were
homebrew? Hams don't even build repeater controllers any longer -
everything is appliance. What's ham radio supposed to be (from the
government viewpoint) if not a training ground? For people who know
how to operate. Not for CBers on ham bands.

People are afraid of losing things if we have too few hams? Where
will the FCC's justification go (the "ham radio provides us with a
pool of experienced operators" thing) if ham radio is just CB on
different frequencies?

did you have any point to make?

OTOH your coment does prove my point that being even know that
demonstarting langiuauge is NOT a requiremnt for a license

>scratch? Drew a block diagram that was converted to a real schematic
>one block at a time where you did all the math, laid out the chassis,
>cut and drilled all the holes and built the equipment all by yourself?

3 receivers, about a dozen transmitters. Oh, yes, and the automation
system of the Hong Kong Space Museum planetarium, the old Amtrak
ticket printer, some software that's in use in over 50,000
installations around the world ...

But I'm not the typical ham, I've been a design engineer for a long
time.

>What is the biggest transmitter you've ever built or used? I'm a
>disabled now, but I worked in broadcast

Never built anything over a kilowatt, but engineered some pretty hefty
ones. (Ch. 40 in Waterbury CT, WWRL, WHN, a few others.)

(You remind me of an IBM HR department of old. They always wanted to
know the largest program the applicant ever wrote. Someone
legitimately told them, back when software was a few k, that he'd
written a 3 meg program. It was a translation program with a 3 meg
dictionary. You're playing "mine is bigger than yours.")

>Tell us, what can you do other than whine? Have you ever built a commercial TV station
from
>scratch?

All by myself, no. Ever build a planetarium automation system all by
yourself from scratch (including inventing some of the technology -
which is still, after 30 years, state of the art)? But I'm not going
to get into a pissing contest with you. If you were mentally as old
as you claim your body to be you wouldn't have started one.

>I found CW boring years ago, and have some hearing problems so I said
>to hell with Morse code and got involved in the equipment design end of
>things. It was more fun for me to develop a design and built it, get it
>aligned and working, then move on to the next design.

Since I totally depend on 2 4 channel BTE aids, I can't receive CW
that easily any more, but that's not a good reason for the FCC to drop
the requirement. It's not even a bad reason. But when anyone can
guess well enough to pass the "technical" part of the exam, the
license isn't worth much.

Yes, the 20-289 is the correct cable for Win95 and the PRO95 scanners.
It looks like the Win95 program does not see the cable. First:

What version Windows are you using, XP or 98?

Is the 20-289 cable plugged into a COM port, or into USB-COM adapter?

How many times in the entire history of amateur radio
has a ham used CW to actually save a life? One would
think there would be a book full of examples by now.

how many life were saved thereby the Carpathia wheard the call and
arrived to save some folks what role did the ARS playing in saving even
one life that sorry day?

Did that save even one life? If the Titanic's CW operator
had not bullied the California's CW operator off the air,
the California might have saved the day. But after such
shabby treatment from the Titanic's arrogant CW operator,
the California's CW operator shut down and turned in.

We aren't talking about failure to receive a CW SOS. Those ships that
responded did so after receiving word of the sinking by radio. They
saved many lives from the lifeboats which would otherwise have been lost
to the cold.

C'mon Cecil, you've been licensed as long as I have. I Know you Know CW. Does that mean we're virtually obsolete?

RE Titanic:

The same result would have happened. The ship hit an iceberg in poor visibility. I don't think icebergs carry GPS transponders these days.

Now, the Titanic's GPS; does it have transponder capability? The older GPS units do not. Anyway, after the crew slipped by the iceberg that ripped it open, the radio op gets on the air and reports "SOS" or equivalent. The nearest ships respond. Under conditions similar to 1914{?} the Titanic still sinks. Many people still die. But, now we know to 20 feet exactly where the ship was when it sank.

GPS won't make a difference. Neither will CW today.

I still enjoy CW.

LOL!

I laugh when you lazy asses whine CW is keeping you from modernizing.

The code requirement isn't stopping anyone from modernizing. Hams don't want to modernize and won't modernize unless they're forced to modernize. That's what's stopping the modernization.

How does having a CW requirement prevent you from hooking a computer to a rig? It don't. You don't want to modernize because you're stupid or lazy. Just like you don't want to learn CW because you're stupid or lazy.

Naw, CW makes it too easy to communicate. CW is for lazy people. Real
hams want to struggle to copy signals through noise and QRM. That's
why they hate CW... it's no challenge!

The person would not die on my watch, as long as I could get a signal out
and someone on the other end could copy it. I'd probably have to practice
a bit to get back up over 50wpm, but I can do 25 or 30 all day long.

Perhaps I was incorrect in calling it AGC, the data sheet on the chip
calls it ALC . Regardless, it sucks up unwanted noise from the audio.

Sounds like a squelch control. It turns the audio off if there's just
background noise?

There's something being fed to that pin on the chip. Either ground
the pin or connect it to the positive rail - one or the other is
effectively "off" for the function. If you have a voltmeter, just
check which way the voltage goes to cut off the audio - you want the
other voltage on it constantly.

Nonsense. Having to do something promotes laziness? Then exercise
promotes sloth and dieting promotes obesity. By your "logic", that
is.

I was asked a number of times why I didn't have a degree in EE. When
I found a problem, or saw something that needed improved I didn't just
run crying to the MEs. I researched the problem and wrote up a detailed
report. I found the way to correct the problem, found a source for any
part we didn't already stock, and submitted it directly to the engineer
responsible for that item. After a while they would just flip through
my paperwork and submit it to be typed up on the proper forms, then sign
it off. I had planned to go to college and get my degree, but my time in
the Army threw those plans out the window.

Not really, but a lot of guys have never done anything more than
solder a microphone plug to a cable, and then use those crappy
solderless coax connectors. Actually, I'm always happy to meet a ham
with some real electronics skills. I meet a lot of retired hams here
near Ocala, and very few of them know any electronics. I hear the same I
could through together a CW rig from scratch in an emergency, then they
admit they don't even have an old ARRL handbook to look up a schematic,
or any parts. One told me he would use parts from his TV set, that the
horizontal output tube and a few other parts would put him on the air.
He didn't even know that his six month old TV only had one tube, and
I've never seen a transmitter built from a CRT and salvaged, unmarked
SMD parts.

Biggest isn't the goal, but a long term large project is always
interesting. I always liked a challenge, and left the easy jobs for
everyone else.

I never built anything like that, but I did repair some electronics
for the manager of the planetarium at the Orlando Science Center years
ago. I have worked on numerous industrial control systems, as well.
Sounds like it was a bit of a challenge. Good for you. :) My next
couple projects are an electric gate controller, and a motorized flag
pole, both with custom controllers with 100 MHz Ethernet interfaces so i
can run them from any computer on my home network. I have about 50' of
used TV tower in storage. I'm going to weld angle iron up two legs and
use a motorized trolley to raise and lower the flag. The gate openers
are a pair of used 24" sat tv jacks with a custom controller, a web cam,
and an emergency open button that sets off the security system as the
gate opens.

What about the people locked out by CW requirements who wanted to design and test RF equipment? Not the "I don't do solder" types, but people with a real love of electronic design? I've always had a severe dropout in my hearing that made it impossible to listen to CW for more than a few minutes at a time. I would end up with headaches, some that lasted for days. I finally threw in the towel and went into other areas of electronics. I wanted to learn microwave communications. Along the way I worked in Broadcast and Two way radio servicing. My last job was building commercial microwave receivers at Microdyne. They were custom built from base models for the customers application, on whatever band or segment they needed, and with IF and video bandwidths from 10 KHz to 40 MHz. In a place like that you would have thought there would be a lot of hams, but I only found about a dozen still licensed, and not one who was still active.

I'm talking about the emergency GPS-based system now in
operation. Other ships are automatically notified of
emergencies and given headings for reaching the emergency
location. If the Titanic and California had been so equipped,
the California could probably have gotten there before the
Titanic sank. The GPS-based emergency system doesn't go to
sleep like the California's CW operator did. I believe the
California also ignored a flare from the Titanic thinking
it was just part of the maiden voyage celebration.

If radio had not existed, the next passing ship would have
rescued any survivors. That's the way it was for centuries
before the invention of radio. There were often survivors
in lifeboats waiting to be picked up in the shipping lanes.
Well-equipped lifeboats could survive for weeks in calm
waters as did the ejected sailors of "Bounty" fame.

i hear you on the headaches I remmebr them from my teen aged efforts at
Morse
amusing I listen I can lsiten to morse all day without a problem as
long I don't try to break it down at all then a headache sets in a in
matter of seconds and slowly grows as I try to process the signal

I can in fat qso in the mode using pc with a spectrographic display to
allow me to look at the parts of the signal I can't read with the pc

I am not so sure about that. My first and only experience with Onstar - was not a very good impression. The "phone system" didn't dial out for crap - by the time you got it to accept the "right" number, you could be dead. Three people in the vehicle called out the number to the sytem a minimum of 5 times each before one of us finally got it to dial. I'm not sure how the other part (emergency locator and response) would have worked as it was never tried. Maybe it works ok in some areas and not others, like cell phones, I don't know - I'm not "that" familiar with it, but that was my experience, limited as it was. I know others seem to have good reports.

Code - has had it's place in history - be it with the Titanic however it helped - to maybe others stranded. We don't know about any (or many) "military" use(s) where it may have helped out, we don't always hear about those things. Is CODE the "saviour" of the world? NO. Each mode or language if you choose to call it that - has it's own heroic moment at some point. Even Smoke Signals (if truly used/existed) probably had SOME helpful value. In a sense, smoke signals STILL exist. They use them at the Vatican to signify certain events - more notibly the death of a Pope. Simply put - you use what you have available at the moment - be it smoke signals, sun light off a mirror, code, fax, voice, drums, whatever. Anything is better than nothing in time of need. Seriously, I don't understand the argument over

Code. Times change, things change. We could argue the use of the smoke at the Vatican when a PA system would do the same job.

With each advance in technology, something goes off the shelf and tossed aside or if kept on the shelf, gets serious dust collections due to little if any use. Electricity replaced candles and lanterns for the most part - though not completely. The Telephone didn't automatically discontinue all other forms of communication - ie, code. The fax and e-mail have not yet altogether replaced "mail" but some day it may. We as a whole can choose to keep something by "using" it or losing it by NOT using it. Things just don't disappear overnight. IF ya like code - USE IT. IF ya don't, then don't worry about it. "IF" you need it to get a license - 5 wpm is not that hard. You won't get it by osmosis. It takes some determination. Just like studying the book. Nothing in life is worth much if just handed to you. There are myriads of things we "must" learn in life which may never be used again - it goes with the territory of life and getting through it. I had to take a course in college once to jump through their hoops. Have I ever used it since? HELL NO. No plan to - either.

As to the Titanic operator being a smart ass as someone alluded to in here - maybe he was just losing his cool (very afraid) and trying desperately to get help and felt any other signals were just going to interfere. I don't know - just my own supposition. People do strange things in an emergency and staring death in the eye IS an emergency. Maybe he screwed up, maybe things could have went differently - we'll never know. FATE has a strange way of playing out in all our lives. We can argue all night long over the "would haves and could haves". Nothing will change that course of history. The fact remains, he at least got the word out and SOME people were saved. ALL could have been lost - were he killed prior to the sending of the message AND if no one else aboard knew how to operate the equipment. He was just a "player" in the scheme of things. Had they not hit the iceberg by whatever faulty(?) piloting or directions being given in the first place, the Radio Operator wouldn't even be the issue. We had an incident here when I was but a teen. A "firefighter" had a problem - losing his cool, he got on the radio and said "Clear the airwaves, we have a national emergency". Yes, they had a problem, not of "national" proportion, but he lost his cool and went overboard in what he did with the radio. People - even stone hard natured people - panic given the right scenario. FRIGHT exists in all of us - at some time. Panic is the response.

GPS, CODE, ONSTAR - NOTHING (except perhaps radar or sonar) would have told them the icebergs were there. Even if they knew they were in a section of water where there were "known" icebergs that they could have steered away from, - as we know - icebergs can and DO break off - so this one "could" have been such a case. It was a doomed mission just as any that the Astronauts have been killed on - even with all the so-called advanced technology and communications at their disposal. Any number of people could be pointed to or "what ifs" asked. The point is, the end is still the same. People died. In the latter case, NO amount of radio comms modes would have made a difference. Just like the spotting of the iceberg at the last minute - so too was the spotting of the problem in the heat shield and

equipment - aboard the shuttle - too little - too late - with or without radio - regardless the mode.

Just my 2 cents.

Lou/Ka3flu

It was before the Titanic hit the iceberg that the Titanic
CW operator told the Californian CW operator to get off the
air. He considered his normal Titanic CW message traffic to
have priority over any CW traffic that the Californian might
need to pass. Turns out the Californian's CW operator was
the only person in the world who could have saved the life
of the Titanic's CW operator.

Cecil I will conseede the CW usage could have saved lives could still
save lives

but that was never the question

the question of the thread is could you save a life with CW is the
chance came
I am sure you could.

I could I certainly I could by very different means

could I save lifes on HF if the need arouse certainly I could do so
except I do not listen them nowsince Ican't use them as rotuiene matter

which would save more life and property maintining CW testing to keep
many of the current tech from aquiring HF experence or droing the test
al though us sue of the bands and the abilty to learn in an evionment
that assures there is some one out there to talk to someone

The first thing to go out in a disaster is the phone system. The cell
phone system is not immune to this problem.

>

A long time ago a guy I worked with told me that when he was in the Army
he was assigned to the artillery. He could not qualify as a forward
observer because he could only work 20 wpm and needed to be able to do
30 to qualify as a FO communicator.

Is CODE the "saviour" of the world? NO. Each mode or language

The radio operation on the RMS Titanic was controlled by the Marconie
Radio Company. As such the Titanic radio operator was discouraged from
communicating with any station controlled by another company. This is
called free enterprise. Also the radio was not under the command of
Capt. Smith. This was changed after the sinking. They also mandated 24/7

monitoring of the emergency radio frequencies.

The Canadian Coast Guard and the United States Coast Guard expend a lot
of time and money looking for and tracking these icebergs. After the
Titanic went down the International Iceberg Patrol was created. It even
functioned during the Second World War giving positions report to allied
mariners.

It was a doomed mission just as any that the

Ship born radio communications were controlled by communications companies completely separate from the ship. The radio operators were not under the command of the ship's captain. In the case of Titanic the Marconi Radio Company controlled the radio. Californian and Carpathia had different company control and there was a definite rivalry between the companies. The Titanic operator was fully justified in telling the Californian operator to close station. This was one of the direct causes of the formation of the international radio treaties we operate under now.

It's totaly untrue. The Californian's radio operator ignored the
Titanic's distress signals because the Titanic was a Marconi ship and
the Californian was a Telefunken ship. The operators were not allowed to
communicate with the competing company's operators under any
circumstances under penalty of being put off the ship at first landing,
with no hope of getting home or being hired by the other company.

I recently blogged about it:

http://geoffstechno.livejournal.com/2006/06/22/

The men put off the Bounty did not survive with ease but only through very
hard work and the superb seamanship and leadership of Captain Bligh.
Although he was an absolute ass while in command of the Bounty, but his
performance was superb during that time.

And life boats floating in the shipping lanes could capsize in rough weather
or drift out of the shipping lanes. We will never know how many people died
at sea in such boats after surviving the loss of the ship.

The various technological improvements, including radio, have been important
in improving the survival odds.

There have been many people on the air thanks to a 6BG6 or similar.

>He didn't even know that his six month old TV only had one tube, and
>I've never seen a transmitter built from a CRT and salvaged, unmarked
>SMD parts.

Interesting idea, though - a CRT as a final with an inherent monitor.
I wonder how much RF output you can drive a CRT to. And, if you made
it AM, would that be "focused" modulation? Or, if you were listening
to the flyback, "high sing modulation"?

> I never built anything like that, but I did repair some electronics
>for the manager of the planetarium at the Orlando Science Center years
>ago.

I'll take a stab - a Minolta projector? I doubt it's a Zeiss.

> What about the people locked out by CW requirements who wanted to
>design and test RF equipment?

That was the whole idea behind the Tech ticket - minimal CW that anyone could get to in a few weeks and enough written exam to prove that you knew electronics. Anyone who can design or test RF equipment should be able to draw a few schematics.

There's the problem. "breaking down" CW is like listening to the
letters someone is speaking. You don't break it down, you listen to
what's being said.

Oh, you mean he didn't hear the automatic annunciator they had in use
in those days? Mechanical and clunky, but it worked.

The only thing the GPS-based system does is give you an exact location
- it doesn't notify anyone of anything. Plain old radio does that,
the same as it did back then.

>If radio had not existed, the next passing ship would have
>rescued any survivors. That's the way it was for centuries
>before the invention of radio.

The way it usually was in the centuries before radio (just ask the
crew of the Nuestra Senora de Atocha) was that when the ship sank the
people on her died. (The Atocha's crew were all hardened sailors, yet
only 3 crew members - out of 265 people aboard - clung to the wreckage
long enough to be rescued.)

> There were often survivors
>in lifeboats waiting to be picked up in the shipping lanes.
>Well-equipped lifeboats could survive for weeks in calm
>waters as did the ejected sailors of "Bounty" fame.

1) There weren't enough lifeboats in the Titanic.
2) They weren't "equipped".
3) The crew of the bounty were sailors used to pulling oars for hours
at a time. The passengers of the Titanic - those who were allowed to
get to the lifeboats - were pampered women and children, not used to,
or able to, row a heavy wooden lifeboat anywhere.
4) People who are wet and in their night clothes - most of those who
made it to the lifeboats - don't survive very long in sub-Arctic
climes.

But it's nice to reminisce about what happened, even if it never did.

Earlier this year i bought a BC898T, I wanted a good scanner/reciever
for uhf. My pro2006
work great but i needed a vfo/tunning knob. The 898 works greatand is
close but not quite as
sensitive as the pro6000 in uhf. So sense i dont care about trunking im
thinking of
getting a used BC9000xlt. My question is this, would the 9000 be as
sensitive as the pro2006 in uhf or will i notice any difference in
sensitivity between the BC9000 &
BC898t?

2292. Re: BC898T or BC9000XLT ?

Newsgroup: rec.radio.scanner

I've owned a couple BC9000-XLT's, and BC898T's over the years. I think you'll be happier keeping the BC898T. Is UHF MilAir your main interest? That's what I was using the BC898T for, and I was very satisfied. Another consideration is that the BC9000-XLT does not have a computer interface for programming, and/or control. The BC9000-XLT also required an optional CTCSS module, that is almost impossible to find these days.

Bill Crocker

Some Motorola two-ways can be programmed for receive only on selected channels. I know the HT1000 can. I had a UHF HT1000 programmed for GMRS Tx & Rx, and one channel for my local Sheriff, Rx only. It worked great! I don't think the Radius CP200 has that capability.

Learning something promotes laziness? Typical.

>learning CW promotes laziness

Yep, as I said, typical. Of a lazy person. Learning doesn't promote
laziness, laziness promotes not learning.

Yes I was trying to get better reception by using a tunning knob and
using the scanner with the squelch off. Seems the pro2006 would lock
on to a weak signal but then skip and
start scanning. The 898t wasent the answer either and yes i understand
the 9000 has no
pc control but i havent used the software and dont plan on it. As far
as the tone decoder
thats fun th play with decoding public service tones but i havent found
much use for it
otherwize. I would really like a good sensitive uhf tuneable am fm
receiver that could be converted to ssb also, the pro2006 can be but as
you know it dosent have a vfo knob.

GPS systems are receivers. Transmitters that use GPS-derived data
aren't GPS-based systems, they're transmitter-based systems. No
transmitter, no notification. No GPS, notification is a little less
accurate, that's all.

>>> If radio had not existed, the next passing ship would have

>Yes, that's what I said. Passing ships rescue survivors.

Or, in this case, ships that were part of the same flotilla (they
didn't have to have any luck in being in the area) only managed to
rescue about 1% of the survivors. If they had waited for "passing
ships", their grandchildren would have been too old for rescue. Most
shipwreck survivors who are rescued aren't rescued by ships that just
happen to be passing, they're rescued by ships that knew about the
wreck and responded. (Before radio, most shipwreck survivors weren't
rescued.)

All that is true. If one was away from the shipping lanes,
one was SOL or USCWAP. However, if one was in the shipping
lanes with a flare, one at least had a chance of being
rescued. According to my nephew, one of our ancestors was
rescued in such a manner. Presumably, if that had not
happened, neither he nor I would exist.

The notification systems are radio-based. Notification isn't made by
GPS. We had radio-based notification systems long before we had the
GPS.

> If one was away from the shipping lanes,
>one was SOL or USCWAP. However, if one was in the shipping

Once flares had been invented. We've been sailing the seas for at
least 4,000 years, over 3,500 of them without radios, flares or other
means of communications to ships or land installations we couldn't
already see.

I am using a USB to Serial adaptor for a cable I bought long ago (not
Radio Shack)

Here are my Settings from the Configuration Tab-Serial Port
Com Port 5 found that by looking in System
(control Panel)for my USB
Extra Write Time is checked
RTS is not checked
Readback is not checked

Hope this helps...........

Your assertion that transmitting GPS coordinates is not
a GPS-based system is obviously ridiculous and hopefully
just a bad joke. Better luck next time.

Many ham are American Red Cross first aid and adult CPR instructors.

That trumps CW at any speed.

Oh, he will. Mark is caught between two septic systems and wallows in both.
Does he want to spam Usenet with his inane comments or does he want to spam
Nim Busters? Since nobody (with any credibility) on these boards has
responded to Mark, he slowly learned that he was being ignored or avoided.
So, what is a spammer to do? He did what came naturally to him, and that
meant that since the low-lifes had gone elsewhere, he followed.
Now he wants to bring his like-minded idiots back to Usenet and again
disrupt it for the rest of us.
The greatest service any of us can render Mark is to ignore him. That, more
than anything, seems to bug him the most.
Killfile the putz. Ignore him. Simple as that.

My Paul Schreck troll served its purpose.

For the last ten days I've watched as my New Sheriff In Town troll pitted you guys one against the other. To watch the verbal exchanges was reward enough, but to watch you guys argue amongst yourselves was the best yet.

You guys went nuts looking at headers while stumbling over yourselves to get "one up" on the other in the quest to figure out from whence my post originated.

The best part of this was when Paul himself commented that he would be posting complaints to my ISP for my sheer audacity. For what? I did not use Paul's name, remember? I used a name similar to, but not exactly as Paul spells his name.

Seems that stuffed-shirt Paul and his like-minded egocentric cohorts dislike being chastised, or worse, being made fun of.

By the way, Paul, I'm still waiting to see those complaints you offhandedly said you would lodge. Empty threats?

No GPS, the notification still occurs. No radio, the notice doesn't
occur. What was the notification based on, again?

Yep, you should. Try:

"People who live in glass houses should dress in the basement"

It's ironic justice that someone who posts a typo flame posts more
typos in his flame than the post he's flaming.

Just found this thread. If I had to use CW to save someone's life, it would depend on a lot of variables.

Firstly, if it involved any of my own ham radio gear, it would be more than a little odd, since I have a mic for each transceiver and I don't own a key jack that would plug into any of them, although I do have a straight key, just no jack to plug it in with.

Assuming some weird contrived scenario where I had the equipment to send CW but not phone, it would depend what frequencies it worked on. If it was on the HF ham bands then no major problem, as there are still quite a few people who still use CW.

My own lack of real aptitude shouldn't be a real problem for two reasons. One, I could slow down to a comfortable speed, i.e. 5-10 wpm. Two, it would matter more whether others could copy my sending than vicea versa. I did pass 20 wpm, but have yet to buy a plug for my key, many years later. As I said though, that really wouldn't make a difference.

If you asked the same question to someone who had only passed 5 wpm and then, like me, never used it, then I suspect the victim wouldn't make it. But then in most countries there is NO morse code testing any more, so there are plenty of hams now who've never learnt atall. For decades there have been no code VHF hams in most countries anyway.

There again, if the key was anything other than a straight key, that would be curtains for the victim, as I would have no idea how to use it.

OTOH, if this scenario didn't involve the HF ham bands, then the victim would be as good as dead, as I'd never find a non-ham who could still read CW on the other end.

And your point was...?

Any notification that reports GPS coordinates is GPS-based,
by definition. When you add GPS capability to a radio
transmitter, it doesn't cease to be radio-based but it also
becomes GPS-based. It's not an either/or mutual exclusive
situation. Just as one can have a vehicle that is both
white and a Chevrolet, one can have an emergency system
that is both GPS-based and radio-based.

To "some" extent, I "may" have to disagree. I held a class once for "No Code Tech" and one of the guys - a man in his 70s asked if he could go for the code test even though I wasn't teaching code. He said he had learned it years ago in the service - but may be rusty. Let me tell you - when he was done testing, he had PERFECT copy. Was he practicing all along? We'll never know - nor did I ask. He has since passed on. Some people DO have a good memory and retain quite well. Others - lose things almost immediately if not used. Some of us, it takes a while to lose it and we usually do.

Very well put. Every mode is useful, important and valuable in different situations. What's unfortunate, is that the only modes the anti-CW crowd wants and supports are "Lazy Mode" and "Retard mode"

2346. ProScan Version 1.5 beta 2 with Scanner Over IP

Newsgroup: rec.radio.scanner
Date: 2006-07-16 03:04:59 UTC
From: res008wn@verizon.net
Message-ID: <v1iug.3010$Lw.2074@trnddc07>
Source record: 8226

I just released ProScan Version 1.5 beta 2

ProScan newest feature - Scanner Over IP
No Other Programs or Plug- In's Required
ProScan is the server and client

ProScan has a full feature set.
I'm thriving to make this the best!

Let get some servers going. No nag screen if ProScan is running as a
server.
I have my online streaming Ontario, Calif PD

Download and try the 30 day demo.
Registration is $50 and includes all future versions and unlimited support.

Visit my site at http://www.proscan.org/index.htm

2356. WTB Popular Communications JULY 2006 Issue

Newsgroup: rec.radio.scanner
Date: 2006-07-16 05:21:17 UTC
From: Zach K7LTF <zach@benders.net>
Message-ID: <1153027277.762976.68350@m79g2000cwm.googlegroups.com>
Source record: 8236

If there is someone who has the July 2006 issue of popular
communications, and does not need or want to keep it around, I would be
interested in buying it off - & or paying the shipping cost whatever
the case may be, please let me know.

Thanks
Zach

It is possible that someone could learn at 5wpm, not use it for years, and
still be able to use it, but I wouldn't want to bet my life on it.

More to the point is I can't magine a scenario in which CW would be the
only mode available, and that hams are about the only remaining users of
CW.

How about a portable QRPer, camping out of range of
a cellphone tower, who falls and can't reach his beer?

oh I can imgine that much bt then however I can't take the next and
imagine that cw is all their is andthat the message is going to do
anygood the only senario like that is independace day

2361. least crowded frequency band for wireless mic?

Newsgroup: rec.radio.scanner
Date: 2006-07-16 17:16:44 UTC
From: peter <nospam@nospam.com>
Message-ID: <0wuug.5301$Ss2.3639@trnddc01>
Source record: 8241

I want to buy a wireless mic set and it comes in one of three bands that I have to choose at the time of purchase:

518 to 554 MHz
626 to 662 MHz
740 to 776 MHz

The goal is to pick the band with the least interference.

The manufacturer's web site has a table showing TV stations in my city (seattle), and it look like it's clear in the 740 to 776 MHz range. So should I buy the set in this range or is there more research to be done?
http://www.sennheiserusa.com/newsite/mat_dev/frequencyfinder/PDFs/WASHINGTONew.PDF

BTW, they said the table is created in 2002. Does anyone know where to find an updated frequency usage table for a given city?

Sorry this is not directly related to scanners but I hope people in this NG may offer more insights than musicians. Thanks.

I think this is the nature of the premise on which the original post was based.

Compare it to a similar situation, where a film camera user is debating a
digital camera user:

"If you came upon a drowning man, and you had to choose whether to save
him or photograph his demise, what kind of film would you use?"

A transmitter with no mic, no computer - just a transmit switch. Or
not even a transmit switch, but you can get to one of the battery
wires. Far fetched, but it could happen.

>and that hams are about the only remaining users of CW.

Boy Scouts? The military no longer uses CW - what used to be passed
by brass pounders is now passed digitally. Merchant Marine? Same
thing. Aero commo? Same thing, except for voice. I doubt any group
or service actually uses it these days.

Even those who tout digital modes - they want to buy an interface and
software and "be" on digital. Then they wonder why the signal they're
hearing, that sounds just like the digital mode they use, doesn't work
on their setup. Maybe because a PSK program won't decode SSTV?

Reminds me of the GPRS "exerts" who can't understand why changing the
"code" on their radios doesn't eliminate the interference from the guy
next door.

The anti-CW crowd wants no code and a written test you can memorize
the answers to. It's their "right" to be on the air, isn't it? Even
if they need 2 more clues to be totally clueless?

If you're in a small city (it sounds as if this is the case), you
don't have to worry too much. If not, the only "research" that would
do you any good, aside from [tie in to a scanner group] listening and
finding out which band actually is the least used, would be finding
out which bands will be used more heavily in the future, and that's
impossible.

You may want to research how wireless mics actually work. Unless
you're looking for very long range (illegal) with large antennas
(illegal), you probably won't have anyone else running a wireless mic
close enough to your site to have to worry about it. If the situation
is indoors, it's even better for you - you have some control over
ambient signals.

>BTW, they said the table is created in 2002. Does anyone know where to find
>an updated frequency usage table for a given city?

The FCC's web site, but it's not easy getting that information out of
the database. There's no site I know of that'll present it to you in
the simple way Sennheiser did in that table.

learn what you are tlaking about psk31 sounds very little like sstv and
most of the programs that can demolate it show you a spectrograhand
they look nothing alike

there is some time confusion in wether that sgnal BPSK 31 or QPSK31 but
the marvels of Windows wallo me to run the output of the sound card
interface to at least 2 program so it can be worked out

you just want to bash any ham that doesnot follow your morse fetish

it is our right and everybody else right that any restriction to our
access to public spectrum be "neccisary and proper" (one of 3 clauses
in the constitution that give the power to regulate the airwave to the
govet at all) otherwise the 10 reserving all right and power to the
sates or the people applies modifing that is the thrid place where the
consititution of US touches on this issue mby making the constitution
and the TREATIES made the supreme law of the land

according the Govt lost the POWER to impose Morse Code test on the ARS
unless it can be justified under some other powere of the Constitution

I find it interesting that the ProCode tes crowd has such disrespect
for that document

2368. 30 Steps, Monthy post. Tips for Phonies.

Newsgroup: rec.radio.scanner
Date: 2006-07-17 00:07:42 UTC
From: Slow Code <my.mail@no.spam>
Message-ID: <ixAug.5337$vO.3132@newsread4.news.pas.earthlink.net>
Source record: 8248
Cross-posted to: rec.radio.amateur.policy,rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

The 30 Steps below will help all New Hams, it will also help you to find others just like yourself. These 30 steps should also be added to the present writtens.

Step One: Use as many "Q" signals as possible. Yes, I know they were invented solely for CW and are totally inappropriate for two meter FM, but they are fun and entertaining. They keep people guessing as to what you really meant. I.E. "I'm going to QSY to the phone." Can you really change frequencies to the phone? QSL used to mean, "I am acknowledging receipt", but now it appears to mean, "yes" or "OK". I guess I missed it when the ARRL changed the meaning. It is also best to use "OK" and "QSL" together. Redundancy is the better part of Lid-dom.

Step Two: Never laugh when you can say "HI HI". No one will ever know you aren't a long time CW rag-chewer if you don't tell them. They'll think you've been on since the days of Marconi.

Step Three: Utilize an alternative vocabulary. Use words like "destinated" and "negatory". It's OK to make up your own words here. I.E. "Yeah Tom, I "pheelbart zaphonix" occasionally myself."

Step Four: Always say "XX4XXX" (Insert your own call) "for I.D." As mentioned in Step One, anything that creates redundancy is always encouraged. That's why we have the Department of Redundancy Department. (Please note that you can follow your call with "for identification purposes" instead of "for I.D." While taking longer to say, it is worth more "LID points".

Step Five: The better the copy on two meter FM, the more you should use phonetics. Names should be especially used if they are short or common ones. I.E. "My name is Al... Alpha Lima" or "Jack.. Juliet Alpha Charlie Kilo." If at all possible use the less common HF phonetics "A4SM... America, Number Four, Sugar Mexico." And for maximum "LID points", make up unintelligible phonetics. "My name is Bob... Billibong Oregano Bumperpool."

Step Six: Always give the calls of yourself and everyone who is (or has been) in the group, whether they are still there or not. While this has been unnecessary for years, it is still a great memory test. You may also use "and the group" if you are an "old timer" or just have a bad memory. Extra points for saying everyone's call and then clearing in a silly way "K2PKK, Chow, Chow."

Step Seven: Whenever possible, use the wrong terminology. It keeps people guessing. Use "modulation" when you mean "deviation", and vice-versa.

Step Eight: If someone asks for a break, always finish your turn, taking as long as possible before turning it over. Whenever possible, pass it around a few times first. This will discourage the breaker, and if it is an emergency, encourage him to switch to another repeater and not bother you.

Step Nine: Always ask involved questions of the person who is trying to sign out. Never let him get by with just a "yes" or "no" answer. Make it a question that will take him a long time to answer.

Step Ten: The less you know on a subject, the more you should speculate about it in the roundtable. Also the amount of time you spend on the subject should be inversely proportionate to your knowledge of the subject even though you have no damn clue.

Step Eleven: Always make sure you try to communicate with only a handheld and a rubber duck antenna. Also, make sure you work through a repeater that you can hear very well, but it cannot hear you. This will put out a kind of "LID mating call": "Well, Joe, I can hear the repeater just fine here. I wonder why it can't hear me?" You will score maximum LID points if you are mobile, and with the radio lying in the passenger seat.

Step Twelve: If you hear two amateurs start a conversation, wait until they are twenty seconds into their contact, and then break in to make a call, or better yet to use the auto-patch. Make sure you keep the repeater tied up for at least three minutes. This way, once the two have re-established contact, they won't even remember what they were talking about.

Step Thirteen: You hear someone on the repeater giving directions to a visiting amateur. Even if the directions are good, make sure you break in with your own "alternate route but better way to get there" version. This is most effective with several other "would-be LIDs", each giving a different route. By the time the visiting amateur unscrambles all the street names whizzing by in his mind, he should have moved out of the range of the repeater. This keeps you from having to stick around to help the guy get back out of town, later.

Step Fourteen: If an annoying station is bothering you, make sure your other "LID" buddies have a "coded" frequency list. Even though "CODES" are strictly forbidden on Amateur Radio, it's really neat to practice "James Bond" tactics.

Step Fifteen: Always use the National Calling Frequency for general conversations. The more uninteresting, the longer you should use it. Extra points are awarded if you have recently move from an adjacent frequency for no reason. Make sure when DX is "rolling" in on 52.525 that you hang out there and talk to your friends five miles down the road about the good old CB days!

Step Sixteen: Make sure that if you have a personal problem with someone, you should voice your opinion in a public forum, especially a net. Make sure you give their name, call, and any other identifying remarks. For maximum points, make sure the person in question is not on the repeater,

or not available.

Step Seventeen: Make sure you say the first few words of each transmission twice, especially if it is the same thing each time. Like "roger, roger" or "fine business, fine business". I cannot stress enough about encouraging redundancy.

Step Eighteen: If you hear a conversation on a local repeater, break in and ask how each station is receiving you. Of course they will only see the signal of the repeater you are using, but it's that magic moment when you can find a fellow "LID", and get the report. Extra points are awarded if you are using a base station, and the repeater is less than twenty-five air miles from you.

Step Nineteen: Use the repeater for an hour or two at a time, preventing others from using it. Better yet, do it on a daily basis. Your quest is to make people so sick of hearing your voice every time they turn on their radio, they'll move to another frequency. This way you'll lighten the load on the repeater, leaving even more time for you to talk on it.

Step Twenty: See just how much flutter you can generate by operating at handheld power levels too far away from the repeater. Engage people in conversations when you know they wont be able to copy half of what your saying. Even when they say your uncopyable, continue to string them along by making further transmissions. See just how frustrated you can make the other amateur before he finally signs off in disgust.

Step Twenty One: Use lots of radio jargon. After all, it makes you feel important using words ordinary people don't say. Who cares if it makes you sound like you just fell off Channel 19 on the citizen's Band? Use phrases such as "Roger on that", "10-4", "I'm on the side", "Your making the trip" and "Negatory on that".

Step Twenty Two: Use excessive microphone gain. See just how loud you can make your audio. Make sure the audio gain is so high that other amateurs can hear any bugs crawling on your floor. If mobile, make sure the wind noise is loud enough that others have to strain to pick your words out from all the racket.

Step Twenty Three: Start every transmission with the word "Roger" or "QSL". Sure, you don't need to acknowledge that you received the other transmission in full. After all, you would simply ask for a repeat if you missed something. But consider it your gift to the other amateur to give him solace every few seconds that his transmissions are being received.

Step Twenty Four: When looking for a contact on a repeater, always say your "listening" or "monitoring" multiple times. I've always found that at least a half dozen times or so is good. Repeating your multiple "listening" ID's every 10 to 15 seconds is even better. Those people who didn't want to talk to you will eventually call you, hoping you'll go away after you have finally made a contact.

Step Twenty Five: Always use a repeater, even if you can work the other station easily on simplex ... especially if you can make the contact on simplex. The coverage of the repeater you use should be inversely proportional to your distance from the other station.

Step Twenty Six: When on repeaters using courtesy tones, you should always say "over". Courtesy tones are designed to let everyone know when you have unkeyed but don't let that stop you. Say "over", "back to you" or "go ahead". It serves no useful purpose but don't worry, it's still fun!

Step Twenty Seven: Use the repeater's autopatch for frivolous routine calls... especially during morning or evening commute times. While pulling into the neighborhood, call home to let them know you'll be there in two minutes.... or, call your spouse to complain about the bad day you had at work. After all, the club has "measured rate" service on their phone line so they get charged for each autopatch call. Your endeavor is to make so many patches in a year that you cost the club at least $20 in phone bills. That way you'll feel you got your money's worth for your dues!

Step Twenty Eight: Never say "My name is ....." It makes you sound human. If at all possible, use one of the following phrases: a) "The personal here is ..." b) "The handle here is..."

Step Twenty Nine: Use "73" and "88" incorrectly. Both are already considered plural, but add a "s" to the end anyway. Say "73's" or "88's". Who cares if it means "best regards" and "love and kisses." Better yet, say "seventy thirds"! (By the way, seventy thirds equals about 23.3).

Step Thirty: If the repeater is off the air for service, complain about the fact that it was off the air as soon as it's turned back on. Act as though your entire day has been ruined because the repeater wasn't available when you wanted to use it. Even thought you have never paid a penny to help out with the upkeep of it.

Greetings Mr Code;
Perfect Post,Sir.
Your knowledge,as well as your logic, is superior.
Thank you,
an honest ham

Just finished an easier to read manual for the Pro 97/2055 scanners:
http://myweb.cableone.net/marksscanners/97/97.html

And, updated my other manuals:

For the BC246T:
http://myweb.cableone.net/marksscanners/246/246.html

For the Pro 95/93/2053:
http://myweb.cableone.net/marksscanners/95/95.html

For the Pro 2052:
http://myweb.cableone.net/marksscanners/2052/2052.html

For the Pro 94A/B:
http://myweb.cableone.net/marksscanners/94AB/94AB.html

For the Pro 94:
http://myweb.cableone.net/marksscanners/94/94.html

For the Pro 92/A/B/2067:
http://myweb.cableone.net/marksscanners/92/92.html

There's a world of difference between technical electronics knowledge
and ability to decipher code. One has absolutely nothing to do with the
other. FWIW, I don't even have a ham license anymore. I don't care
about the code, whether it lives or dies. If you enjoy brass pounding,
then do it.

Just don't equate that ability with another that is not even slightly
related.

jak

We've yet to see any proof. Let's see, you can't communicate in any
resemblance of English and you have the beginner's ham license. So much
for your expertise.

> Hiding no Living here it is lovely county

Yes, you are hiding from something, perhaps your child molesting past?
Is that why you high-tailed it out of Illiopolis, IL?

2395. Pro 98 scanner question

Newsgroup: rec.radio.scanner
Date: 2006-07-17 23:17:03 UTC
From: clfe <postmasternospam@clfurentnospam.com>
Message-ID: <44bc1a67$0$3672$ecde5a14@news.coretel.net>
Source record: 8325

I have a question regarding the Pro 98 scanner. The 800 MHz stuff if just starting to catch hold around here, and "I" personally don't deal with it much. So, I have a question - on the Pro - 98, with some 800 stuff programmed in, often I hear a sort of machine gun noise. Other times I hear actual signals. The noise is so irritationg though, you tend to take the freqs out and not hear anything. I've not used the "Trunking" function on the scanner as yet, is that the problem?

Thanks

>>
>> Step Nine: Always ask involved questions of the person who is trying to
>> sign out. Never let him get by with just a "yes" or "no" answer. Make
>> it a question that will take him a long time to answer.
>>
>> Step Ten: The less you know on a subject, the more you should speculate
>> about it in the roundtable. Also the amount of time you spend on the
>> subject should be inversely proportionate to your knowledge of the
>> subject even though you have no damn clue.
>>
>> Step Eleven: Always make sure you try to communicate with only a
>> handheld and a rubber duck antenna. Also, make sure you work through a
>> repeater that you can hear very well, but it cannot hear you. This will
>> put out a kind of "LID mating call": "Well, Joe, I can hear the
>> repeater just fine here. I wonder why it can't hear me?" You will score
>> maximum LID points if you are mobile, and with the radio lying in the
>> passenger seat.
>>
>> Step Twelve: If you hear two amateurs start a conversation, wait until
>> they are twenty seconds into their contact, and then break in to make a
>> call, or better yet to use the auto-patch. Make sure you keep the
>> repeater tied up for at least three minutes. This way, once the two
>> have re-established contact, they won't even remember what they were
>> talking about.
>>
>> Step Thirteen: You hear someone on the repeater giving directions to a
>> visiting amateur. Even if the directions are good, make sure you break
>> in with your own "alternate route but better way to get there" version.
>> This is most effective with several other "would-be LIDs", each giving

>> a different route. By the time the visiting amateur unscrambles all the
>> street names whizzing by in his mind, he should have moved out of the
>> range of the repeater. This keeps you from having to stick around to
>> help the guy get back out of town, later.
>>
>> Step Fourteen: If an annoying station is bothering you, make sure your
>> other "LID" buddies have a "coded" frequency list. Even though "CODES"
>> are strictly forbidden on Amateur Radio, it's really neat to practice
>> "James Bond" tactics.
>>
>> Step Fifteen: Always use the National Calling Frequency for general
>> conversations. The more uninteresting, the longer you should use it.
>> Extra points are awarded if you have recently move from an adjacent
>> frequency for no reason. Make sure when DX is "rolling" in on 52.525
>> that you hang out there and talk to your friends five miles down the
>> road about the good old CB days!
>>
>> Step Sixteen: Make sure that if you have a personal problem with
>> someone, you should voice your opinion in a public forum, especially a
>> net. Make sure you give their name, call, and any other identifying
>> remarks. For maximum points, make sure the person in question is not on
>> the repeater, or not available.
>>
>> Step Seventeen: Make sure you say the first few words of each
>> transmission twice, especially if it is the same thing each time. Like
>> "roger, roger" or "fine business, fine business". I cannot stress
>> enough about encouraging redundancy.
>>
>> Step Eighteen: If you hear a conversation on a local repeater, break in
>> and ask how each station is receiving you. Of course they will only see
>> the signal of the repeater you are using, but it's that magic moment
>> when you can find a fellow "LID", and get the report. Extra points are
>> awarded if you are using a base station, and the repeater is less than
>> twenty-five air miles from you.
>>
>> Step Nineteen: Use the repeater for an hour or two at a time,
>> preventing others from using it. Better yet, do it on a daily basis.
>> Your quest is to make people so sick of hearing your voice every time
>> they turn on their radio, they'll move to another frequency. This way
>> you'll lighten the load on the repeater, leaving even more time for you
>> to talk on it.
>>
>> Step Twenty: See just how much flutter you can generate by operating at
>> handheld power levels too far away from the repeater. Engage people in
>> conversations when you know they wont be able to copy half of what your
>> saying. Even when they say your uncopyable, continue to string them

ROFL, Sorry. I'm starting to believe laughing at him just encourages him
to make more typo's. We need to stop laughing and pity him instead.

Maybe if he had to learn CW the mental process would help his spelling.

Getting rid of CW is like choosing the kind of film.

Ham radio is drowning and the anti-code hams want us to think tossing it
bricks will make it float better. Dumbing things down is never an
improvement.

Considering that someone with absolutely no knowledge of electronics
can memorize enough to pass the test in about 8 hours, there's no
longer any real test of anything but the ability to memorize.

>FWIW, I don't even have a ham license anymore.

Then, as the courts would say, you have no standing in the matter.

nope he has full standing he is an american that means the FCC is
suposed serve not the ARS but the people of the USA.

the problem with you procoders is that you think the ARS owns the
bandwidth not the poeple of the USA

You really must be carefull about making assumptions, it tends to highlight
your ignorance.
I'm a Canadian, have full hf privileges and enjoy code very much.
So what relevance did your original post have in a forsale
group...answer=absolutely none.
Happy to help. Think before you post...help to cut down the spam!

amateur radio is obsolete and nobody cares about it.

The ham frequencies should be auctioned to the highest bidder!

"Seen" except for special needs. And those that do special needs will
likely be making millions. There will be about 12 of them that make it,
and thousands that don't, but wish they could.

I know quite a few in the photo biz, and film is, to put it very
bluntly, dead.

Probably. The machine gun noise is probably a trunked system's
control channel. You'll hear the voice traffic on the system if you
program it as a trunked system.

>
> The ham frequencies should be auctioned to the highest bidder!

Who do you propose would buy the bands? The only ones even remotely commercially viable are 70cm and above, and those are such small segments that they wouldn't be all that viable either. The bands 220 and below are not viable at all commercially because of the size of antenna needed. HF? Forget it!. Maybe give it to the pirates to play with.. that would be the only thing that could be done with it. I say leave it as is.

In 1953, as a sophomore in high school, I didn't know any
electronics and was therefore forced to memorize the ARRL
License Manual in order to get my Conditional license.
People like me have been memorizing License Manuals for
more than half a century.

Rules and regulations are just an exercise in memorization also. They require no knowledge of electronics either.

The CW text requirement is like the requirement for a foreign language requirement for some college degrees, it rounds out the amateur skills.

My amateur radio license, obtaining by memorizing the ARRL
License Manual in 1952-1953, was the catalyst that caused
me to seek and obtain a EE degree later in 1959.

The point is that an amateur radio license is a learner's
permit to exercise certain privileges during a lifetime
of learning. It is a permit, not a graduation certificate.

I love it.
This IS what 2 meter repeater operation has been like for years.
But cell phones are cutting down on traffic except for the die hards.
In fact, 2M repeater operation is getting back to being respectable.

I said "by function". Not "locate the resistor", but "locate the
balanced modulator circuitry".

You used to have to draw a few schematics on blank paper - no hints.
Now you have to be able to identify a resistor. Big deal - that
should take all of 3 seconds to memorize. Memorizing which side of
the heart sends out the oxygenated blood doesn't make you a cardiac
surgeon.

nor is a EE needed to be ham and contrube to advancing the state of the
radio art

the tests needed to cover those things THEN

THEN they more os less needed to inculde Morse code (lathough it could
have been avoided but for the treaty)

times change

adapt or die

SC,

Morris Code -plus- Continuous Wave (CW) Radio Transmission
-and- Semaphore Signals ? Do They Defining Amateur Radio ?
- - - The Times They Are A Changing !

While I can admire and respect an Amateur {HAM} Radio Operator
for Mastering Morris Code (CW).

Morris Code in and of itself does not define the Amateur Radio Service.

Morris Code
http://en.wikipedia.org/wiki/Morse_code

Continuous Wave (CW) Radio Transmission 'process' in
and of itself does not define the Amateur Radio Service.
http://en.wikipedia.org/wiki/Continuous_wave

The Amateur Radio Service is Greater than both Morris Code
and Continuous Wave (CW) Radio Transmission - IMHO ~ RHF

Boy Scout Merit Badge Requirements - "RADIO"
http://www.meritbadge.com/mb/093.htm
At one time when I was a very young boy nd a Boy Scout
I Learned to Send and Receive Morris Code at about 5WPM
-but- Then I also learned to use Flags to Send Hand-Flag
"Semaphore" Signals Too !
http://en.wikipedia.org/wiki/Semaphore_(communication)
Neither the ability to use Morris Code or the Semaphone
Flags to Communicate 'defined' Being A Boy Scout.

just an old boy scout at heart ~ RHF

Actually the Code that Sam developed is completely unlike the code we use on radio. What is tested for is the "International Morse Code" Sam's code was click based and radio is beep based.

DGN,

The Modern International Morse Code was invented by
Friedrich Clemens Gerke in 1848 and first used for the
Telegraphy between Hamburg and Cuxhaven in Germany.
After some minor changes in 1865 it has been standardised
at the International Telegraphy Congress in Paris (1865),
and later normed by the ITU as International Morse Code.
http://en.wikipedia.org/wiki/Morse_code#Modern_International_Morse_code

Vice the "American Morse Code"
http://en.wikipedia.org/wiki/American_Morse_code
Also known as "Railroad" Morse Code
-by- Samuel Finley Breese Morse
http://en.wikipedia.orwiki/Samuel_Morse

Morris-the-Cat knows Code :
mew-meow-meow-mew mew mew meow-mew-mew
meow-meow mew
http://www.swapmeetdave.com/Humor/Cats/Morris.htm

>

Actually that is not correct.
Within the original meaning of CW, the Titanic used a CW transmitter.
It was not a spark transmitter, the rf energy was produced by an alternator
which provided 'continuous' rf power, hence CW. The output was not a damped
wave that a spark transmitter would produce, but an interrupted 'continuous
wave' (from the alternator).

Regards
Jeff

Sam's original equipment used ink and scrolling paper to
record the dots and dashes because he didn't think an
ordinary human being could distinguish between the sound
of the dots and the sound of the dashes. He was wrong.
Human operators quickly discovered that they could distinguish
the difference between the down clicks and up clicks and
therefore distinguish the dots from the dashes.

It is true that Sam's "American" Morse was different from
"International" Morse in about a dozen characters but both
used dots and dashes. Still, more characters were alike
than were different.

The term "lid" may have originated from newbie Morse operators
laying a lid on top of the relay receiver to make it easier to
distinguish the dots from the dashes.

Please note that I didn't say ordinary human beings could read
telegraph code. All I said was that ordinary human beings could
distinguish between the sound of a dot and the sound of a dash.

I think that's a pretty safe assumption with "ordinary" in the
sense of an average human possessing average hearing abilities.
I would bet that a dog could even be trained to distinguish a
dot from a dash.

2505. Two Epson scanners at the same time (OS: Linux, MAC etc.)

Newsgroup: rec.radio.scanner

I've two scanners (Epson Perfection V750) and I would work on those
pair exactly at the same time because I want spread out scanning area
(after hardware modifications). OS doesn't matter (Mac OS, Linux etc.).

Please help me. MOD

Thanks.

Most people have problems getting Windows to recognize two scanners being powered up and connected at the same time on the same computer, so you will probably want to investigate the other OS's.

For the duration of a dash, spark is CW. Maybe slightly damped, but
still CW.

I said, "ask them to find a component by function". That's only vague
to those who don't understand simple English.

> not my fault you can't express yourself

Not in what you use for language but, then, I speak English.

>nor is a EE needed to be ham and contrube to advancing the state of the
>radio art

No one said otherwise - but refusing to learn anything shouldn't be a
criterion, and it certainly doesn't contribute to anything but sloth.

>the tests needed to cover those things THEN

>THEN they more os less needed to inculde Morse code (lathough it could
>have been avoided but for the treaty)

>times change

>adapt or die

Oh, I could pass a test on the technical aspects of communications as
it's practiced today. Could you? (Rhetorical question - I know you
couldn't.) And I don't mean could you memorize enough answers to
pass.

Back in the olden days a BA degree focused on art, humanities, language, sociology, etc.

Back in the olden days a BS degree focused on math, more math, physics, chemistry, biological sciences, etc.

The basic difference was M A T H ... M O R E M A T H ... then four or more semesters of C A L C U L U S.

In fifty years I've forgotten most of that MATH and Calculus stuff, but I still like to read about the humanities, history, sociology. That must mean something. My degree, like Cecil's, is a BS [That does not stand for Bull S...]

It's only been 43 years for me, but I've also forgotten some of the
math and I also like to read about some of the humanities. But I
still earn my living doing the BS stuff, although being a field
anthropologist does sound interesting.

SWL's should learn CW too.

You never know when you might stumple across a station in distress sending
an SOS and you might be the only one that hears it and can get help.

But it seems all SWL's want to do is sit around like blobs all day long
and tell themselves their cheap plastic Etons and Grundigs sound good.
They don't want radio skills if it takes a little work to learn them.

I'm guessing that's why Telamon hates CW and ham radio as well. Laziness.

CM,

Yes - Many Shortwave Radio Listener's (SWL's) do just that.
Listen to the best "AM" International Shortwave Radio
Broadcasters that they can 'hear' at their location.

and morse code is not on their mind ~ RHF
{ just like 'html' is not on my mind as i simply
type these words on rrs }
.

Shouldn't be a problem under Linux at least. Just run two instances of
your scanning software with the relevant scanner chosen for each one.

At the very least, the command line driven scanimage (part of the sane
backend download) can take a scanner device as a target source. Very
useful if you are scanning a batch the same size. Just set the
height/width and use the batch commands (intended for auto doc feeders but
you can set it to ask for a key press between scans while you change the
photo)

When i was a kid in the 60's a local ship to shore cw station could be
heard just under the local AM broadcast band station my family
listened to. That's what got my interest in radio going. The same
thing happens on short wave if you detune it right...
```

In that case the AM carrier is the BFO for the CW signal.
How many SWL's are going to accidentally "detune it right"
for the purpose of hearing an SOS?

You can hear the change in noise as a carrier goes on and off. It's
extremely difficult to copy high speed CW like that if the signal is
strong, but a weak signal or slower CW is just as easy to copy as
noise as it is to copy as a pure tone. T1 doesn't mean uncopyable, it
just means ragged tone.

So now amateurs and SWL's should be Morse code proficient
not only using tones but using the swishing sound made when
a BFO is not present?

If you can copy CW, you can copy CW. The tone it's coming in with
doesn't make much difference. I've copied signals so weak that they
were just changes in the quality of the noise and I've copied perfect
S9++T9 signals. They were all mostly R9. The R only changes if the
signal fades completely out or if there's interference that masks the
signal. Try that with PSK.

The swishing sound is coming from aliens. Try making the same sounds
back to them. You might get a more intelligent conversation going than
the one in this cross posted thread.

The pcr-1000 is usable via hamlib, I don't know how different the pcr-1500
commmand set is, but it should be doable.

Buy a pcr-1500 for me -- to test with, and I will add the needed code to
hamlib :)

CM,

OK - Lets make "CW" 5 WPM a High School Graduation Requirement
and Start the Nation-Wide Testing of Every Child at Every Grade Level
to Ensure that Our Kids Know "CW" ! ! !

We can call it the Uniform Education "Code" {CW} Law -and-
Require that No Child Is Left Behind the "CW" Learning Curve !

Why should only White Males 'know' CW ? ? ?
Equality Demands that Women and Minorities "Know" CW Too ! ! !
- - - We need an Urgent National Federally Funded Program
to Close the "CW" Gap [.]

oops - am i ranting ? ? ? . . . oh never mind ! ~ RHF
.
.
. .

Many SWL's are Ute listeners. They are the ones most likely to stumble
across an SOS.

Just like a person isn't a real ham unless they've passed a code test, a
shortwave listener isn't a real SWL unless their receiver has a BFO.

(SWL's who listen to shortwave with antique receivers are exempt.)

2549. "Data Skip" Feature: Enable It All Of The Time For Everything ?

Newsgroup: rec.radio.scanner
Date: 2006-07-21 00:00:27 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <XPSdnZbyXIK4hF3ZnZ2dnUVZ_sidnZ2d@comcast.com>
Source record: 8129

Hello:

Have a new 996, but imagine other scanners have this feature also.

Regarding "Data Skip", where the scanner will automatically
skip channels that it identifies as a data stream, or noise, rather than
voice.

e.g., channels with either no audio, or possibly a constant level audio.

Seems to me there is no reason not to have it on all of the time, for all
Systems, and everything.

Are there any Systems, modes, situations, etc. where having it Enabled
would not be a good idea ?

The Default setting is, surprisingly, OFF, which I guess implies having it
on for
everything maybe isn't such a great idea ?

Thanks,
B.

I'm not yet blind but I, like my father, am going deaf.
I couldn't hear a CW signal without a BFO if my life
depended upon it. I can't hear most of the CW signals
even with a BFO.

Cenla Frequencies is a small list of active frequencies for Police,
Fire Departments and Ambulances in Grant, LaSalle, Natchitoches,
Rapides and Winn Parishes. If you have any freqs for the city of
Pineville or Caldwell Parish, please post them or email them to me so I
can put them up on that page. Thanks.

It's better to cross-post to multiple groups than it is to single post in
each... Multiposting creates only ONE message, readable in all listed
groups. Single posting creates the exact number or messages as the number
of groups you post in. Saves time and space by cross-posting...

The dataskip function will many times see data or noise where there isn't any such as on a channel with a PL or CTCSS tone or background noise. When that happens, it begins scanning again right in the middle of the transmission and you will miss some of it.

Just thought you should know that.

Help save Ham radio and ignore Markie to save
usenet. Thanks

1- No more automatic renewals. Individuals must retest and pass all
elements required for their license class every ten years.

2- The passing score for written exams needs to be raised to 85%.

3- Code elements should be 13 wpm for General, and 20 wpm for Extra.

4- Make the no-code license one year non-renewable.

5- Cancel your ARRL membership until they decide to work to improve
things and stop them from proposing ham radio that is like CB.

Blow Code - your ideas will damn amateur radio and kill it. The ARRL is the best thing we have and all amateurs should join the organization to help preserve amateur radio. Forcing CW onto newcomers will only turn them away from amateur radio since CW is seen by outsiders as old-fashioned and out-of-date. This is the 21st Century and people do not want to be forced to learn and use and communication method developed in the 19th Century. Grow up and face reality. Stop clinging to your old buggy whip communication methods and get over the fact that amateur radio is changing for the better. It's going to change with our without you. You can stop change.

the idea the radio could contact the dead was bad enough in frequency
do you need to repeat it

but one of your other nicks is hey stupid so I guess we must expect
that

People today don't want to be forced to learn - whether it's CW, or
how to build a trivial little interface between a transceiver (modern
invention) and a computer (another modern invention), or some antenna
theory. Just hand them a license and a radio and they want to be on
the air.

>Grow up and face reality.

Reality is that ham radio is turning into a multi-band CB - just buy a
radio and get on the air without actually knowing how it works or how
to use it.

I'll agree with this - to a point. While hams "could" go about their hobby and be creative - making gadgets and so on to aid in their hobby or whatever else to keep the "electronics" part of it alive, many don't. Many just do as suggested, buy a radio and operate it - not doing another thing. Yes it can be a bit of a pain to design a multi band or even single band transmitter/receiver or transceiver - while they may not equal an off the shelf unit such as a Icom 706 or whatever, it does add to the fun of "Creating" and "Using" it. Yeah I know - like a car, who wants to build when you can buy. But if you've not built from scratch - try it sometime.
I've built many items and enjoy using them. They've also saved me umpteen hours of work to boot. I build only items I know I can get use of, not something I'm going to waste money on buying parts, time and labor and other materials - just to throw it in a drawer. IF you build something of use or convenience, you will appreciate it and desire to do even more. THAT is one way to carry out the Ham tradition EVEN IF you hate code and swear it off. I had to know code also for passing exams. I AM an examiner. I'm not "in love" with code, but then many are. To each their own. Radio is fairly diverse, it allows you to find your niche.

Technology in itself has to carry some blame - not everyone can repair the current type of equipment being sold. Not everyone has the tools and

necessary special soldering/desoldering equipment. Some of that can cost as much as a radio - itself. So, I say if ya want to at least "try" to participate in repairing your own, buy some older stuff, use it, repair it, ENJOY it. Enjoy using it AND being able to keep it alive.

I guess to make a point short and to the point - if you like ham - try to get as much out of the hobby as you can - after all - you took the time to get a license and spent the money to get involved. IF you don't like ham - maybe into CB, fine - learn what you need about antennas, coax, etc..... and get into your hobby that way. There IS something for everyone if they just LOOK. A hoby, regardless of it's nature - is to be ENJOYED.

absolutely and conpletely honest

how balanced is to to place CW over all over ham knowledge?

How progressive is it?

how freindly is it to advocate keeping the bands for yourself based on
your own self interest?

how loyal is it to denny the nation the benifits of allowing more
operators to aquire the expence needed to truely work on hf by focusing
on CW?

how patriotic is it to keep a staion forom aquiing the skill to be
ready for service to conutry and community?

Survival of the fittest.

The fit get a ham license. All the rest get cell phones, CB, and shortwave
listening.

Right you are, but there is one area where homebuilders can still
equal or even outperform commercial manufacturers: High power
amplifiers.

Amplifiers these days are so expensive to buy and yet so simple to
build that a lot of hams enjoying rolling their own. Anyone interested
should join the Amps reflector at contesting.com or the RFAmplifiers
group at yahoo.com, or both.

Don't expect to throw one together in a weekend, but do spend some
time learning the ins and outs of amp design and go for it.

Fun, fun, fun!

Bill, W6WRT

Ya, and you're not a 'real' bowler either unless you have a $500 bowling
ball.

And you're not a 'real' fisherman until you've caught a Marlin off the coast
of Mexico either.

It's only a hobby. If you don't like it, pick another one!

An alpha release of ID Tracker II is now available. This release currently supports the BCD996T scanner only. Although the program should work (at least for the most part), this is still a work in progress so use it at your own risk. The documentation has not been updated at this time. Please read notes before downloading.

You use what you can afford. I bought my first ham set up for like $50 used - it was all I could afford at the time AND I had to fabricate some things to boot. I got my feet wet with it and it kept me interested. Not everyone can afford the "best". It doesn't mean they're any less of a hobbiest in that particular field. "I" do not try to keep up with the Jones' as they say. IF my friend comes home with a brand new radio - it doesn't mean I'll run out to buy one. Same with a bowling ball, etc. That NEW radio, bowling ball, fishing (equipment) / expedition, hunting rifle - isn't going to promise a damned thing. Human intervention "still" counts. Take astronomy as a hobby..... there are bigger and better(?) telescopes supported by large universities or other groups. Still - many finds are done with the smaller back yard telescopes. It's not the size - the cost that count. The "user" has to do something to make it count. AND in many cases - be it finding a rare station on the bands, an asteroid, bowling all strikes, etc..... LUCK has a hell of a lot to do with it. Even the best in esperience and equipment - fail - sometimes.

Given a choice between a new H.F. rig and either an old boat anchor OR a homebrew rig to make a contact with, I'd pick the latter - hands down. It tends to give you a tad more pride using such old equipment that maybe you repaired or bought cheap OR built from scratch. Personally, I had an HW 101 and now have a TS440S (bought new when offered). If the Heathkit had as many bells and whistles as the Kenwood - only in the extra bands - I'd take it hands down. I love the audio of the tube radios over the newer radios. The Kenwood had an Autotuner - I could tune the Heath with an outboard tuner faster than that dumb autotuner did the Kenwood - in many cases. Point being, those older radios are not as sophisticated as the new stuff, but they sure still performed. Being new, being eh - better(?) isn't what it is always about. And even the homebrew stuff, be it solid state OR tube - when it comes alive with audio out of the speaker - or putting out that first signal over the air waves - there is no better feeling.

You have a ham license and buy a used rig - you're a ham. Buy a used bowling ball, go bowling as often as possible - you're a bowler. Go fishing as often as possible even with a $10 fishing pole, you're a fisherman. Pitch a tent with a sheet over a line - you're a camper. Too many people worry about "impressing" others. Do you do code? IF so, is it at 5 wpm or 60? WHO CARES - you're enjoying the hobby at your own level.

Code - CW........ a big argument over someone doing it or not........ WHY? When I got into Ham, I got into CW for a while, but then as now, I'm NOT in love with it. At that time, RTTY (Radio Teletype - for those who may not know) was still fairly big. Packet came in as did other modes. I "tried" RTTY - to me, as CW/Code is to some of you - it was BORING. You could also argue how RTTY could save a life. Any mode "could" under the right conditions. Someone may be aware of a situation and have had ONLY an RTTY machine - send the message to another with other equipment who then gets the help enroute to help the distressed. Let's say someone in a lighthouse seen a sinking ship and they only had the RTTY working. So - yes it may be far fetched but show how a "single" mode "could" "help" save a life. To bring it all together - again I say - you use what you have and to your level. IF you help save a life - congradulations. If you merely spend a quiet evening getting enjoyment out of it, more power to you. I would have found packet boring too, but it was before the internet got going hot and heavy - and it allowed me to get and receive "typed" messages to my friends who were licensed and so equipped.- just like e-mail for those of you who aren't familiar with packet. Pick a mode, try it - if ya like it - use it. If not, try another one. To each - his/her own.

By taking the test you're claiming that you understand the questions
and know the answers. By memorizing the answers you're not learning
enough to understand the questions.

But I wouldn't expect you to understand what "honesty" means.

>how balanced is to to place CW over all over ham knowledge?

No one is, any more than by requiring people to know the law one is
putting the law "over all ham knowledge".

>How progressive is it?

How progressive is it to not require people to know ... oh, yeah,
that's progressive, since the new thing is to hand out licenses
because people have some kind of "right" to get on the air.

>how loyal is it to denny the nation the benifits of allowing more
>operators

What "benefits" does the country get from more people using radios who
don't know the first thing about them? (Whatever "denny" means.)

> to aquire the expence needed to truely work on hf

You don't acquire knowledge (which is what's needed) by playing with a
radio.

>how patriotic is it to keep a staion forom aquiing the skill to be
>ready for service to conutry and community?

How does playing CB on the ham bands give one "the skill to be
ready for service to conutry and community"? Or any skill, other than
getting what you want? You don't acquire skill by doing something
that requires no skill. And you, particularly, don't acquire
knowledge by demanding something for nothing.

no, one is claiming they can pass the test

which is the only requirement
>
> But I wouldn't expect you to understand what "honesty" means.
I do know what honesty means and you don't employ it

>
> >how balanced is to to place CW over all over ham knowledge?
>
> No one is, any more than by requiring people to know the law one is
> putting the law "over all ham knowledge"
you certainly are

but no one is required to know the law at all merely happpening to obey
it is enough

the current system place CW over all over modes combined any statement
to the contary is dishonest
.
>
> >How progressive is it?

you statement makes no sense since obviously anyone that has a radio
and can turn it on knows at least the first thing ,if he/she can get on
the air he know a few more
>
> > to aquire the expence needed to truely work on hf
>
> You don't acquire knowledge (which is what's needed) by playing with a
> radio.
knowledge is needed why? It is helpfull I grant you but needed vs
experence
well that is Bullshit I know more I supect about radio and RF than you
having studied EM waves and their proerty at the College level and yet
this knowledge is only mildly usefull if I am on the HF bands as I
often am for Feild day or something to be a more effective operator I
need expernce at HF not knowledge of circuts
>
> >how patriotic is it to keep a staion forom aquiing the skill to be

> How does playing CB on the ham bands give one "the skill to be
> ready for service to conutry and community"?
what is playing CB mean? other than then pejoritive
>Or any skill, other than
> getting what you want?
babble all you like
> You don't acquire skill by doing something
> that requires no skill.
so you are claiming this is NO skill in passing traffic at HF I think I
could find people that woluld disagree with you
> And you, particularly, don't acquire
> knowledge by demanding something for nothing.
no knowledge is aquired by learning Morse Code certainly no secert of
the unverse is derived for it

No one is suggesting that ANYONE be given something for nothing
but it is a requirement of law that restictions in access to PUBLIC
reasources must be reasonable in nature

knowledge of Morse code is not realected to prevelegdes it brings ask
the Armmy how many CW opperators it uses in routine affairs, the answer
is zero (intel is not for this prupose routine nor is specail ops)

By releasing the Question Pools, the FCC is claiming that you must
memorize the answers.

No one is claiming any such thing.

> By memorizing the answers you're not learning
> enough to understand the questions.

Why not?

> >how balanced is to to place CW over all over ham knowledge?
>
> No one is, any more than by requiring people to know the law one is
> putting the law "over all ham knowledge".

CW is pass/fail. To fail CW denies all HF privs (except for Alaska).

> >How progressive is it?
>
> How progressive is it to not require people to know ... oh, yeah,
> that's progressive, since the new thing is to hand out licenses

Then why is it with the prospect of losing the CW Exam, that you'se
guys want to "beef up" the written exams?

> >how loyal is it to denny the nation the benifits of allowing more
> >operators

>
> What "benefits" does the country get from more people using radios who

It's always been that way. You could even buy Heathkits already
assembled. (and Get a context clue: deny).

> > to aquire the expence needed to truely work on hf
>
> You don't acquire knowledge (which is what's needed) by playing with a

Then the military has wasted billions of dollars over the years
"training" radio operators.

> >ready for service to conutry and community?
>
> How does playing CB on the ham bands give one "the skill to be
> ready for service to conutry and community"?

Who knows? That's not what Mark is talking about, is it?

> Or any skill, other than
> getting what you want? You don't acquire skill by doing something
> that requires no skill.

So it really is all about CW. Why have a written Exam at all?

> And you, particularly, don't acquire
> knowledge by demanding something for nothing.

The requirements for an amateur radio license have been all over the
map over the history of the service. The ORIGINAL amateur radio
license had no Morse Code Exam, even when Morse Code was the only means
of communicating.

Get over it. Everyone else is moving on.

Therein lies the solution to the problem. Make A1 the
only mode allowed within amateur radio - solves all
the problems, doesn't it? No more mode arguments, no
more band crowding, no more expensive equipment, ...
The list of advantages is virtually endless.

>> because people have some kind of "right" to get on the air.

>Then why is it with the prospect of losing the CW Exam, that you'se
>guys want to "beef up" the written exams?

We don't. We want to get back the level it used to be before it was
dumbed down to the point that you could almost pass it if you never
heard of the FCC, ham radio or electronics. Just by guessing at the
answers. It used to require that you draw (was it 3?) schematics.
From scratch. Let's see how many people could do that today. A

Colpitts oscillator, a Hartley oscillator and some other circuit that I've forgotten at the moment. They're still as relevant today as they were 50 years ago.

>> >how loyal is it to denny the nation the benifits of allowing more

>> What "benefits" does the country get from more people using radios who
>> don't know the first thing about them? (Whatever "denny" means.)

>It's always been that way. You could even buy Heathkits already
>assembled.

But you had to actually *know* a little theory to use one legally. Today all you need is the time to take the test and the money for the test and the equipment. IOW, a CB "license" with a tiny bit of annoyance up front. How does CB benefit the country?

>> You don't acquire knowledge (which is what's needed) by playing with a
>> radio.

>Then the military has wasted billions of dollars over the years
>"training" radio operators.

I trained operators when I was in the military. We didn't do it by giving recruits radios and telling them to go jam each other.

>> >how patriotic is it to keep a staion forom aquiing the skill to be
>> >ready for service to conutry and community?

>> How does playing CB on the ham bands give one "the skill to be
>> ready for service to conutry and community"?

>Who knows? That's not what Mark is talking about, is it?

That's exactly what he's talking about. Give someone a radio and a "license" to use it and he'll "acquire the skill to be ready for service to country and community". That's what Mark said, right up above. How does one acquire skill by playing radio?

>> Or any skill, other than
>> getting what you want? You don't acquire skill by doing something
>> that requires no skill.

>So it really is all about CW. Why have a written Exam at all?

You don't acquire technical skill by doing something that doesn't require technical skill. You don't acquire operating skill by doing something that requires no operating skill. And you don't acquire skill in CW by cursing into a mike.

But that's what Mark and his ilk want - we'll have "skilled operators" if we allow people to buy radios and put them on the air with no skill or knowledge. By osmosis? Or by magic?

>> And you, particularly, don't acquire
>> knowledge by demanding something for nothing.

>The requirements for an amateur radio license have been all over the
>map over the history of the service. The ORIGINAL amateur radio
>license had no Morse Code Exam, even when Morse Code was the only means
>of communicating.

So you'd get a license not knowing CW, build a radio (you couldn't buy one then) and ... what? Sit and look at it. Some things are just too obvious to need mentioning.

>Get over it. Everyone else is moving on.

Evidently not, or I'd be the only one in the world advocating that a test should actually test for something. There are actually millions of us who don't think lack of instant gratification is the worst thing in the world.

What next? DXCC awards for those who *want* to work 100 countries?

The disadvantages are too. No playing with digital modes. No
innovations. No new inventions by hams. And, I have to admit, my CW
has gotten a bit rusty - I doubt I could send readable code at much
over 15wpm these days. I can still copy faster than that, though.

nope that isn't what I am tlaking about

> Give someone a radio and a
> "license" to use it and he'll "acquire the skill to be ready for
> service to country and community". That's what Mark said, right up
> above.
lying again
never said anything about giving a license away

what was that you said about being dishonest

> How does one acquire skill by playing radio?
the only to aquire skill at using a radio is by USING a radio
>
> >> Or any skill, other than

meaning no need for a CW test?
> You don't acquire operating skill by doing
> something that requires no operating skill.
no need for writeen test either thn?
> And you don't acquire
> skill in CW by cursing into a mike.
who siad you did

but I for one have no interest in learning CW at all even if that were
possible for me (which I do not believe is the case bt that is another
arguement)

you OTOH seem to think it polite to disparage opertors that you likely
have never heard
>
> But that's what Mark and his ilk want - we'll have "skilled operators"
honestly in time if we did give the license away the user would
develope skill with it
> if we allow people to buy radios and put them on the air with no skill
> or knowledge. By osmosis? Or by magic?
the same way the skill were devloped in the first trail and error would
still work althogh I don't advocate reling on it
>

on here there are perhaps 3 people still advocating a Morse code test

OTOH nobody advocates ywe drop testing except occasion the frustrated
advocate of Code testing

Yes personalyI think some the thing we current test are at best
questionable I would prefer to foucs more on rules and safety question
I realy don't think any body needs to memorize thatwhat freg is white
in SSTV signal he know prehaps where to look it out but to have that
knowledge memorized no way and yet there is such a question on the
current extra pool
> There are actually millions
> of us who don't think lack of instant gratification is the worst thing
> in the world.
what has that got to do with maintining your frat house game called
Morse Code testing?
>
> What next? DXCC awards for those who *want* to work 100 countries?
who cares about a DXCC award? I certianly don't realy

or does not caring about working "countries that have no people in them
and sometimes barely exist at high tide make me not a ham either

Are you fucking stoned???

If it weren't for no code, there would be no new Hams! Another 20 years and all you legitimate code endorsed hams will be dx'ing with the worms. We have to go with the times fool!

We've already lost 80% of interest to the Internet and all the IM's email and all.. You clearly are living in the dark ages..

If we are to save amateur radio at all, we need numbers. We've already lost too much spectrum due to the lack of use. So what if no code'rs gain access to HF? It's either that or we loose HF to the commercial interests.

I took the 13 and used code a grand total of one time in the last 16 years.

Asshole.

How else one can know that the unit of resistance
is the "ohm", except by memorizing?

Oh? Then you're in favor of REAL testing about digital modes? Like
questions on how Rayleigh fading limits bit rates on HF? That sort of
"the times"? (Or didn't you know that, without frame shifting,
digital modes cause problems on HF?)

Or are you one of those who favors as little testing as can be gotten
away with?

>If we are to save amateur radio at all, we need numbers.

So you'd rather have millions of unqualified hams who know nothing
about radio than a few hundred thousand who do. We already have a
Citizen's Band - we don't need a dozen more of them.

The drop would have been far worse than it is now had the CW testing
speed not been reduced.
>
> Oh, wait a minute - the numbers didn't START decreasing until code was
> eliminated.

Sorry Al, but the drop of CW came around the explosion of the Internet.
Young people see our hobby as outdated and the CW testing requirement
reinforces that. What to see a huge drop in licenses? Bring back CW
testing for all licenses and raise the speeds again. There will be
hardly any new licenses issued if someone made such a gross and stupid
error in judgement.

CW testing has nothing to do with knowing how the radio works or how it
operates. Thanks for reinforcing some of my previous positions.

The ham bands were filled with idiots when we had all that CW testing.
CW testing has never kept out the idiots and never will.

Besides, since the US is a democracy, the ham bands will turn into whatever we let it turn into because the majority rules and CW freaks like yourself are increasingly in the minority.

Yup, that's what I also believe. Get people into the service and they
will start learning what they need to know on their own.

We already have a
> Citizen's Band - we don't need a dozen more of them.

Actually the CB argument is really old. I got a CB radio for a trip two
years ago so my 20 something daughters could talk on it. The reality is
that hardly anyone is on CB either. Channel 19 was pretty quiet
compared to what is sounded like 20 years ago.

So not only are people avoiding ham radio, they are also avoiding CB.
Find a new argument Al for keeping people out of ham radio will you?

More importantly, that you can only transmit on 7.000 to 7.300 mHz, with restrictions on mode and license class. Or that you call "MAYDAY" on voice or SOS on CW for emergencies and never, never, never call "breaker, breaker".

Going back to the orginal point of memorizing or not, is knowing the type of oscilators and drawing their schematics anything but memorizing?

Actually, the only MORSE code you need to get help is SOS (not even run together as one letter). If you keep sending SOS, SOS, SOS, someone will eventually hear you and track you down.

Note that the original intent of the morse code test was that amateur radio was to provide a pool of ready trained radio operators in case of war. I'm in a country in the middle of a war, and I can guarentee you that NONE of the radio communications are morse code.

In fact, until we took out the cellular towers in Lebanon, almost all of the Hizbolah's command and control traffic was via cellular phone.

Geoff.

JTFEX going today; "Solid 02" up
````````````````````````````````

It is Mon, 9:34am EDT (1334z).
At about 9am (1300z) this morning "Solid 02" departed MacDill AFB. I
am fairly certain that this is the RAF E-3D AWACS aircraft (ZH104) that
I heard going into MacDill on Friday using the callsign "Ascot 7058."
At that time I conjectured that he might be here for the JTFEX-06
exercise.
Well, a short while ago Solid 02 (British pilot) was up with Sealord,
first on 284.5 and then on 267.5. He explained he was out of MacDill
AFB and was en route to W-122 for the JTFEX exercise. I also heard him
using 327.1, the Jax Ctr high-altitude freq in the Daytona Beach area.

------------ REPLY SEPARATOR ------------

JDB has the answer. A ham license should be like a learner's permit
for driving; proof that you know enough to get on the road and not
kill someone, not proof that you have mastered all facets of driving
any kind of vehicle.

If you can show you know these basics, I would give you a license:

1. Know the band limits.
2. Know the power limits.
3. Know how to tune up an amp.
4. Know how to recognize when something is wrong.

There could be a few more, but you get the idea. Knowing how the
Bayseian something-or-other affects HF propagation as someone
suggested can come later, much later.

Not knowing the "distances" involved - any chance they may be using YOUR
cell towers? IF so, that could really suck. Nothing like having your enemy
use your own equipment against you.

Lou

There's a difference between knowing that the unit of resistance is
the Ohm, and remembering that the answer to the question about
Kirchoff with the 3 resistors is 10,000 ohms.

someone could memorize that sort of detail I spuose but you nor your
friends have ever advanced any evidence that this occurs Indeed I
don't think it is possible to memorize enough to pass the test and
learn nothing in the bargan I can't prove that of course but it does
seem likely

We have to keep trying to save Ham radio while we still can because once it's all the way in the shitter it will be even harder to pull back out & clean up.

A Ham who'll stand for nothing will sit for anything. I won't accept more dumbing down.

Help save Ham radio:

1- No more automatic renewals. Individuals must retest and pass all elements required for their license class every ten years.

2- The passing score for written exams needs to be raised to 85%.

3- Code elements should be 13 wpm for General, and 20 wpm for Extra.

4- Make the no-code license one year non-renewable.

5- Cancel your ARRL membership until they decide to work to improve things and stop them from proposing ham radio that is like CB.

Terrible idea. The only way to get ARRL to change is to get involved in the
politics of ARRL and work to try to effect the changes that you want.

You're most likely correct on getting into the "politics" of the ARRL to "try" to get anywhere. But, good luck. It is more like a "good ole boys club". Anytime I've ever seen any reps to the area at a hamfest - they acted like snobs more than trying to communicate with hams of their concerns OR to try to win those hams who weren't members - to become members. If the rep couldn't give me the time of day, the ARRL didn't need my money either. I stopped my membership when it was due for renewal. That was a good 15 years ago or better. How did the rep act like a snob? He turned to his bud who was with him behind the table and ignored others "trying" to gain his attention and talk to him about whatever. Oh - he may look and say Hi, but god forbid you interrupt his conversation with his buddy. So much for the "MEET YOUR ARRL REP HERE"

lou

>hardly any new licenses issued if someone made such a gross and stupid
>error in judgement.

The drop started MANY years before CW was dropped. Want to increase
the number of hams? Eliminate cellular phones (a lot of people got on
the air to have communications in the car) and the internet - since
those are two of the prime causes of lack of interest in ham radio
today.

>CW testing has nothing to do with knowing how the radio works or how it
>operates.

But many of the same people who want to eliminate CW also want to
eliminate any tests that would really test for knowledge. It's not CW
they want to eliminate, it's effort. You can cheat on written tests
but, since you can't cheat much on CW (although some have), they want
it eliminated. Not just kept for one class of license. What's wrong
with code-free HF, but an additional class with, say, a 20wpm CW test?
It would have nothing to do with the number of people becoming hams.
But those who are opposed to CW testing are opposed to ALL CW testing.
Getting on the air - with the highest class license available is, to
them, their right.

It's like people who are adamantly opposed to having driver's licenses
revoked because "driving is a right".

Sorry, but getting on the public airwaves is not a right.

>Besides, since the US is a democracy, the ham bands will turn into
>whatever we let it turn into because the majority rules

Democracy is a form of government that protects the minority from the
excesses of the majority - the majority doesn't need protection from
itself.

What color is the sky on your world? (If you were correct, most CBers
would have a pretty good knowledge of electronics and propagation.)

>So not only are people avoiding ham radio, they are also avoiding CB.

So how does CW enter into things?

>Find a new argument Al for keeping people out of ham radio will you?

Oh? It's not MY argument that CW keeps people from using radios, it's
YOURS! And you just destroyed your own best argument.

The sign reads, "Instant Gratification". Buy the equipment and be
able to put it on the air immediately.

It wouldn't surprise me if, in the not too distant future, one will be
able to buy a ham transceiver, create call letters out of one's
initials or something and legally be on the air while waiting for the
real "ask for it and you get it for a fee" license.

... and new aircraft pilot license requirement: Demonstrate an engine start by spinning the prop -- by hand. Even if you intend to fly only jets, some old "prop-job" might be the only thing that can get through in an emergency.

I wonder: Did the radio amateur community go through anything like this for the transition away from spark?

I can't for the life of me understand why there is so much concern over learning code. After 20 yrs in radiation physics (ionizing, not RF communications) as a living, I finally decided to go for an amature radio license. It wasn't until I got here that I learned about this rift in the community (I have seen it in a few places)....granted it may be a few spirited individuals on each side that perpetuate this argument of learning code. I'm very dismayed by this rift, I wanted to join a fellow group of RF communication enthusianists. I don't need a segration here too...there is enough of that society already, I don't need that in a hobby too. I hear my family calling....thats were my time needs to be spent.

Source record: 8015

10 years ago this month a terrible war broke out on this newsgroup called the "Bill Cheek War". Several threads were flying across this newsgroup with the main thread called "Bill Cheeks is an asshole" which broke newsgroup records for the longest lasting thread ever (about 3 months). This was a serious war that lasted roughly 2 years, with the primary problems being the first several months.

http://groups.google.com/group/rec.radio.scanner/browse_thread/thread/7ccb7a99f2443ea2/c7d5b94a673af4e5?lnk=st&q=&rnum=1#c7d5b94a673af4e5

The war on this newsgroup became so massive that many people thought it would cause the demise or collapse of the newsgroup. Several people called for the newsgroup to be disbanded while others suggested it be moderated. Many people simply left the newsgroup. Several people had their identities stolen and/or were the victims of email-bombs.

http://groups.google.com/group/rec.radio.scanner/browse_thread/thread/5a155380e4674436/88b7484162d50b63?lnk=gst&q=moderated&rnum=2#88b7484162d50b63

http://groups.google.com/group/rec.radio.scanner/browse_thread/thread/6e9b0570155f33f4/94836be2db3dcf30?lnk=gst&q=email+bomb&rnum=2#94836be2db3dcf30

The war was caused by a person who refused to compromise (which he called (ZERO tolorance) and caused many people to respond in attempt to salvage the integrity and fairness of this newsgroup. The person and his supporting group for him was called "Cheek-A-Likes" or "CAL's". Due to the threats and retaliatory actions that were dispensed to those to did not behave in a way that the CAL's deemed acceptable, a handful of key people stood up for the decency of this newsgroup.

Had it not been for the brave people who stood up to defend the integrity and freedom of this newsgroup, it is very possible that this group would not be functional today. Thank you to those veterans who stood up for this newsgroup.

Why? I assume you really mean that the current crop of new hams needs education. Have you done anything? How many new hams have you elmered?

Are you active on 2m? Do you speak to new no-code hams and offer to teach them morse code, let them see your HF station in operation? Have them assist you during contests?

If all you do is hang out on the HF bands, and complain about how bad the new hams are, they will stay that way. Whose fault is that?

73,

Geoff.

A few dozen over the years, maybe over 100. I never kept count. Do I
still do it? No, the people I elmered are elmers now. And some of
the people THEY elmered are elmers. It's time I hung up my "elmer
spikes".

It is Tues 8:52am EDT (1252z).
For the second consecutive day, the RAF E-3D AWACS aircraft has
departed MacDill AFB and says he is "heading to W-122 to work with
Giantkiller for JTFEX-06."
This is E-3D ZH104 who arrived at MacDill on Friday as "Ascot 7058."
In my posting yesterday I identified his callsign as "Solid 02," but
later in the day yesterday and this morning I heard him more clearly,
and his callsign is "Selex 02."
He has just been handed off from Sealord's 267.5 to Jax Ctr's 327.1.

Really? My other hobby is model trains and I have never seen a rift in model trains in 45 years.

Ham Radio has rifts only because some people feel they are better than others and try to impose their will and superiority over others. Usually over a CW testing requirement, being able to repair old, outdated tube crap, and how fast one can send and receiver an old mode of communication. They feel that just because someone can't send and receive CW that they are somehow inferior. It is such foolishness. But hang in there. These old, unbending old-timers are dying off and eventually hams will all be united again promoting the service/hobby and joining the national organization in support of the service/hobby. I guess that's why God does not have people living forever. Death has a way of cleansing the hobby of the old, outdated, and outmoded.

doubt it all you like

figure the path with any precison no, but I am can use the various
charts to know know I need to contact various types of stations

theseday 100w a 13b2 a preamp and you are able to pick up the larger
stations, and they can hear you

why do Ineed to be figure the path loss when I can determine the
parameters for sucess.

I honestly don't care how much of the signal islost along the way

I care wether a readble signal reach the otherside

In 1964 I passed the 13 WPM test on the first try at the Dallas FCC office.
I was 14. There are plenty who can top that, I'm sure.

The rulemakers "stabbed themselves in the back with their own ballpoints"
(To quote an article from Electronics World in 1962.) when they created CB.
But, as said article went on to point out, the industry needed a shot in the
arm. That article has stuck in my head to this day.

This isn't about creating the best operators, it's about selling the most
junk and having the most votes.

Al, you and the rest of the old farts want CW to keep ham radio from becoming like CB - right? CW does not keep people from using radios, it keeps people from seeking a amateur radio license. You and the rest of the crusty old and out-dated hams think that CW is kind of a filter or the price of admission. It's an over-rated and over-priced ticket.

CBers do not have to have a good knowledge of electronics and propagation to use the radio because there is little else for them to venture into - unlike ham radio. But then again, there are darn few CBers anymore. You, like many other crusty old hams, hang onto this notion that there are so many CBers out there and that the CB band is still out of control like it was 25 years ago. It's not. It's somewhat quiet as people have left CB behind just like they are leaving ham radio behind - but each for different reasons. CB because cell phones have replaced its usage and the speed limit isn't 55 anymore. Ham radio has been left behind because of its image as a hobby for morse code freaks and glowing tubes. The CW testing requirement just reinforces that belief.

Old fart crusty hams like yourself who continue to promote CW and CW testing keep reinforcing the belief that the hobby is old and crusty like yourselves and keep people out in favor of other interest where they don't have to take a test to get involved and have fun.

I am not destroying any argument, you just cannot follow simple logic. Face it, we can spar back and forth on this forever. The reality is that CW testing in the US is going to die soon. You cannot stop the change. Most of the rest of the world has already changed - the US cannot be far behind. Be it now, or ten years from now, CW testing is going to be gone, out of here, adios, good riddance and so long. Hopefully it will not happen too late. The longer the CW requirement remains, the closer ham radio is to death.

So which is *really* the best gauge to model? Is it okay if you buy
kits, or aren't you a real rail hobbyist unless you make at least all
your cars from scratch? Or do you have to build your own engines from
scratch too? Etc., etc.

<duffyb01@nospamfuse.net> wrote:

>Al, you and the rest of the old farts want CW to keep ham radio from
>becoming like CB - right?

Wrong. I want ham radio to stop being what it's been for the last couple of decades - CB on different frequencies. There are CBers who are competent communications engineers, but the majority today - CB or ham band - want to buy a radio and put it on the air. Any license requirement is just an annoyance they get around any way they can - except by actually studying and learning enough to pass tests.

Take a close look at a General test from the 50s and one from today. The difference isn't that the current one dropped old technical questions and added equivalent questions about modern modes - it's that the current test has dropped the technical requirement low enough that it's a joke. Everyone says that CW is old hat and modern modes have replaced it. Okay - let's see a question asking for a PSK interface schematic, including full isolation. That's just simple audio and DC stuff. Let's have questions on Rayleigh fading and its effect on maximum usable baud rate at various frequencies, so no one complains about the FCC not giving us permission to run 9600 bps on 20. Modern stuff.

And no more published answers.

Then let's see how many people talk about "modern" and how many yell "too difficult - there's no reason to know all this stuff". Which is why, on SWL fora, you'll see people complaining that they listened all day on 4.2 MHz and only heard noise. Or tried to get some foreign broadcast station up above 15 MHz all night and couldn't.

It's the "why doesn't this work, and don't give me any of that technical BS" syndrome. People don't want to know how things work, or why they don't work, but they're angry that they don't. And don't you dare tell anyone it's his fault for trying to receive a 440 repeater 80 miles away with a 1/4 wave antenna 5 feet off the ground. His friend, just 3 doors down, copies the repeater S9+ (with a dual 11 element beam 75 feet in the air and LMR600 coax). Now, without any technical BS or monetary expenditure, what does he have to do to receive it?

It's not that no one ever pulled that stuff 50 years ago - but it was so far in the minority that it was below the noise level. Today it's

the majority of newcomers. "I have a right to use the public airwaves, and I don't want to have to learn anything."

why do you need to know that in order to operate?
to just get on the air..
Understand in the case you mention is NOT required only obeinace
understanding hopefully comes later

different folks come to different levels of understanding about
different subjects at different time

the license is a permit to learn not proof you have learned
you convince of the need and I will support you
>
> And no more published answers.
NO can do the court have more or less so, along the long standing body
of the FCC not chaleanceing Bash et all years ago to close the
quiestion pools NOW would more or less require an act of Congress or a
change in ITU treaty lang. It took us No Code what 4 or decades to
acheeve the changes we needd in order to bring off No Code

Funny all I heard of Ham radio for many years was the "wizards of 80M"
all code tested hams

I have never heard any realy bad behavoi r from any ham that hasn't had
his license renewed at least twice (which leaves out ALL No code techs
BTW)

indeed I have never heard the sort of Vile lang I have heard from that
bunch on CB perhaps midwestern Cber are just different prehaps you are
just full of it

the hobyy is dying have you been following the threads about ars
numbers have you looked at the ages of folks at hamfests

although yes the copmanies need a bigg enough market to stay in busness
too

> much nicer than "the manufacturers need more money".

Listen!

"THE MANUFACTURERS NEED MORE MONEY."

"THE MANUFACTURERS NEED BIGGER MARKETS."

"THE MANUFACTURERS NEED MORE ..."

Design and manufacture of any electronics item requires a market to recover design costs, to recover manufacturing tooling costs, to cover distribution costs, to provide a return on investment, to provide a return on equity, to provide net profits to cover medical insurance, to provide net profits for stock retirement plans, to feed the engine of the economy.

The cost of a single DSP chip that operates at high i.f. frequencies has to be recovered or the chip designer goes BANKRUPT. How many radios must be sold to recover a million dollar investment in a single chip?

"THE MANUFACTURERS NEED BIGGER MARKETS."

Follow the money. Understand our hobby/public service!

Finally then, the question becomes not whether we are appliance operators [most of us are], but do we wish to advance the radio art? "How do we advance the radio art?" is a complex question with many answers.

Is preserving historic skills part of the art? Is operating AM, when most HF is SSB, part of the art? Is ragchewing part of the art? Is EME part of the art? Is old fashioned RTTY part of the art? Is current digital communication part of the art [most of today's digital is actually ancient]? I say NO!

But, taking the time, using the energy to learn, investing our money in technology and learning that technology is contributing to the art. Or, is it?

/s/ DD W1MCE

red herring alert

Part 97 does not define Ham radio, Part 97 defines the rules

WE define Ham radio

wrong if I run more than few buads over 100 (or under for that matter)
nobody is going to be answer to since it is not one of the standard
speeds

the why is irelavant In this case I would venture to say you are wrong
I supect you could run 110 on 20m after all rules are normaly set a bit
on the conservsitive side you don't becuase people aren't looking for
that speed and therefore are unlikely to make a concent

if it were just and FCC it means maybe someone would be there to bust
you if it truel is pphysics does not not

what speeds you packet at on 20 requuires NO understanding merely
obeinece to the rules

>
> >Understand in the case you mention is NOT required only obeinace
> >understanding hopefully comes later
>
> How do you begin to understand WHY you can't run more speed on 20 by

you don't need to understand

you may choose to learn in which case more power to use, but you are
not required to learn this point
>
> >different folks come to different levels of understanding about
> >different subjects at different time
>
> you're saying that not everyone is equal.
no I am not I am saying everyone will develope differently
we all equal in our rights before the law
>then why treat everyone as

> if everyone were equal?
>
> >the license is a permit to learn not proof you have learned
>
> The license is a permit to operate. Whether you ever learn anything
> after you get it is totally irrelevant to the license.
a very grave difference and resaon why the ARS is in trouble this
difinate split in philosophy
but the point is what level is required to operate

that level is easierly obtained with little real understanding

indeed wether you learn anything after matters not to your stauts as a
license holder
>
> >> And no more published answers.

> Which part of any treaty says that the answers have to be published?
I made no such claim
I claimed that amending the treaty was one of the few means to Close
the question pools off
the pools are open becuase the FCC felt it could no longer support
legaly (or practicaly) keeping them closed.

an act of congress closing them or enacting an ITU requirement that be
closed is about the only to close them at this point

> Quote it.

Yah friggen right, NOT! Continuing to stay knowledgable and re-testing won't improve things? Sheesh!! What's your problem then, If licensees remembered what was on their exams ten years ago passing the exams again should be a breeze. Of course, if they don't rememeber, they'll have to study again. This will make better hams. And the fact that this requirement has never existed in the history of ham radio doesn't make it a bad idea. You're just Lazy.

It DOES make a difference. It maintains the number of ways we can exchange information, and as a filter to keep out some of the riff-raff allowing you better enjoyment of the service.

>>
>> 4- Make the no-code license one year non-renewable.
>>
>
> Probably wouldn't make any difference.

Of course it WILL make a difference! It creates an incentive to keep studying and building on radio knowledge & skill by requiring an upgrade after a year. And we end up with more knowledgable hams. How can that be bad?

>>
>> 5- Cancel your ARRL membership until they decide to work to improve

The ARRL knew what it's members wanted before restructuring through surveys of the membership, then did you read the proposal that came out with? Totally opposite of the feeling of the membership. Google it, we discussed it long and hard years ago when RRAP groupies actually argued policy. The ARRL is only interested in padding the corporate bank account, they don't care about the quality of amateurs getting licensed. Our HF bands can sound like CB if means the ARRL can get more money. The ARRL BOD stapped Hiram Percy Maxim in the back. The ARRL doesn't care if you know anything about radio.

We don't have to leave or complain if we can improve licensing a little.
That's what's happening here. Striving for quality.

BTW: Stay strong and safe over there. I support you. Don't stop the
mission until the job is done because if you stop early, you'll just have
to deal with the problem again later and it may be even harder and uglier
to do next time. I think most American's support Israel, but you could
never tell that by watching are liberal main stream media.

And you want ham radio defined like CB. Ten-Four Good-buddy?

Dumbing things down cheapens it, and destroys others enjoyment. Look at
the childish bullshit you do in RRAP. You and the other rejects drove
everyone away with all your retarded bathroom hummor.

That's want will happen with on our HF bands, as it sounds more and more
like CB, good hams will give up on it and leave. Many already have.

Not hardly. Every time they change the pool, I get an up-to-date study guide just to keep current and see what's new. Could pass the test any day of the week and twice on Sunday. By the way the exam has changed in 10 years. There is some common stuff but there is also new stuff.

However, the biggest problem would be manpower for conducting the tests. Based on the current number of hams, that would be over 60,000 people retesting every year. The existing test system (and the prior systems when things were administered by the FCC) were all designed around the single testing concept. Essentially, it would mean almost every VE team would need to conduct test sessions weekly or hold huge test sessions monthly. There just aren't enough of us to do that. Plus many facilities now charge for the use of the facility. And the bigger the room, the higher the fee.

I believe in keeping a basic test simply because a person can't determine if they will like code until they've tried it. Plus it is one of the basics of radio. If they have the basics and have thus learned it is not a big, scary hurdle, they will be willing to pursue it in the future since they already know it at a basic level.

The filter argument, I consider totally bogus.

Code is either a basic part of ham radio or it is not. That should be the criteria for determining if it should be tested.

In today's climate, it will not be an incentive. Those who want to upgrade don't need the non-renewability clause. The rest will simply let their licenses lapse. Those who would let it lapse aren't on the air enough to contribute anyway.

So why don't you go run for office and promote your platform? Or form your own lobbying group? Complaining here won't get it done. If you want your platform to prevail, the YOU have to do the work to convince people. While the ARRL proposal was not what I wanted, it did indeed reflect some of the things that a significant percentage wanted.

As far as the ARRL padding the corporate bank account, if that is true, then you need to report them to the IRS as non-profit organizations are not allowed to do this.

Why learn arithmetic or math at all? Spelling and grammar seem to be
old-fashioned. Letz ghuct spel theengs thu wae thay soun. Maybe we
can even make ourselves understood once in a great while that way.

Digital modes are great - for someone who spells the words you
understand the way you were taught to spell them. CW seems to work no
matter what the accent or native tongue.

But people don't want to learn digital modes either - it's just one of
those things that sounds like a good argument until you actually look
at it. How many hams can actually read a waterfall display for
anything but PSK? And not that many can even do that.

really then why I am racking EME qso's my station needs ground gain to
complete the contacts so I get only about 40 minute at moon rise and
moon set but I have bagged a QSO everytime I have tried (and near the
New Moon at that)

No Al, those are not arguments that take place with the model train hobby. The best scale is what is best for you. Unlike ham radio, no one tries to ram something down another hobbyist's throat. Same for buy vs. build. Not a discussion. You do what you want to do and no one is critical of the other. The way it should be in ham radio.

You were that kid on the playground that always thought you were better than all the other kids and you tried to get other kids in fights didn't you Al? You seem to be always looking for confrontation.

At least we agree on something and nice to see you admit that everyone
is now saying this.

> have replaced it. Okay - let's see a question asking for a PSK
> interface schematic, including full isolation. That's just simple
> audio and DC stuff.

Yup, it is a simple circuit. It's also readily available in books, the
Internet, etc., so how does memorizing the circuit to pass a test, make
you a better ham?

>Let's have questions on Rayleigh fading and its
> effect on maximum usable baud rate at various frequencies, so no one
> complains about the FCC not giving us permission to run 9600 bps on
> 20. Modern stuff.

"Rayleigh Fading" - that comes up in daily discussions on the radio.
Never heard anyone complaining about not being able to run 9600 baud on
HF - who the heck to you hang around with?
>
> And no more published answers.

Why not? Memorizing answers has people learning just like reading a
book. Learning is learning.
>
> Then let's see how many people talk about "modern" and how many yell
> "too difficult - there's no reason to know all this stuff".

That's true, many of the things I had to learn for my test in the 1970s
was worthless in my opinion. But it was conceived by people who had the
same outdated opinion as you. Let's get people communicating and not
continue to figure out ways to make it so hard that new people do not
come into the service. Here's the choice for kids today. Learn code and
other crap to get a license to use a ham radio - or - get on the
Internet immediately where everyone is and communicate with them. Guess
what choice is being made Al - it's a no brainer and why our testing
should be a no brainer.

> Which is
> why, on SWL fora, you'll see people complaining that they listened all
> day on 4.2 MHz and only heard noise. Or tried to get some foreign

I won't because those discussions never come up in our area. Where the
heck do you live that you have these discussions with so many people?

> receive it?

Something tells me he'll figure it out on his own, via another ham, the
Internet, etc. and he'll learn - learning without being forced is a
wonderful thing.
>
> It's not that no one ever pulled that stuff 50 years ago -

Yup, that's true, and all those strict technical tests back then did not
prevent this from occuring.

>but it was
> so far in the minority that it was below the noise level. Today it's
> the majority of newcomers.

No proof of that statement Al. Just something in your own mind.

"I have a right to use the public
> airwaves, and I don't want to have to learn anything."

Is this a great country or what?

That's the way it *is* in ham radio if you look at it through the same
glasses you're looking at model railroading through. You want to use
different scales to weigh the same thing, then claim it weighs a
different amount? Sorry, but I don't play that game.

>And what is wrong with that?

What's wrong with ham radio being turned into CB? For one thing, we
already had a couple of citizen's bands - we didn't need a dozen more.

>> Any license requirement is just an annoyance they get around any way they can -
>> except by actually studying and learning enough to pass tests.

>How does "passing tests" going to eliminate the problem?

For them? It's not. If they can't pass the test they don't get the
privilege. That's just the way life is. If you're not 75 inches
tall, we don't let you be 6'3". These days some people want to be
what they aren't, regardless of reality. Giving ham licenses to
anyone who wants one doesn't make hams of people who know nothing, it
makes the ham license worthless.

>> Take a close look at a General test from the 50s and one from today.

>you a better ham?

Understanding how it works makes you more knowledgeable. Evidently
you're one of those who needs things repeated a few times.

>>Let's have questions on Rayleigh fading and its
>> effect on maximum usable baud rate at various frequencies, so no one
>> complains about the FCC not giving us permission to run 9600 bps on
>> 20. Modern stuff.

>"Rayleigh Fading" - that comes up in daily discussions on the radio.
>Never heard anyone complaining about not being able to run 9600 baud on

You never listened to QSOs on 20? Or questions asked at ham club
meetings? Or in radio fora?

>> And no more published answers.

>Why not? Memorizing answers has people learning just like reading a
>book. Learning is learning.

Learning requires understanding. Memorizing isn't understanding. It
was proved over 100 years ago that rote memorization isn't even a
mediocre way of teaching.

>> Then let's see how many people talk about "modern" and how many yell
>> "too difficult - there's no reason to know all this stuff".

>should be a no brainer.

So let them get on radio immediately with no testing. The method has
been available since the 60s.

IT'S CALLED CB! You want HF? Get on 11 meters. You want UHF? Get
on 465. It's all there.

And leave ham radio to hams.

>> Which is
>> why, on SWL fora, you'll see people complaining that they listened all
>> day on 4.2 MHz and only heard noise. Or tried to get some foreign
>> broadcast station up above 15 MHz all night and couldn't.

About like everything you've said here.

>"I have a right to use the public
>> airwaves, and I don't want to have to learn anything."

>Is this a great country or what?

Yes, if you're in the bottom 10%, it must surely look that way. You
get to be in the top 10% merely because that's the way you want things
to be, and heaven help the rest of us if we don't give you your way.

As opposed to making a ham license something anyone can get merely by
asking for one - because, like you, they don't have the intelligence
to pass a real test.

Hello:

Is APCO 25 the same as P-25 ?

Are either digital ?

If so, are all of the listings under APCO 25, or P-25, always digital, or only some sub-set of ? Which, etc. ?

How do you know which are digital ?

B.

If you place a large sheet across two scanner beds there will be an
inevitable gap in coverage.
Ergo I have no idea what you have in mind or how it would be in any way
better than stitching together sections of the sheet scanned on one machine.
I have done the latter many times and with a decent panorama program, like
the one built into CS2, seamless results are not difficult to obtain.

I agree...But today's kids just don't have the aptitude or need for a
hobby that was once the only active hobby which instantly joined others
around the entire world with the same common interest on a technical level,
as well as a communications level, and a sense of accomplishment. There are
simply too many other high-tech hobbies to choose from today.

TV video games come to mind...Satellite TV and communications, cell
phones, FRS radio,XM radio, cheap long distance, DVDs, Ipods, etc., etc.,
etc., etc.

in point of fact they do

the method is different it can be observed by studing RRAP lately the
Linear (slptter box box design) work be the sender sending the same
sort of crap (so and so is rapist child moelstor so on) over and over
again till the target either gives up the net or is forced to repond
with something (in my case I have tried suggesting the jammer "get
help" now I am trying praying for him)

Thanks Mike, but the Pro 34 was not listed there. In any case I tried both the Man, 2, 9 procedure and the 2, 9 procedure alone and the Pro 43 Clear, 0 method and nothing worked, all frequencies still there. Don't know if for some reason the Pro 34 is different.

Are they talking about APCO25 encryption of EVERYTHING? That's ridiculous and outrageous.

Many confuse encoding with encryption. The use of APCO25 in and of itself is not encryption.

Police companies far and wide love this stuff because only the most expensive scanners can receive it. It also requires substantial technical prowess to figure out what's what. Someone with that kind of background isn't likely to be a threat. --Or so the theory goes.

That said, I concur with the editorial. Rodney King would never have seen justice had it not been for the very quiet support of scanner enthusiasts. Police forces far and wide have nothing to fear from a citizen listening at home.

I do. My wife does too. We like to know what's going on around us. We like to know where our tax money goes. What's wrong with that?

up to you really
but i'd be very carful about following the old wives tale about
disconnecting your coax during a storm.
this will then charge your coax with static that will discharge through your
equip when you reconnect it.
a shorted connector to a ground line would be much safer, if you wish to
disconnect

mike

You know, this is the attitude that has kept me from being a licensed ham operator. I have DX'ed for years, but find most of the operators to be smug asses who want to keep the hobby to themselves. I have no need to learn code, or more importantly, no desire. So you old fossils keep your exclusive little club and watch as it dies out with rotary telephones and vacuum tubes. Every ham I have met in person has been secretive and not at all willing to help anyone out. I sold a scope to one a few years back and in our conversation asked a few questions about becoming a ham. He was not willing to answer questions nor offer any advice, just for me to get an arrl book. He wouldn't even tell me what the repeater frequencies were for the 2 meter in our area. So, lets make the passing score 98%, 50wpm, and renew all classes every year. That ought to drive out the rest of 'em and keep you, Mr. Slow Code, as the king of all hams, even if you have no subjects to reign over.
Come to think of it, I can talk to people all over the world via internet, send packets and slow scan tv, so why worry about propagation and antennae?

Blow Code, no more damage to my brain then the lead you are breathing in
when putting together your little radios with solder.

But then again, the collector trains come pre-assembled so no glue is
involved. One nice thing, the increase in value of some of these is
incredible.

Paid $20 each for two railcars. Now I am offered $400 for each of them.
Not a bad hobby at all now is it. Don't believe me? Check the prices
for Micro-Trains Illinois state cars (first in the series).

Are trains a great hobby or what?

Man, I went to a Train Show near me recently, I was AMAZED. I didn't know so much Train Hobby stuff existed. WOW!!!!! Speaking of prices - all my train stuff went by the way side in a disaster. One "engine" I had - I seen at this show for $1400.00..... Man what a sinking feeling I had. I'm sure my dad didn't pay anywhere near "that". This was my "first" train show - as I was going to the Computer show adjoining it in the same hall. I think the train show had more customers than the Computer show. Some of the "Computer" vendors even related to such.

Lou

Out of curiosity, how old (years) is a fossil to you? Really.

Well if you are really just after instant gratification and no real
sense of accomplishment, go for it. Some like the challanges. I suppose
it is the cahllange aspect to a hobby that makes it fun. Like model
building perhaps. I haven't meet a ham who got into it because he wanted
fast and easy.

These other hams you met, did you make it clear what you expected out of
the hobby?

John

CB is dead. Turning it into CB is a meaningless statement. Your
knowledge of CB is going back way too far when it was chaos. Again, you
do not know what you are talking about as you are making references that
are very old and very outdated - just like CW and code testing.

> For them? It's not. If they can't pass the test they don't get the

Why not give a license to anyone who wants one? It's just not that big
of deal anymore. We are not dealing with lethal voltages like we did
with all the tube crap used years ago.

>
>
>> How does memorizing answers to "technical questions" make you a better ham?
>
> I said it doesn't. I said that learning makes you more knowledgeable.

That's true, learning does make you more knowledgeable. People can learn
on their own, learn what interests them, learn what they need to know.
Not what you or I THINK they need to know.

> you're one of those who needs things repeated a few times.

What if I don't care to know how it works? Most women and many men have no idea how a car engine, transmission and car computer works, but they still get a license to drive. By your standards I guess people need to know how their television, AM and FM radio, etc. works before they are allowed to purchase such an item....hmmmm?

> You never listened to QSOs on 20? Or questions asked at ham club
> meetings? Or in radio fora?

Yup, I have listened to and have many QSOs on all ham bands. And most of the crap you profess to be discussed is simply not generally discussed.
>

>
> Learning requires understanding. Memorizing isn't understanding. It
> was proved over 100 years ago that rote memorization isn't even a
> mediocre way of teaching.

Yes and no, depends what it trying to be learned. Memorization can be learning. People learn what they WANT and NEED to learn. No one ever truly learns by having something forced on them. "A man convinced against his will is still of the same opinion."

Same old tired CB argument again....yawn.....Yes, you can get on CB, Family Radio, GMRS and guess what, you can operate a radio and communicate without a test and the world does not come to an end.
>
> And leave ham radio to hams.

If you get a ham license, no matter how simple the test or no test, you are a ham and you can use the appropriate bands for your license class. Let's get more people into the service and hobby, let them explore and learn what they want - not what you want them to learn.
>
>
>
> Or, as has happened over the past few decades, they won't. But now
> that you said they will ... magic ... they will, eh?

Oh but yes they do. Some more than others. Your statement is baseless
and simply an opinion. So is mine. A gratuitous statement can be
refuted by an equally gratuitous statement.

>

> So those who seek answers become hams - those who don't become CBers.
> What's with the "everyone is equal even if the only way to achieve it
> is to dumb the entire world down" crap?

No, those with a ham license are hams. Those without a ham license are
not hams. It's just that simple. Yup, dumb it down and bring them all in.
>

> In the real world.
>

O.K. then, it's Mississippi.

>
> Demanding answers without putting in any effort seems to have
> substituted for learning.

I guess. This is the opinion of many old fart gate keeper hams, "I had
to pass a test to get a ham license and it was hard. So everyone else
needs to have to do what I did or it's dumbing down the license."

Yes it might be dumbing down the license. But because you had to do it,
doesn't mean it's right for the world today. Things are changing. Times
are changing. If you cannot deal with change, then just give up on life
because change is inevitable.

> About like everything you've said here.

See my rule of logic about gratuitous statements as noted above.

>
>

Yes, wouldn't a classless society be nice? Everyone treated equally?
Probably will never happen as it did not work for Russia and the Eastern
Bloc, but do we really need to have haves and have nots when it comes to
a hobby and a public service? I don't think so.

Throwing it off a viaduct in front of a semi truck would be one way, though,
granted, you wouldn't be able to reprogram it after such a procedure.

Why not just leave a 10K or so resistor connected full time to the antenna?

What would be the reason for this? The receiver already has an impedance to ground (2.2K in my AR8600 MkII), so it wouldn't be needed when connected, and when disconnected, an inexpensive 50-Ohm terminator with the proper connector is super easy to connect. Connecting an external resistor as you suggest would require custom wiring (easy, yes, but why do it if not necessary?).

I just received an old radio shack pro-26 scanner from a friend at work.
my boss programmed all the frequencies into the scanner. my problem is
that evey time sometime quits talking there 3 beeps lasting about 3
seconds, which means the traffic of the responding person is always
missed. there is a delay button on the scanner and i made sure i
deactivated it on all the channels but there still is a 3 second delay.

Message-ID: <2nflc2devrfeihuaab1h5ap4pkrg20fhps@4ax.com>
Source record: 7928

I received as a gift a pro-2018 scanner, purchased at Radio Shack.
Any help with the following issues would be apprec iated

-The frequency for SFO tower is 120.500. However, on that frequency,
I can only hear transmissions coming from the aircraft, not from the
control tower.

-The frequency for the local police department is 488.312. However,
after entering this on the keyboard, only 488.300 shows on the
display. The transmissions are somewhat scratchy.

Any way to improve the above.

Thanks

Don

Sounds like you are hearing EDACS trunked traffic. With a trunk
tracking scanner you will not hear those beeps. I believe [somebody
confirm or deny this] that they are a code to tell the trunking system
to release the frequency. It is possible that while you are hearing
those beeps, the responding party is already replying but on another
frequency.

Well, I have a Pro-26, and it has never done anything like this. Also
reviewing the manual just now, I see nothing about "3 beeps" in any
mode. If this is happening on any freq regardless of band or agency, I
suspect the radio is defective. If it is only coming from 1 agency's
channels, then it is a product of their system.

Get closer to the control tower, or use an outdoor antenna. Keep in
mind that the antennas the towers use are focused toward the sky, not
toward the ground like most radio services.

A friend of mine is visiting from N.O. and is now very interested in listening to N.O. Police in the city limits. I found about 40 police frequencies in vhf and uhf range listed in my Police Call CD that I got from Radio Shack about 15 yrs. ago. My question, will a 50 channel vhf-uhf scanner work or have things changed in the 15 yrs. and a special or "Digital" scanner be needed for New Orleans Police, now. Thanks for any knowledgeable answers.

It's just trying to receive EDACS trunking without a scanner that tracks it. After they unkey the repeater stays up a few secs with the beeps. With a EDACS scanner you shouldn't hear it if it's programmed correct..

Agreed. The PRO-26 is not a tracker. So the OP is not hearing a response
likely because the conversation switched to another freq altogether.

They are both the same thing. Astro is Motorola's trade name for the
P25 digital protocol.

I would think that the lower the impedance, the better, since a dead short on the antenna would be the ideal situation when disconnected. The reason it's 50 Ohms is because that's a readily available terminator. I'm using BNC connectors, so the effort is minimal. The down side of leaving it connected all the time is that, without a lightning arrestor, a strike would probably damage the receiver, so I'm going to disconnect it in any case. I don't think the 10K would protect against that.

NO-CODER LICENSE APPLICATION and EXAM

(Simplified test approved by all book and magazine publiher and
VE whorehou$e$ who $ay "We need more ham$")

Please PRINT (that means no squiggly lines)

YOUR NAME (what they call you)
_____

ADDRESS (where you live) _____

BIRTHDATE (when you were born) _____

EXAM

Instructions: Make a circle (one of these round things O) around the
letter of the best answer! This is so we know what your answer to the
question is!

1. You TALK into a microphone with your _____.

A. Hands
B. Feet
C. Toes
D. Mouth
E. Armpits

2. When you talk into a microphone, you talk into _____.

A. the front
B. the back
C. the top
D. the bottom
E. the wire

3. "HEADPHONES" are worn over the _____.

A. Knees
B. Eyes
C. Toes
D. Ears
E. Lips

4. What do you do with the AC line cord coming out of a power supply?

A. Hold it in the air to pick up signals
B. Pull on it to start the motor

C. Talk into the plug to get real "skip DX"
D. Hook it to your antenna
E. Insert the plug into a source of power

5. A ?two meter? radio is:

A. twice as strong as a one-meter radio
B. two one-meter radios in series
C. a CB with two meters on the front panel
D. a good doorstop
E. yo mama

6. A "ten-foot mast" is how long?

A. Ten feet
B. Ten pounds
C. Two meters
D. Tree-top tall
E. yo mama

7. A ?Triband antenna? is made to work on how many bands?

A. 1
B. 2
C. 3
D. 4
E. 10

8. The ?Marconi? antenna is named after:

A. Marconi
B. Mantovani
C. macaroni
D. Dean Martin
E. yo mama

9. What colors of DIODES can you buy at a Radio Shack store?

A. Red, blue and black
B. Red, yellow and green
C. Orange and brown
D. I am colorblind so this is a discriminatory question and I should automatically get my license because you have been mean to me.
E. I have no intention of ever using DIODES, so I should get my license for free.

10. What color of SLURPEE can you buy at 7-11?

A. Red, blue and black
B. Red, yellow and green
C. Orange and brown
D. I am colorblind so this is a discriminatory question and I should automatically get my license and free slurpees forever because you have been mean to me.

END OF EXAM.

YOUR SIGNATURE (slap yo tag here)

US Coast Guard is involved in the evacuation of US citizens in Lebanon
at the Port in Beirut. However, I'd like to see the source of the above
claim about CW.

Marqueer's Message From Hell
"Then he said, I pray thee therefore, father, that thou wouldest send him to my father's house: For I have five brethren; that he may testify

unto them, lest they come into this place of torment. Abraham saith unto him, They have Moses and the prophets; let them hear them. And he said, Nay, father Abraham: but if one went unto them from the dead, they will repent. And he said unto him, If they hear not Moses and the prophets, neither will they be persuaded, though one rose from the dead." Luke 16:27-31. Listen to Moses and the prophets:
"Thou shalt not lie with mankind, as with womankind: it is abomination." Leviticus 18:22.

"Hell from beneath is moved for thee to meet thee at thy coming...the worm is spread under thee, and the worms cover thee." Isaiah 14:9-11.

"The same shall drink of the wine of the wrath of God, which is poured out without mixture into the cup of his indignation; and he shall be tormented with fire and brimstone in the presence of the holy angels, and in the presence of the Lamb; And the smoke of their torment ascendeth forever and ever; and they have no rest day or night." Revelation 14:10,11.

I dont think that ProVoice is technically "encryption". I think it is a proprietary method of voice encoding/digitization. I think this has been discussed at www.radioreference.com - check the M/A-Comm forum.

None of the above -- It will radiate on all bands, just better on 3 of them,
so it depends on your defination of "works".

....and that bums me out cuz my local PD has gone digital and to upgrade I have to buy a radio that has inferior performance.

I hope whatever comes out next from GRE/Uniden will be comparable to the 780 with digital reception.

Radios aren't jealous like women . . . it's perfectly OK to have more than one. ;)

Hell, I still use my Pro-2006 for mil air because it is even better than the 780 I used to have, as far as sensitivity is concerned.

I can't speak for the relatively new 996, but the Pro-2096 is a fine scanner. With all the crap they have to cram into one unit these days, I don't think it's reasonable to expect a perfect all-in-one analogue and digital solution . . . at an affordable price at least.

I am interested in purchasing a used 800mhz scanner that has trunking capabilities. I would prefer handheld but that is not a requirement. Please let me know if anyone has one they are willing to sell. You can reply or email at bhm76@qx.net.

Well my old trusty BC9000XLT is still by far my favorite scanner,
conventional, analog and all.
Has better rx and audio than the 780, however the 780 is one of the best
trunk trackers I've ever owned, and that's why I still have it. Although
after the rebanding it will be a conventional scanner again.
I have a Pro96, and other APCO25, I don't like it at all. For the money its
missing a lot of options that my old BC9000 already has, and its 10yrs old.

eBay is usually covered up with them. There are 10 or so Radio Shack
PRO-95s out there right now. That's a great bang-for-the-buck radio
meeting your requirements.

Nothing, not even a dead short with #4 wire to ground, will protect
against a direct lightning strike - you're talking millions of amps.
And a 10k will protect against static buildup.

A 50 ohm termination is used to terminate unused outputs on a
splitter, because the only way the splitter will work properly is to
have a 50 ohm termination on each output - either cable to a receiver
or a non-inductive resistor.

All true, but my point is that the receiver already has a 2.2K resistor to ground at the antenna input, so adding a 10K in parallel is completely unnecessary. And using a 50 Ohm terminator on a disconnected antenna downlead is no worse than using a 10K resistor. In either case, no additonal wiring is needed, and the protection from static build-up is there, which was the topic of the OP's question, I believe.

It still isn't clear why I should go to the trouble of wiring up a 10K resistor on the antenna, and why using a 50-Ohm terminator on a disconnected downlead isn't just as good (possibly better).

We do agree that, without a lightning arrestor, it's better to disconnect the downlead during a nearby thunderstorm than to leave it connected with just a 10K resistor, don't we? The method for draining static build-up may vary, but both methods are valid.

- Doug

Well ...

If it's just hanging there and a few tens of thousands of volts come
down the cable, you may lose a few things - radios, furniture, the
house ...

I disconnect my antennas during thunderstorms and connect them to a
grounded block mounted directly on a good ground rod (right outside
the shack window). I've seen what a direct strike can do more than
once. It's not something you can protect against, but I'd rather lose
my antennas and cables than my house.

OK, fair enough.

The Amateur Radio Service of the 21st century will be all CW without a
Morse Code Exam.

We'll go out of existance EXACTLY like we came in.

I'm sure that will make the Morseodists happy.

There is no pass/fail practical for SSB, FM, AM, FSTV, SSTV, RTTY, FAX,
Packet, PSK, etc, etc, etc.

> answers. It used to require that you draw (was it 3?) schematics.

You tell me? Was it 2 or was it 3? Is this your lucky day?

> From scratch. Let's see how many people could do that today. A
> Colpitts oscillator, a Hartley oscillator and some other circuit that
> I've forgotten at the moment.

You should self-modify your license and cease amateur operation until
you remember.

The amateur is self-policing, and you no longer meet your own standard.

> They're still as relevant today as they
> were 50 years ago.

Other things are relevant today that weren't even known 50 years ago.

> annoyance up front. How does CB benefit the country?

Sounds like you need to look for a different hobby if you have such
disdain for your fellow amateurs. Best of Luck.

I used radios in the military. I never used a CW key in the military.
I never jammed another operator, although Brandywine asked me to reduce
power once.

> >> >how patriotic is it to keep a staion forom aquiing the skill to be

> above. How does one acquire skill by playing radio?

We self-train. It is a continuous process of improvements. You
mistakenly believe that at the conclusion of The Exam, the "operator"
is 100%.

Never was, Never will be, and neither were you weren't.

I'm beginning to think that you're from the school of "The Older I Get,
The Better I Was!"

> >> Or any skill, other than
> >> getting what you want? You don't acquire skill by doing something
> >> that requires no skill.

Nor do you.

> But that's what Mark and his ilk want - we'll have "skilled operators"
> if we allow people to buy radios and put them on the air with no skill
> or knowledge. By osmosis? Or by magic?

I've listened to emergency responders on a scanner before. They don't use Morse Code, they don't use CW. They use FM/Voice. Somehow they are effective at it, not having taken a Morse Code test. How can this be?

Tell you what. The next time your YL dials 911 for you, she has to communicate with the 911 Operator in Morse Code. She can just sound it out with her mouth, no keyer, sounder, clacker or anything else required.

When the Operator tells her to speak normally, your YL is allowed to say once, and only once, using her normal voice, "Real communications takes place with Morse Code" and then revert back to sounding out her message with Morse Code dits and dahs.

Agreed?

On your block of granite, she will say, "Here Lays Al Klein, Who had no use for Voice Modes. May He Rest In Peace"

> >> And you, particularly, don't acquire
> >> knowledge by demanding something for nothing.

>
> Evidently not, or I'd be the only one in the world advocating that a
> test should actually test for something. There are actually millions
> of us who don't think lack of instant gratification is the worst thing
> in the world.

Dial 911 and tell the operator that you don't need instant gratification, take your time.

> What next? DXCC awards for those who *want* to work 100 countries?

You seem to be confused. DXCC is an award offered by the ARRL, not the FCC. It has nothing to do with licensing.

You ask "What next?" How about a test for everyone else except you, where you get to try to recall what was on your test, but can't.

>> correct answers denies all privs - HF, VHF, UHF ...

>There is no pass/fail practical for SSB, FM, AM, FSTV, SSTV, RTTY, FAX,
>Packet, PSK, etc, etc, etc.

There's no test at all, so those claiming that the reason they want a
test for CW dropped because it's not "modern" have no argument - they
want no test for FSTV, SSTV, RTTY (which is also pretty old hat),
packet, PSK, etc. They want no test at all, unless they can memorize
a few answers to "pass" it.

>> >> >How progressive is it?

>> >guys want to "beef up" the written exams?

>> We don't.

>That is not true.

Sure it is. "Beefing up" the written exam is a counter to "drop CW
because it's old fashioned". If you want modern you want the testing
to be turned from CW to modern modes. Those who want CW dropped just
want what they can't memorize dropped so they can get a ticket without
really being tested on anything. Actually knowing anything is so old
fashioned, isn't it?

>> We want to get back the level it used to be before it was
>> dumbed down to the point that you could almost pass it if you never
>> heard of the FCC, ham radio or electronics.

>You're referring to the Conditional license, right?

No, I'm not addressing *where* the test is held at all - I'm addressing *whether* there's any real test, which there isn't, except for CW right now. Spitting out something you memorized is only a test of memory.

>> Just by guessing at the
>> answers. It used to require that you draw (was it 3?) schematics.

>You tell me? Was it 2 or was it 3?

I don't remember after almost 50 years - but I could still draw them today, and it's not a test of remembering what's on the test, it's a test of knowing what's in a radio.

>> From scratch. Let's see how many people could do that today. A
>> Colpitts oscillator, a Hartley oscillator and some other circuit that
>> I've forgotten at the moment.

>You should self-modify your license and cease amateur operation until

But an award for wanting has to do with "I want it so it's my right to
have it", which is what I'm talking about. No one has any "right" to
get on the air.

Probably, Cecil, since it would then make it difficult to pass the
test.

"I"

There. You just got ONE "character" of several
electronics-related formulas.

Now do something with it without knowing the rest of the
"characters" that go with it.

You missed the point. The Morse code skill exam requires
memorizing the characters. Memorizing is being condemned
as an evil act. Since memorizing is evil, the Morse code
skill exam should be the first thing to be eliminated.

In some cases, it "could" be said that hairs are being split. To have "knowledge" of the code - could mean basically - you know it exists and why it is used. To "know" the Morse Code, usually refers to KNOWING the characters sufficiently to use them at whatever speed it is you can. On the other hand, someone who isn't involved could say - that a Ham operator is "knowledgable" in the code. Heck, to someone not IN Ham radio - they could easily assume a NO CODE tech - KNOWS code.

Memory plays a big part be it with learning CODE OR Electronics formulas. MEMORY plays a huge part in "remembering" how to solder correctly and so on. You have to MEMORIZE these things just like code characters - to be proficient. Just like MEMORIZING traffic signs and so on - to get your license to drive.
I think there is too big a deal being made here.

It comes down to - if you want to do ANYTHING - be it do morse code, drive, parachuting, whatever - you have to MEMORIZE SOMETHING - to make it happen.

Just to clarify my point - many "assume" a Ham Operator - regardless the
license - KNOWS code. So, if a "No Code" tech simply says "I"M A HAM
OPERATOR" to someone not knowing the license class structure, the
"assumption is made. AND unless that NC tech clarifies it, the unsuspecting
person will go on in ignorance "assuming" ALL hams "know" code. Morse Code
(per my recollection) has always been and most likely - even if only in
history books - always will be known and associated with HAM RADIO.

My mother told me stories of learning morse code this way when she worked for the railroad. She then taught me morse code this way. For twenty yeasrs after that I always wanted to be a ham and finally got m ylicense at about age 35. I was fairly active for about 8 years and pretty much lost interest when my daughter was born. In the last couple of years I have been sporatially interested again but their alaways seems to be little projects and interest that pull me away from it.

When I first went to work at tmy present job almost every tech that worked there was a ham. Just about all of them retired within a few years and nnd only a couple are still active on the ham bands. They pretty much all say that they just dont have time for it anymore. This is where ham radio is going, It is losing out to living.

I havent gotten totally out of it yet and am occasionally involed. Usually working on an antenna project thinking I will become active again. I have been asked to assist some girl scouts in getting badges but I am having a lot of trouble finding scouts that are interested although the requirements are very minimal

Having to learn CW isn't preventing you from modernizing, You're just
lazy. Now go play with your model cho-cho trains.

Yes. That's understandable. Hams these days don't want to act like hams,
they like to be appliance operators. So kids don't see that CW is
important and fun. All they see is hams gabbing on a microphone like any
CB'er can do.

Hams would still be able to build their own amps if dumbed down licensing
hadn't turned them all into appliance operators.

How the heck can someone know that the ohm is the unit
of resistance without memorizing it? How can you possibly
develop Ohm's family name from first principles? I
memorized the ARRL License Manual in the early 1950's
in order to obtain my first two amateur radio licenses.
Memorizing license manuals is absolutely nothing new.

I "may" be going out on a limb here but I THINK I may have figured out what Al Klein is speaking of - possibly misrepresenting his line of thinking in the scope of things - thus causing the confusion.

I THINK his idea of memorization or what he is referring to is as such - lets say you have someone who wants to pass their ham exam. They buy a manual and instead of reading the damned thing to LEARN the ins and outs of ham radio, applicable theory, rules, regulations and so on - they simply try to memorize each answer which is shown as the right answer - merely by A, B, C or D. Some clown I knew, tried this - he didn't take into account that the tests were not always in that order - when it came to the answers.

Am I correct Mr. Klein?

2844. BPL as posted about a day or so ago

Newsgroup: rec.radio.scanner
Date: 2006-08-04 19:12:11 UTC
From: clfe <postmasternospam@clfurentnospam.com>
Message-ID: <44d39bfe$0$2936$ecde5a14@news.coretel.net>
Source record: 7724

A day or so ago - someone posted some information presuming that "experts" claim that CB/HAM will interfere with BPL. "I" stated in reply - I had heard quite the opposite - that CB/Ham AND 2 way radio services used by Public Safety and so on were "suggested" to be the ones to be interfered with.

HERE is an excerpt released just today - read it. The FCC is taking action to make sure that BPL DOES NOT INTERFERE WITH EXISTING SERVICES.
Now, maybe the FCC isn't the greatest thing next to God or plug in your own highly acclaimed person/item/agency of choice - but here in the US - they DO set the laws and standards for RF transmissions.

FCC ADOPTS MEMORANDUM OPINION AND ORDER ON BROADBAND OVER POWER LINES TO PROMOTE BROADBAND SERVICE TO ALL AMERICANS. The Commission affirmed its rules for Access Broadband Over Power Lines (Access BPL) Systems while maintaining safeguards against harmful interference to existing radio services. News Release. (Dkt No 03-104 ,

That's exactly what I mean. You're misrepresenting "memorizing that
the answer to the question about the resistor with the orange band is
10,000 ohms" is the same as "memorizing the color code".

To paraphrase Maxwell Smart, you're thiiiiis close. Substitute "the
correct answer to each question" for "A, B ..." and you've got it.
Some things have to be memorized - you can't, as Cecil tells us,
derive laws from first principles - but there's a difference between
"the answer to the question about the oscillator is the .001ufd
capacitor" and learning the basics of a Twin-T circuit.

1) Any "experts" stating that are at the same level as the "experts"
who claim that the reason coiling coax reduces signal is because the
electrons jump from turn to turn and get confused. (I actually heard
that once from a self-proclaimed expert.)

2) If it happens (that a licensed radio transmitter, being operated
properly interferes with BPL) that's just too bad. The radio service
is protected, BPL is not.

I'm alomost 69 years old and have forgotten most of what I learned in college.
But I still remember what I learned in High School ... how to copy Morse code.

I still remember what I learned in grade school ... how to ride a two wheel
bicycle.

Now, if I could only remember that name of the woman I've live with for the past
43 years ....

Does anyone have any tips/directions on how to identify, and change the C-98 Capacitor in the Bearcat 300? Mine has all the classic symptoms (low display and can't program a frequency).

I have little experience repairing radios, and it's not clear where to find C-98 in the radio, to replace it. Any suggestions??

Thanks,
Denny

A cheap tracking device can be purchased through one of the following pages.
http://tech-software.net/index.php?module=pagemaster&PAGE_user_op=view_page&PAGE_id=5&MMN_position=7:7
http://www.silcom.com/~pelican2/PicoDopp/PICODOPP.htm
I really don't think tracking devices have to be expensive but if you don't like paying for a good one, then I can provide a very simple 555ic timer circuit you can use that will cost about $10 to make.
Here is the circuit of a very simple but workable tracking device that I once used to track a signal to tandy's store in the toowong towers in Brisbane. Once you learn how to use it, you can track to a square metre. A hand held radio is the best choice of radio to use with the tracker. This shop blocked ch 7 for 3 days until I had some free time to go and see where it was coming from. The same shop did it again some time later and the culprit lost his job at that location thanks to a night time worker that was on the ball. The signal was a radio on the shelf connected to power with a small antenna and a clip lead over the mic insert to hold it on tx.

If one wishes to operate legally on 11 meters do not use CW or tone CW.
The only legal modes of communicating there is AM or SSB voice. Tone
maybe used as an alerting mechanism but not for other methods of
communication.

Even though licenses are not required and most (not all) persons don't
follow the regs there, if you are caught violating the regs there you
can be refused an Amateur License. It can and does happen from time to time.

It is Mon, 1:25pm EDT (1725z).
Tinker AFB 960ACS E-3 AWACS "Goliath Alpha" is up with Miami Ctr on
323.1. He has just gotten an altitude block for W-174 FL500 and below.
Goliath Alpha also contacted Homestead ARB's "Mr Mako" on 303.15 to
inquire about the status of "MAKO 11" flight and "SHARK 21" flight
(F-16s); both flights are still on the ground, but departing soon.
Then Goliath Alpha did a modes and codes check with "OakySam"
(NORAD-Tyndall AFB) on 282.6.
Just waiting for the action to begin now.

cb will interfere with it, as just about any other wideband noise that generates harmonics that are louder than the next bpl attached to the next pole down or up the line. That is no trick, since they operate in the 100 mw range, and they probably have a cheaper receiver in them than a cheap transistor radio does
Every time somebody starts welding in your neighborhood, or uses their electric razor, or keys up their 100 watt cb linear overmodulated "splatterbox", your bpl gonna go bye - bye. You will get more disconnections than a dial-up user.
bpl (at least the kinds that have survived the initial testing phase) is implemented by attaching a repeater to each pole, and this "chains" through all the other repeaters, up and down the entire line, to get to and from the isp. Does this give you an idea of the kind of susceptibility bpl will have to interference from just about any source ? A break in the chain is a break in the chain.....

I understand what "you're" saying - but the issue has been - from all I've
read - not the inteference to the BPL - but rather FROM the BPL. And
apparently the FCC is leaning in that direction as well with R/Rs to protect
"existing radio services". Thus my excerpt showing same.

This is true! As the man said, tho most don't follow them - they DO exist.
They WILL be enforced - if so desired. Actually, an infraction of any radio
rule can deem you ineligible for not only an Amateur Licence but also any
other license from the FCC - even GROL. IF you hold a GROL and do something
stupid with it, it can cause your "amateur" license to be stripped.
Ignorance is no excuse. When you sign the forms - and your license(s) - you
agree to abide by the R/Rs.

You're correct - and just a few days ago - there was a case of a "licensed" individual who "allegedly" molested children and was convicted - the FCC was debating renewing his license. So, it appears they take a dim view on "criminals" being "license" holders. I guess they feel if you can't obey the law of the land, why would you obey their rules and regulations! I wonder if they take into account any one who's been convicted and had "successful" rehab? That would be interesting to know.

I once seen a copy of the "code" used by other countries. There were
"some" - if not many differences. I also seen a copy of "supposedly" the old
west code - used .... Man, what a difference - IF ALL WERE TRUE - that
is........ I'm only reporting what I seen, can't say for sure if true or
not. It was interesting to say the least.

Maybe - and I"m going on a limb here to guess - the "differences" in the
other countries code - was short hand much like our Q signals.

Just a wild guess - low display would seem to be a power supply
problem, so I'd look in that area. If it's an electrolytic (it
probably is), the value would be marked in English.

I hope the rest of you will consider doing the same.

Let's stop teasing Mark, and help me with the five steps below.
Thanks. 73.

SC

Step 1: No more automatic renewals. Individuals must retest and
pass all elements required for their license class.

Step 2: The passing score for written exams needs to be raised to 85%.

Step 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

Step 4: Make the no-code license one year non-renewable.

Step 5: Cancel your league membership until they decide to work
to improve things.

Morse code as used by Western Union (when they did code) is different
from International Morse code as used by radio operators. Not very
different but different.

That's American Morse, as opposed to International Morse, which is
used on the air. American Morse is composed of dots, dashes and
spaces. (Spaces are parts of the letters, not just the spaces between
them.) International Morse uses just dots and dashes - the spaces are
just spaces.

no I don't buy that either

while I do not propose to end written testing I do wonder if the ARS
might not be better off with a license that (like GRMS) that one BOUGHT
from the FCC with the money rasied thereby used solely to conduct
enforement action on the ARS bands

and Indeed an almost no test novice liiting the licensee to unmodfied
Hts and a staion set up by a full status with no or a very minimal test
might well be a good way to go

preveldges close to the old novice (but with 2m instead or adtional to
222Mhz)
and a test for full preveldegs afer that

I'm not a no code fan either but....

In case you havent listened to the bands and noticed most hams are now missing....Ham radio is already dying without handing out free tickets.

The number of people becoming new hams is dropping monthly!

Soon the amount of hams dying will be greater than new tickets. Code or not....Its days are numbered.

And that would prove what?

Slow, you should be old enough to know that this is NOT a perfect world and that the ARRL is not a perfect organization.

However, it IS the -only- game in town. If your "boycott" works, people quit and the ARRL loses revenue, then they will be able to accomplish even less than you think they are accomplishing now.

Sorry, but your plan seems a little half-baked. Come back when you get over being slow.

Of course not. And the wolf can't see what's wrong with his guarding
the hen house.

>while I do not propose to end written testing

Sure you do - unless it's a test you can pass if you have to.

> I do wonder if the ARS
>might not be better off with a license that (like GRMS) that one BOUGHT
>from the FCC with the money rasied thereby used solely to conduct

It wouldn't. Is GMRS "better off"? What would the difference be? The
frequency? Is CB "better off"?

There are various types of radio usage - CB for communications - which
soon stopped working. GMRS for communications. Ham radio for
hobbyists. We don't need to turn ham frequencies into a preserve used
for communications - we have 2 perfectly useful - and *totally*
test-free - bands for that now.

>preveldges close to the old novice (but with 2m instead or adtional to
>222Mhz)

The old novice HAD 2 meters. Just no VFO (and, IIRC, only CW and AM).

Not being from England, I would say start here:

http://www.rsgb.org.uk/

I assume it is the equal to the ARRL.org in the United states, sort of a
national club for the ham operators. YOu should be able to find out what
you need to do to get a license and learn about ham radio through them.

Not true. Hams care much more about saving lives than operating appliances.
I'm betting a great number of them have their CPR cards,
ready for action. Self-cleaning ovens run a sad second place to standing
tall at the 911 center.

On your other point..
Most hams are men and they generally don't know how to operate any appliance
except the refrigerator door,
and maybe the microwave oven. A few are versed in toaster operation, I hear.

However; they will indeed spend hours installing flashy lights and
noisemakers on their cars, as well as
spend hours 'standing by' and preparing for the life-saving moment. They'll
spend grocery money to purchase a
plethora of other "necessary" equipment and "uniforms/ID/look-at-me" items.
Be it weather watching, crowd control, parade control, or just control in
general, hams are standing by to manage the world, after the "big one"....
Hams just like you, Dirk. And for that, I thank you.

I can only pray for peace on these hams as they spend their last days
brushing the fallen hair
from their rigs. Saving countless lives in the aftermath, diligently
tapping away; giving
needed instruction to all the elderly survivors crowded around their
homemade QRP
battery operated rigs..... Oh, and lest we not forget the generator owners
crowded around their swans, drakes and 101e's... burning precious fuel to
strain an ear
for the faint but all-knowing dit-dah that will be their salvation.
I'd bet with a 100w rig pushing a 600-1Kw amp [and a break in the fallout],
they could work weak signal maybe 10-20 miles
through the new noise floor.

As for me, I'll be listening too,
voice, morse and digital.
Coz by that time, the only appliance I'll be operating is that new
one-button rig from GLOCK.
....and I love ham.

LOL...
btw, trolls suck.

I'm in the process of building a database on airshow frequencies. Some sites like MONITORING TIMES can be helpful but all to often they overlook a key fact: the participants were using the same set of frequencies as all the others at that particular show. Namely AIRBOSS, DISCRETE, etc.

Wondering if someone could point me to sites that have identified frequencies used specifically by individual acts?

Wow ... I have a no-gap MK3. I have most of the slot cards and all the accessories that came with it, including the factory packaging. I never even took the protective film off the LCD and use the rig very little, so you can't tell it from brand new.

I keep it in a custom-fit leather case and a camera bag, and paid $620 for it in 8/04. I tried to sell the whole kit for half the purchase price of the radio alone, but you'll find there isn't much of a market for these things any more.

Oh well, at least I'm stuck with the best (and the last scanner) ever produced ... meaning scanning isn't what it used to be, but since most consumers have no idea the concept is dead, you may still have a chance to get what you're asking. Good Luck!

Depending on the definition of "required", he may have - that's the
point. Knowledge is no longer "required", it seems to be optional.
The other option is memorizing the answers.

Since you became aware of it. It used to be required. You can't
memorize the "answer" to "draw the schematic of a Colpitts
oscillator".

>> The other option is memorizing the answers.

>as has been all along

As long as you've been aware of it. The world didn't begin the moment
you first opened your baby browns.

sure I can
at at least i assume the colpitts is no more complex than most of the
others

no understanding of the curcut is required to render a picture from
memory
indeed the only I or anyone else is going to know that ciruct x is a
colpitts rather than Holtzman or a Fu Manch is by memory

You couldn't be more wrong. If there were practical exams for SSB, FM,
AM, FSTV, SSTV, RTTY (which is pretty darned old), packet, PSK, etc,
then it would be CRYSTAL clear that a Morse Code exam is valid.

However, there are no such practical exams for the other modes. So
there need be no exam for Morse Code, either.

> >> >How progressive is it?

That is not true. You wish to change the written exams, not add
practical exams for SSB, FM, AM, FSTV, SSTV, RTTY (which is pretty
darned old), packet, PSK, etc.

> Those who want CW dropped just
> want what they can't memorize dropped so they can get a ticket without

What if you forgot your band edges?

> >The amateur is self-policing, and you no longer meet your own standard.
>
> Sure I do. The test wasn't to remember what circuits to draw, it was
> to draw them. And I can draw them any time.

Then do so. Quit complaining to me that you can't remember what it was
that you were supposed to draw.

> >> They're still as relevant today as they were 50 years ago.
>
> >Other things are relevant today that weren't even known 50 years ago.
>
> So let's have them on the test.

But if a practical exam is necessary for Morse Code, why isn't it
necessary for other modes? If all radio is merely plug and play, why
do the services still have radio schools (that aren't teaching Morse
Code)?

> Oops, that's right - no more relevant testing, isn't that what people
> are asking for? Just give me the answers so I can memorize them and
> pick them out on the test.

Who said that? We absolutely NEED relevant exams. That is my whole
argument!

Not in Morse Code. If you must retain a Morse Code Exam, then you must
also administer practical exams for SSB, FM, AM, FSTV, SSTV, RTTY
(which is pretty darned old), packet, PSK, etc.

> >> So you'd get a license not knowing CW, build a radio (you couldn't buy

Correct. And no one has a right to force their favorite mode on
everyone else. Your days of doing so are numbered.

Heaven forbid that someone assumes that a lowly, unwashed Technician
know the CODE.

> lou

Many "assume" that an Old Timer knows more than they actually know. Most Old Timers are guilty of this kind of thinking. Furthermore, many "assume" that newcomers to the hobby know little or nothing, and have no desire to learn. Most Old Timers are guilty of this klind of thinking.

But drawing it correctly, including parts values, requires
understanding. Or are you claiming that you can memorize a few dozen
schematics and draw any 3 upon request?

>indeed the only I or anyone else is going to know that ciruct x is a
>colpitts rather than Holtzman or a Fu Manch is by memory

You just don't know the difference between understanding something and
memorizing answers.

Add SSB, FM, etc., to the nothing there is today.

>So all ham radio is is Morse Code on HF? Or is it more than that?

It's a lot more. The question isn't what ham radio is, it's whether
one should be required to pass a realistic test to get a license.

>> No, I'm not addressing *where* the test is held at all - I'm
>> addressing *whether* there's any real test, which there isn't, except
>> for CW right now. Spitting out something you memorized is only a test
>> of memory.

>Sounds like the Conditional License to me.

The Conditional was whatever class was being tested for, but not at an
FCC office. It had nothing to do with the class, only with the
location.

>> I don't remember after almost 50 years - but I could still draw them
>> today, and it's not a test of remembering what's on the test, it's a
>> test of knowing what's in a radio.

>Then advocate passing the current exam at every license renewal.

What current exam? Memorizing answers and writing them down isn't a
test.

> You'd probably be weeded out pretty quickly.

I doubt it - if I couldn't pass an Extra theory exam - a real one, not
the nonsense that passes for one these days - I'd lose my job in a
second.

>> >> From scratch. Let's see how many people could do that today. A
>> >> Colpitts oscillator, a Hartley oscillator and some other circuit that
>> >> I've forgotten at the moment.

>> >You should self-modify your license and cease amateur operation until
>> >you remember.

>> Why? Testing isn't about memory, it's about knowledge.

>What if you forgot your band edges?

What if you addressed what I said when you answer me? Your dishonest
tactics are transparent.

>> >The amateur is self-policing, and you no longer meet your own standard.

>> Sure I do. The test wasn't to remember what circuits to draw, it was
>> to draw them. And I can draw them any time.

>Then do so. Quit complaining to me that you can't remember what it was
>that you were supposed to draw.

Quit putting words in my mouth. I wasn't complaining to anyone, and
we weren't discussing remembering 50 year old tests.

>> >> They're still as relevant today as they were 50 years ago.

>> >Other things are relevant today that weren't even known 50 years ago.

>> So let's have them on the test.

>But if a practical exam is necessary for Morse Code, why isn't it
>necessary for other modes?

Maybe we should have one - show the ability to put a clean PSK signal
on the air. Show the ability to interpret a waterfall display. Show
the ability to tell the difference between various digital modes. The
bands would be pretty QRM-free.

> If all radio is merely plug and play, why do the services still have radio schools

That's my point, not yours. Or don't you understand what you just
said?

>> Oops, that's right - no more relevant testing, isn't that what people
>> are asking for? Just give me the answers so I can memorize them and
>> pick them out on the test.

>Who said that? We absolutely NEED relevant exams. That is my whole
>argument!

So you're in favor of exams that test knowledge of theory? "Draw the
schematic of ..."? "Explain why long path 2400 bps is impossible on
14 MHz"? That kind of relevance?

Or the "pick the answer with the resistor like we showed you in the
example" kind of relevance?

>> >> But you had to actually *know* a little theory to use one legally.

>> >No you didn't.

>> Yes, you did - you had to pass a test to show that you did.

>There has never been a practical test to show that you could operate a
>radio. Ever.

Do you understand what the word "theory" means?

>> All you
>> have to do now is memorize a few answers.

>That's all you had to do then.

How do you draw a schematic and explain the functions of parts by
memorizing answers? You can't explain phase shift by memorizing "10k"
or "coil".

>> >I used radios in the military. I never used a CW key in the military.
>> >I never jammed another operator, although Brandywine asked me to reduce
>> >power once.

>> But you had to learn how to use the radios.

>I did?

They just gave you a radio and said "use it"?

>> Hams today don't - they
>> memorize a few answers, buy equipment and get on the air - with no
>> understanding of what they're doing, and no desire to learn.

>Then it hasn't changed much since you were first licensed.

When I was licensed you had to show an understanding of theory, by
answering questions that were more than just multiple choice from a
published answer pool.

>> You may, but I can see from many of the comments that have been posted
>> here that a lot of people don't. They don't want to learn, they want
>> to get on the air. Period.

>W3RV didn't wait to get a ham license before operating! He just wanted
>to get on the air. Period.

Point?

>> And you mistakenly believe that most hams today want to learn how to
>> operate properly. Listen to 75 some evenings.

>Lots of OFs on there who should know better. That's why I hold the
>opinions that I hold. Your generation doesn't have a lock on decency,
>respect, or apatite for knowledge. Far from it.

Very few of "my" generation there.

>> >I've listened to emergency responders on a scanner before. They don't
>> >use Morse Code, they don't use CW. They use FM/Voice. Somehow they
>> >are effective at it, not having taken a Morse Code test. How can this
>> >be?

>> They were trained.

>Not in Morse Code.

You must be sitting on oil. Can't you stick to a topic long enough to
be coherent? You were discussing how someone can be efficient at
voice commo, not in Morse.

> If you must retain a Morse Code Exam, then you must
>also administer practical exams for SSB, FM, AM, FSTV, SSTV, RTTY
>(which is pretty darned old), packet, PSK, etc.

I have no problem with that.

>> >> So you'd get a license not knowing CW, build a radio (you couldn't buy
>> >> one then) and ... what? Sit and look at it. Some things are just too
>> >> obvious to need mentioning.

>> >Please diagram that radio from "Scratch."

>> Any time. Filter or phasing? BFO receive or quadrature detection?
>> I've designed them, built them and used them, and still could.

>What is/was your profession?

Trained as an EE. Spent years designing RF circuitry, then went into
digital design. "Is", not yet "was" - I'm still alive.

>> >> What next? DXCC awards for those who *want* to work 100 countries?

>> >You seem to be confused. DXCC is an award offered by the ARRL, not the
>> >FCC. It has nothing to do with licensing.

>> But an award for wanting has to do with "I want it so it's my right to
>> have it", which is what I'm talking about. No one has any "right" to
>> get on the air.

>Correct. And no one has a right to force their favorite mode on
>everyone else.

I'm advocating real testing for whatever mode. Right now the only
test is "do you have the fee, can you get to the testing place, and
have you memorized enough answers to pass". Let's have a test that
shows whether the testee knows anything. CW, APRS, AX25, PSK - all of
it. Or separate the licenses. You want to operate FM, you take a
test on FM and, if you pass, you get an FM license. Want to operate
SSB, you take a different test.

Not "want to get on the air? memorize some answers and pay your fee".

>no desire to learn.

Most of those are the assumptions of newcomers about the assumptions
of old timers. Most old timers don't make that assumption. We've
been around long enough to have seen different.

Hello Brian,

You are engaging in old-time necro-equine flagellation here with
this "Al Klein." I suspect he will not buy rationality and come
back with more of the ARRL-taught-and-sponsored emotionalism
about radiotelegraphy.

The fact that the World Radio Conference of 2003 amened the amateur Radio Regulations seems to be lost to the brainwashed. Prior to July 2003 *all* nations *were*required* to administer International Morse Code proficiency tests to amateur radio license applicants. *All* No exceptions. After July 2003 *all*administrations* were free to test for morse or junk the test.

In mid-2003 the ONLY non-amateur radio service in the world that even bothered with manual radiotelegraphy were some ocean-going vessels who had not bothered to update to Data and SSB like the bigger ocean shipping concerns had already done for years.

>> Sure it is. "Beefing up" the written exam is a counter to "drop CW
>> because it's old fashioned". If you want modern you want the testing
>> to be turned from CW to modern modes.
>
>That is not true. You wish to change the written exams, not add
>practical exams for SSB, FM, AM, FSTV, SSTV, RTTY (which is pretty
>darned old), packet, PSK, etc.

Klein seems to be thinking the AMATEUR radio test "has" to be as "tough" as the commercial licenses. AMATEUR radio is about hobby pursuits, a pastime done for personal pleasure. It is NOT some professional activity (except in the minds of a few dwelling in fantasyland).

I've had a Commercial ticket since March, 1956, passing it at an FCC Field Office on first go. It didn't hurt that I'd already had three full years of big-station Army communications for prior experience.

The United States Army did NOT require me to "know CW" in order to keep 30 to 40 HF transmitters on the air or keep 9 24-channel microwave radio relay terminals operation 24/7. At the same time I had to be proficient in "destroying the enemy." That was in 1953 to 1956.

>> Those who want CW dropped just
>> want what they can't memorize dropped so they can get a ticket without
>> really being tested on anything.
>
>So all ham radio is is Morse Code on HF? Or is it more than that?

It's "Working DX on HF with CW." :-)

ARRL has worked the CW thing to death ever since Hiram Percy went beyond the ionosphere over 70 years ago. Newington got brainwashed by "T. O. M." long ago and never went into detox.

>> No, I'm not addressing *where* the test is held at all - I'm
>> addressing *whether* there's any real test, which there isn't, except
>> for CW right now. Spitting out something you memorized is only a test
>> of memory.

>
>Sounds like the Conditional License to me.

Klein really seems to want a Professional license exam for
AMATEUR activities!

Unless there's been a change in the Communications Act of 1934
and the Telecommunications Act of 1996 as of this Wednesday
morning, the FCC was NEVER EVER chartered to be an academic
institution.

Radio amateurs are AMATEURS by definition.

>> >> Just by guessing at the
>> >> answers. It used to require that you draw (was it 3?) schematics.
>
>> >You tell me? Was it 2 or was it 3?
>

>> test of knowing what's in a radio.
>
>Then advocate passing the current exam at every license renewal. You'd
>probably be weeded out pretty quickly.

I can still remember my First 'Phone test. Took two hours. Four
parts to get a First. I recall four schematics...ALL on vacuum
tube circuitry. [this was in 1956 and there were NO RF power
transistors available anywhere]

Anyone who hasn't kept up with the state of electronics would be
totally LOST inside a modern HF transceiver...probably dumbfounded
by any HT using SMDs. :-)

>> >> From scratch. Let's see how many people could do that today. A
>> >> Colpitts oscillator, a Hartley oscillator and some other circuit that
>> >> I've forgotten at the moment.
>
>> >You should self-modify your license and cease amateur operation until

>
>> Why? Testing isn't about memory, it's about knowledge.
>
>What if you forgot your band edges?

[change band surgeons? :-)]

No problem for me on Klein's "challenge." I can name four more
basic oscillator circuits, draw them out, simulate their operation
in SPICE after calculating the values with a pocket calculator,
build the little suckers, adjust them, measure their characteristics
and even design-build impedance-interface networks for outputs.
Of course, the challenger has to PAY me for that...I AM a pro

and other folks have paid me for such services for a half century.

Ackshully, about half the commercial ticket questions were on
Rules and Regulations. The theory part was cursory to the subject
and not near enough complete to "qualify" for expertness in radio
or associated electronics. As I've seen since, they still ran
heavy for Rules and Regs for the next four decades. It should.
Not even the commercial ticket is any kind of "diploma" of
knowledge.

>> >The amateur is self-policing, and you no longer meet your own standard.
>
>> Sure I do. The test wasn't to remember what circuits to draw, it was
>> to draw them. And I can draw them any time.
>
>Then do so. Quit complaining to me that you can't remember what it was
>that you were supposed to draw.

Not many tube Hartley oscillators used nowadays. :-)

I see more Yamahas than Hartleys... :-)

>But if a practical exam is necessary for Morse Code, why isn't it
>necessary for other modes? If all radio is merely plug and play, why
>do the services still have radio schools (that aren't teaching Morse
>Code)?

There is NO practical reason for a manual radiotelegraphy test
today. There is only the EMOTIONAL demand of some old-timers
for all to do as they had to do.

>There has never been a practical test to show that you could operate a
>radio. Ever.

Correct for the United States of America.

[waiting for someone to trot out the Russian amateur test...I'll
give them a year's subscription to The Daily Worker...:-)]

>> Hams today don't - they

>respect, or apatite for knowledge. Far from it.

ABSOLUTELY TRUE, Brian! :-)

Heh heh, I'm one of the (chronological) Olde Fahrts and KNOW what
his generation's opinions ARE. God help me if I ever get as
stodgily self-righteous as some of them! :-(

>> >I've listened to emergency responders on a scanner before. They don't
>> >use Morse Code, they don't use CW. They use FM/Voice. Somehow they
>> >are effective at it, not having taken a Morse Code test. How can this

>
>Not in Morse Code. If you must retain a Morse Code Exam, then you must
>also administer practical exams for SSB, FM, AM, FSTV, SSTV, RTTY
>(which is pretty darned old), packet, PSK, etc.

Having once had a scanner to listen to (idly), civil aircraft pilots
and tower controllers get right up there on voice speech rates,
faster than most PLMRS Safety radio services (even police). Then
there are the UNtrained radio users such as harbor and inland
waterways communicators, the vast majority being untrained
(horrors!)
civilians (more horror!) communicating just fine on their store-
bought, usually-installed-by-others VHF voice radios.

The difference between them and amateurs is that the above are MORE
concerned about INFORMATION; amateur morsemen are much more
concerned about the MEDIUM, of USING Morse.

To paraphrase McLuhan a bit, "Their medium is their ego massage."

>> But an award for wanting has to do with "I want it so it's my right to
>> have it", which is what I'm talking about. No one has any "right" to
>> get on the air.
>
>Correct. And no one has a right to force their favorite mode on
>everyone else. Your days of doing so are numbered.

I think they expired long before WRC-03 was finished.

It seems that Klein and other Olde Fahrts are mostly looking for adulation by others for being so old in amateur radio. Their self-righteous attitudes stick out all over, demanding that "young folk" do what They had to do...or else. :-(

I could care less what was "expert" in radio in 1932. Two decades plus one after I was born I began using Big-Time HF radio communications and KNOW what was "expertise" from seeing (and emulating) the REAL experts of then. It was NOT morse code or manual radiotelegraphy as "best" a half century ago. Manual radiotelegraphy has been slowly dying towards obscurity ever since...but the chief media agency for ham radio in Newington still believes in it and promotes it constantly as "the best skill" in amateur radio to this day. A rather disgusting RETRO attitude of theirs in my opinion.

Klein really doesn't understand human history or humans, for that matter. EVERYONE has wanted "instant gratification" for something or other for all of recorded history. Even in amateur radio. Some companies in the 1920s were selling ready-built amateur radios, back when manual radiotelegraphy was about the ONLY mode available to the ham community. [that's 80 years ago, four generations, in case some of his contemporaries are afflicted with Alzheimers]

But, if Newington wants the test, then the test will remain. ARRL "represents 'all' amateurs," donut? :-) ARRL is Big Business (to the tune of a reported $15 million profit now) and Big Business SPEAKS. :-(

>That's my point - there's no test any longer. For anything more than
>the ability to memorize answers.

1. The FCC does NOT generate the questions on any amateur
radio license test. The VEC Question Pool Committee does.
By LAW the VEC QPC is composed of radio amateurs.

2. The FCC does NOT mandate the maximum number of questions
on any amateur radio license exam written test. The FCC
specifies only the MINIMUM number of questions. The VEC
QPC can generate as many questions as it cares to.

3. At some point a LARGE number of questions could defeat
even the most eidetic of humans, thereby destroying your
rant of "it isn't a real test because all can memorize
the questions-answers."

>>So all ham radio is is Morse Code on HF? Or is it more than that?
>
>It's a lot more. The question isn't what ham radio is, it's whether
>one should be required to pass a realistic test to get a license.

"Realistic test" = Collitch-level BS to make one a 1930's
radio expert? :-)

Define "realistic test" remembering that ALL the VEs are
also VOLUNTEER radio amateurs.

>>> I don't remember after almost 50 years - but I could still draw them
>>> today, and it's not a test of remembering what's on the test, it's a
>>> test of knowing what's in a radio.
>
>>Then advocate passing the current exam at every license renewal.
>

>What current exam? Memorizing answers and writing them down isn't a
>test.

Oh, my, are you taking on the ENTIRE Academic Community now?

Last college-level course test I had required MEMORIZING
and WRITING THEM DOWN! Damn, all that work leading up to
it and it wasn't a "real" test!

>> You'd probably be weeded out pretty quickly.
>
>I doubt it - if I couldn't pass an Extra theory exam - a real one, not
>the nonsense that passes for one these days - I'd lose my job in a
>second.

[getting Donald Trump wig] "You're fired!" :-)

So, Al, what did you get for a license? A BS-HAM?

Define "real test," show your work.

>What if you addressed what I said when you answer me? Your dishonest
>tactics are transparent.

WHAT "dishonest tactics," olde-tymer?

You've gotten rather self-righteous about "real" without giving
any real answers as to what defines "real."

You got stomped on, par for the newsgroup course. If you don't
like disagreements over your disagreeability, try another venue.

>Quit putting words in my mouth. I wasn't complaining to anyone, and
>we weren't discussing remembering 50 year old tests.

You WERE COMPLAINING...all about "today's tests are not 'real'".

Self-righteousness is readily transparent...

>>But if a practical exam is necessary for Morse Code, why isn't it
>>necessary for other modes?
>
>Maybe we should have one - show the ability to put a clean PSK signal
>on the air. Show the ability to interpret a waterfall display. Show
>the ability to tell the difference between various digital modes. The
>bands would be pretty QRM-free.

You did NOT answer Brian's question.

Does self-righteousness negate having to answer questions?

>So you're in favor of exams that test knowledge of theory? "Draw the
>schematic of ..."? "Explain why long path 2400 bps is impossible on
>14 MHz"? That kind of relevance?
>
>Or the "pick the answer with the resistor like we showed you in the

>example" kind of relevance?

Now you are putting words in Brian's mouth. Tsk, tsk.

Explain how the VEs will love and embrace your collitch-level
AMATEUR radio license exam, needing hours per test applicant.

In case you hadn't been up to speed, the FCC does NOT normally
do any testing of either Commercial or amateur radio licenses.
That's been privatized.

If you wish to change AWAY from privatized testing, you have
ready access to the Proposal method with the FCC. They explain
the whole process.

>>> All you
>>> have to do now is memorize a few answers.
>
>>That's all you had to do then.
>
>How do you draw a schematic and explain the functions of parts by

>or "coil".

Gosh, olde-tymer, did the ham exams of a half century ago get
into vectors and phases? I had none of that in my First 'Phone
exam. I missed a collitch-final kind of exam? :-)

>>> >I used radios in the military. I never used a CW key in the military.

>They just gave you a radio and said "use it"?

Soldiers and Airmen weren't "given" radios. They were ISSUED them.
A half century ago you had damn well take CARE of them or you HAD
to pay for them! By the way, the FCC does NOT regulate federal
government radio use...the NTIA does that, for both federal folks
and military personnel use.

I can give you a brief summation of the "instruction" in using
an AN/PRC-6 HT: About 10 minutes, word of mouth and hands-on
"training." A VHF radio transceiver, it wasn't designed for
AMATEUR radio activities. It couldn't be...didn't have any
place to plug in a code key. :-)

I can easily remember the "training" on lots of other real radios
in the military plus a few more as a civilian working on DoD
contract projects. The AN/PRC-119 took a lot longer, especially

for the Hopset entry. [I had to learn it from its big TM] You
familiar with the PRC-119? A quarter-million of them have been
built. All the military branches have them.

>When I was licensed you had to show an understanding of theory, by
>answering questions that were more than just multiple choice from a
>published answer pool.

Sunnuvagun! In 1956 one of the four parts I successfully
completed was MULTIPLE-CHOICE! How about that? :-)

But that was at an FCC Field Office. 80 miles away in Chicago.
No "conditionals" for Commercials then, senior. "Privatized
testing" would be a laughable subject in '56. :-)

>>> >I've listened to emergency responders on a scanner before. They don't

>>Not in Morse Code.
>
>You must be sitting on oil. Can't you stick to a topic long enough to
>be coherent? You were discussing how someone can be efficient at
>voice commo, not in Morse.

I have no problem with understanding Brian...and I HAVE been
around radio communication for a rather long time. Try asking
me about "efficiency" or "throughput" on any mode, any radio
service.

Can you explain where all the other radio services got their
"training" in radio use? If any at all, that is. You can't
find any other radio service users who get NO "training"
whatsoever nor need anything but an equipment license to use
it? [I'm not talking about CB]

>> If you must retain a Morse Code Exam, then you must
>>also administer practical exams for SSB, FM, AM, FSTV, SSTV, RTTY
>>(which is pretty darned old), packet, PSK, etc.
>
>I have no problem with that.

I daresay a whole bunch of VEs would argue with you after
spending HOURS separately with each test applicant for
one of those "realistic test" ideas of yours.

>I'm advocating real testing for whatever mode. Right now the only
>test is "do you have the fee, can you get to the testing place, and
>have you memorized enough answers to pass". Let's have a test that
>shows whether the testee knows anything. CW, APRS, AX25, PSK - all of

>it. Or separate the licenses. You want to operate FM, you take a
>test on FM and, if you pass, you get an FM license. Want to operate
>SSB, you take a different test.
>
>Not "want to get on the air? memorize some answers and pay your fee".

Tsk, tsk. Plan out a "real test" and then get an estimation
of the TIME it would take for each VE and each license
applicant. Remember that US amateur radio licensing is now
an ALL-VOLUNTEER process. Just WHO are you expecting to PAY
for all the equipment necessary to do your "real testing" on
ALL modes now allocated to US radio amateurs? Government?
VEs? Who will be responsible for their maintenance?

[this group has ALREADY beaten that subject to death in here]

You will have to Petition the FCC for a drastic change in
the number of "endorsements" to the various parts and classes.
You will have to get in touch with the VEC QPC to change the
number of written test questions.

I don't think you will do anything, just sit in here and blow
off steam like the usual self-righteous Olde-Tymer. Geez.

US amateur radio is "working DX on HF with CW." Know CW and
you don't need any theory or other BS. Ipso facto. [or
something fancy in Latin to show 'book-larnen'...:-)]

On the contrary, the Conditional was the General Class
license given away from an FCC office. At the time I got
mine, the distance from an FCC office was set at 75 miles.
Quoting the 1957 ARRL License Manual: "The Conditional
Class license conveys privileges identical to those of
the General Class ..." which incidentally at the time,
was all amateur frequency operating privileges.

Okay - a Wien bridge, using discretes - from memory - for around 1
KHz, and label all values. I'll even allow an incandescent NTCR to
make it easy for you.

>>>no understanding of the curcut is required to render a picture from
>>>memory

Since it can't, I don't. You can memorize enough that it mimics
understanding, but rote memorization isn't understanding.

I would tell you where to insert your request but I am feeling kind

but indeed to draw the schamtic you just called would require either
looking up what made it a Wien bridge or to have it memeorized nothing
about the the name of clasification of the occilator are derived from
first principles that being Maxells equations

you when asked with the cance to check your notes can not described
what YOU had to draw

I stated I could memorize a dozen or so schematics,(indeed that I can
memerize whole plays well enough to get paid for the skill should be
proof of that) and indeed to know the collpitts or wien or the fu
manchu occilator I would have to memerize what made it one verus the
other

> >you don't accept to what extenet memeriztion can replce understanding

>
> Since it can't, I don't.
as I said
> You can memorize enough that it mimics
> understanding, but rote memorization isn't understanding.
but your statement is an amdission to my point. I said meroization can replace understanding. you state it can minic it. I agree fully with that statement

therefore since memorization can minic undersatnding as long as one can memirze enough at a given period of time then this proves that Understanding was never required in the same period of testing.

Understanding is always a good thing if it happens, but short of a great deal of knowledge that is not reuired Memorizing the Caps in paralell add, while Indcutor and resister in paralel go though a more complex formula (that I am not sure how to accurately put in this text but ends up halfing if the value in paralele are the same) is fine and no harm is done by this

There was only one ship in orbit in "Independence Day", the mother ship.
All of the other ships that detached from the mother ship, the daughter
ships, so to speak, were all within the Earth's atmosphere. That is why
the satellites were necessary to overcome the line-of-sight problem
between the mother ship and the daughter ships on the opposite side of
the planet.

earth is the only earthlike planet with a heavyside layer effect and in
centuries these folks never developded the tech to mach WWV (the time
station?)

it was nice movie even I as deadicated a Nododer as they come enjoyed
the ending

It was still Hokey. The aliens could do everything but provide their own
communications globally.

Mark, would you put these five steps on your web blog for me? Thanks. I also want to try to get the moon bouncers to help us out. I think by puting the five steps on your website, a lot more hams will see and agree the five steps are a good idea. TNX, 73

SC

Step 1: No more automatic renewals. Individuals must retest and pass all elements required for their license class.

Step 2: The passing score for written exams needs to be raised to 85%.

Step 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

Step 4: Make the no-code license one year non-renewable.

Step 5: Cancel your league membership until they decide to work to improve things.

Surprise arrival of C-27A 90-0174 at Patrick
````````````````````````````````````````````

It is Thur, 8:28pm EDT (Fri, 0028z).
Moments ago C-27A (Alenia Spartan) 90-0174 (c/n 4101) landed at
Patrick AFB, using the callsign N2290J. This is one of the aircraft of
the Dept of State Air Wing that is based here (Dept of State Bureau of
International Narcotics & Law Enforcement Affairs). The last time I saw
this aircraft here was in March 2001. After that it was seen in Peru in
Aug 2001 at Jorge Chavez IAP in Lima, and later was among the old State
Dept aircraft at AMARC. If planes could talk, this plane certainly
would tell some interesting stories. I hope to get a picture of her
tomorrow.

Again - stop repeating "I don't know the difference between learning
and memorizing answers". We know you don't/

>> You can memorize enough that it mimics
>> understanding, but rote memorization isn't understanding.

>but your statement is an amdission to my point. I said meroization can
>replace understanding.

Mimicking it isn't replacing it. If I understand a circuit I can
design improvements to it. If you memorize how to draw it without
understanding it, you can't.

>therefore since memorization can minic undersatnding as long as one can
>memirze enough at a given period of time then this proves that
>Understanding was never required in the same period of testing.

All it proves is that the method of testing doesn't actually test for
the knowledge it claims to test for.

>Memorizing the Caps in
>paralell add, while Indcutor and resister in paralel go though a more
>complex formula (that I am not sure how to accurately put in this text

Because you never learned it, you just memorized the answers.

>is fine and no harm is done by this

As long as no one cares whether having a ham ticket means that you
actually know anything.

>...........you just memorized the answers.

I never saw the answers before I took the test

I could but the study giude I ordered arrived as I was at the test
session

you assumtion that merely becuase I am tech I know nothing of Phyics

can you even name the names assigned to the grup of equation we call
Maxwells equations
>
> >is fine and no harm is done by this
>
> As long as no one cares whether having a ham ticket means that you
> actually know anything.

no harm is done ever

IndeedI see NO reason why you ever need to have that particular piece
of knowledge at your fingertips

if you need (I guess to do a subtitution or work around a strange
resitance or cap or inductance but like another peice of knowledge on
the extra pool why would anyone need to know what frequence with a
signal was balck in FS ATV

there are porblems with the qustion pools mostly the out dated
knowledge that is still tested for

how would that play out

I am honest. I don't think CW has ANY value in todays world.

you are welcome to play with it but not to us it to restrict access to
some that is part of my birthright and yours

the Congress has no power to regulate Radio except from the ITU treaty
and the "nessary and proper" clause. against the 10th amendment which
reserves powers not listed to the states or to the people.

well bud I am part of the people, and frankkly I am not pleased pleased
at the way you are not using the alloacted spectrum

nothing about CW is required

Interstate commerce. If you don't understand how that gives the
government the right to regulate radio, you don't understand enough
about the Constitution to discuss the subject.

comerence this IS AMATEUR RADIO you dolt
commerce is forbidden

how does Morse code relate to Comerce anyway?

Interstate commerce gives the Congress the right to require Morse Code
testing> Id love to TJ weigh in on that

of course in fact you are beyond any convincing you have decided that
Morse is somehow vital to Ham radio

forutnately my auduince is out there

a gruop you and your postion failed to conivnce the ARRL may be getting
the FCC to drag it feet awhile but do you realy think code testing will
last amore than a few years at the outside

Indeed in last round before 2000 I could not find one of the procoders
who would state he beleived that code testing was not doomed

You're not a real ham if you want the ARS to sound like CB.<<< It
already does around here mostly silent

do you realy distpute this title?

You denigrate the resistor code.

Lots of memorization was required in your day. It's only a bad thing
in 1992 to present. I think I get your drift...

> >That is not true. You wish to change the written exams, not add

Prove it. Show me the exams for all the other modes.

> The question isn't what ham radio is, it's whether
> one should be required to pass a realistic test to get a license.

Yes!!! A realistic test.

> >> No, I'm not addressing *where* the test is held at all - I'm

Mmmm. I see. You are a careerist in the electronics industry and it
pisses you off that hobbyists have equal "status" as you in amatuer
radio. I've run across a lot of that in the past 20 years...

> >> >> From scratch. Let's see how many people could do that today. A

Correct. "WE" weren't discussing it. YOU were. YOU were discussing
how you can't draw what you can't remember.

> >> >> They're still as relevant today as they were 50 years ago.

YES!!!

If you are ever going to save your beloved Morse Code test, this is the
only way you're going to do it.

> > If all radio is merely plug and play, why do the services still have radio schools
>
> That's my point, not yours.

No. It's MY point.

> Or don't you understand what you just said?

I think it is you who don't know where you're going with this
discussion. It's gone beyond your having grief over your favorite mode
to actually having to think about the future of the service.
Conggrats. Another couple of years of RRAP tutoring and you just might
become a rational being.

> >> Oops, that's right - no more relevant testing, isn't that what people

> >argument!
>
> So you're in favor of exams that test knowledge of theory? "Draw the
> schematic of ..."? "Explain why long path 2400 bps is impossible on
> 14 MHz"? That kind of relevance?

Sure. But you have to ask yourself one question. Can the average VE
administer such an exam? If not, can your average GS-7 FCC employee
administer such an exam? If you set up an exam that only an engineer
can administer, then your government isn't going to accept it. So be
realistic in your zeal.

> Or the "pick the answer with the resistor like we showed you in the
> example" kind of relevance?

The exam can be anything your VEC wants it to be. We learned this when
the ARRL went from administering a Morse Code Exam at 5WPM to
administering a Farnsworth Exam at 13-15WPM.

You got me there.

And today's exams still provide that "theory" though they don't prepare
you to actually operate a radio - never did.

> >> All you
> >> have to do now is memorize a few answers.
>

Then go for it.

It is the ONLY legitimate recourse you have for retaining the Morse
Code exam.

Best of luck.

> >> >> So you'd get a license not knowing CW, build a radio (you couldn't buy

Are you drawing a pension from it? "Was."

Are you drawing a paycheck from it? "Is."

And it's so typical for Old Timers to forget that not everyone in the
ARS are CAREERIST PROFESSIONALS. Bitching and Moaning about how
everyone else doesn't know as much as them.

> >> >> What next? DXCC awards for those who *want* to work 100 countries?

Finally!!! I hope you won't hold it against me for badgering you into
such a position.

> Right now the only
> test is "do you have the fee, can you get to the testing place, and

> have you memorized enough answers to pass".

Welp, other than "can you get to the FCC office" things sure haven't changed much in 50 plus years.

> Let's have a test that
> shows whether the testee knows anything.

Remember that you are handsomely compensated for your professional knowledge. Amateur Radio is a non-compensated hobby.

> CW, APRS, AX25, PSK - all of
> it. Or separate the licenses. You want to operate FM, you take a
> test on FM and, if you pass, you get an FM license.

Endorsement. Remember - your VE has to be smart enough to administer the exam.

> Want to operate
> SSB, you take a different test.
>
> Not "want to get on the air? memorize some answers and pay your fee".

And get a vanity license plate.

You are awesome. You're finally catching on.

Who say an old dog can't learn new tricks?

Poor Morkie, he uses the word "commerce" three times in a row and only
spells it right once. So much for that "college education" you claim
you have.

> Interstate commerce gives the Congress the right to require Morse Code
> testing> Id love to TJ weigh in on that

"TJ?" T.J. Hooker?

> of course in fact you are beyond any convincing you have decided that

>comerence this IS AMATEUR RADIO you dolt
>commerce is forbidden

As I said, you don't understand the situation enough to discuss it.
Radio comes under interstate commerce laws. ALL radio does.
Broadcast, public service, CB and ham, among others.

>how does Morse code relate to Comerce anyway?

It relates to radio, which the government has the power to regulate
under its mandate to regulate interstate commerce.

>Interstate commerce gives the Congress the right to require Morse Code
>testing> Id love to TJ weigh in on that

It gives the government to require whatever doesn't violate the
Constitution. And there's nothing in the Constitution prohibiting
having to know code to get a ham license.

>of course in fact you are beyond any convincing you have decided that
>Morse is somehow vital to Ham radio

Nope - I never claimed that it's vital. I never even claimed it's
necessary. You just don't understand conversation.

>You're not a real ham if you want the ARS to sound like CB.<<< It
>already does around here mostly silent

>do you realy distpute this title?

"Title"? I dispute your understanding of common English.

One of the definitions of "away" is "distant". The
Conditional exam was given "away from" the FCC office.

You are failing (or choosing) to understand/acknowledge the difference between understanding the principles and simply rote memorising the answers. It used to be that there weren't a set of questions with corresponding answers - there was a syllabus from which the questions were set. It took understanding of the syllabus to apply the formulae that had been learnt to calculate the answer.

Even TODAY'S tests are not the same ie; Answer A in your study guide will coorespond to Answer A on the exam. ANYONE "memorizing" those answers is nothing short of a FOOL. It is far better to read that book for what little it is worth - for what it will "TEACH" you to understand - thereby making passing the exam almost a done deal. UNDERSTANDING AND REMEMBERING (Memorizing if you will) the BASE material is what gets you through.

As the man said, at one time - there were no SET of exams. If you had no clue of electronics or rules and regulations where it came to Ham radio - you were "guranteed" to fail in front of the FCC. Often - that meant a long trip. Even at that - tests today - most VEs have at least 3 - 5 sets of exams per class. OR you could be given a test via computer which is randomly generated. So, to "memorize" ABCD just isn't going to cut it.

As I said before - ya got to memorize many things to get through life - your SS number, your birthdate, your name, how to spell, read, write, add, subtract, driving a vehicle, etc..... the list goes on - SURELY you didn't "memorize" a simple ABCD answer for MOST of that! Memorizing your SS number, name and birthdate may equivalate to the ABCD method, but - when you were tested in school for subjects - you had NO clue what was to be asked. If you didn't pay attention to what was being taught - you most likely bombed the test.

Again - we're splitting hairs here on the word "memorize". You can "try" to memorize ABCD to pass a test without studying (and hope the test conforms to the pattern you "memorized") OR you can MEMORIZE IT BY STUDYING it - (committ it to memory for life) -therby understanding the principles and

being able to "honestly" answer the questions based on "knowledge" of the subject.

I seriously do NOT understand the hang up on this issue. Maybe "I" am missing something - but it seems to me, I had to memorize (LEARN) a whole list of shit to be able to function in a meaningful life. Your mind is like a computer - you have to program it (study) - to learn things TO MEMORIZE FOR LIFE. Simply trying to recall ABCD on a test without understanding the concepts - you're still going to be dumb as shit even if you do pass. Wouldn't you rather "know" what you're supposed to know? Sure makes one look a bit more inteliigent.
Maybe that is why so many people are so goofy on the highways - they "memorized" answers to the test instead of actually "learning" what the principle were/are. Makes sense to me! For those of you who parachute or do other "life endangering" tasks - I'd sure hate to be you - depending on someone who simply "memorized" ABCD on a test as opposed to "learning" the requirements to fulfill the task.

No wonder this world is so screwed up..... TOO LAZY TO "LEARN".

L.

It is true that the 1950's License Manuals were not multiple
choice but the exams were. The License Manuals went like this:

Q: What is the unit of electrical resistance?

A: The unit of electrical resistance is the ohm.

The exam then had multiple choices, one of them being "ohm".

It is hard to understand how anyone could develop that correct
answer from first principles or formulas. I memorized the
correct answer and it still exists in my memory as something
I once memorized long before I ever knew there was a man named
Ohm after whom the unit of electrical resistance was named.

The difference between memorizing the question pool answers
from the 1950's License Manuals and memorizing the question
pool answers of today is just splitting hairs. I used exactly
the same memorizing techniques to ace the Extra exam in
2000 as I did to pass the Conditional exam in 1953.

Selective amnesia. "No one had to memorize anything" prior 1992.
Not in grade school, not in college, not in industry, not in
real life. Strange perception...

>Ummm? There's no Morse Code test anymore?

The International Morse Code test for United States amateur
radio license classes General and Extra have NEVER GONE AWAY.

That is especially true in the perception of the ARRL which
still manages to insert the "necessities" for morsemanship
in nearly everything it publishes. It's been six decades
since Hiram Percy became ultimate DX but they still keep on
with their demand that all [US] amateurs be proficient in
that old mode.

>> test.
>
>So what is it that you fear?

Klein fears CHANGE and, perhaps, feelings of obsolescence.

Someone who has been a regular worker in electronics (radio is a
subset of electronics) ought to damn well know and recognize
that the state of the art in electronics has been CONSTANTLY
changing. It's sometimes a chore to keep up, whether it be
1950 or 2000 or any time in-between.

>pisses you off that hobbyists have equal "status" as you in amatuer
>radio. I've run across a lot of that in the past 20 years...

I've run across a lot of that my entire life. :-)

I think Klein wants recognition as a "professional amateur" or
"amateur professional." I'm not sure which...

>> What if you addressed what I said when you answer me? Your dishonest
>> tactics are transparent.
>
>You're the one that forgot the circuit, not me. Get pissed at your own

When in doubt of an effective reply, these Fundamentalist
Morseodists
must resort to some form of denigration. Sigh, they never learn...

>> Quit putting words in my mouth. I wasn't complaining to anyone, and
>> we weren't discussing remembering 50 year old tests.
>
>Correct. "WE" weren't discussing it. YOU were. YOU were discussing
>how you can't draw what you can't remember.

This is an indicator that Klein isn't used to computer-modem
communications. He isn't looking beyond his own screen and
understanding that others are separated from it in time and space.
"He" was obviously talking about "old days" of "His." He is not
considering that others do not share his viewpoints.

Considering the Type of Oscillator and "names," he has put
Names as somehow "essential" to the circuit. NO SUCH THING.
An oscillator is simply an amplifier of just-barely-past-unity
gain with positive feedback. The Names were tacked on by
academics long, long ago as IDENTIFICATION of the general form
of amplification-with-positive-feedback.

One can build a Colpitts oscillator, make it work, and continue
calling it a Hartley. Won't make a bit of difference to the
circuit...electrons don't give a damn about human labels. They
work by THEIR laws, not humans' with their imperative labels.

By the way, on a quick bit of checking, I've got text references
to about 11 different oscillator forms, not just two (with his
unknown third type)...and I'm not counting free-running multi-
vibrators which are also very much an "oscillator."

>
>YES!!!

[no...]

>If you are ever going to save your beloved Morse Code test, this is the
>only way you're going to do it.

The only way to "save his beloved morse code test" is to have the
ARRL exercise some BETTER brainwashing than it has been doing for
decades. The League is still trying to use its old persuasion
and, so far, hasn't been able to get memberships from the 3/4 of
all licensed US radio amateurs who are NOT ARRL members...

>I think it is you who don't know where you're going with this
>discussion. It's gone beyond your having grief over your favorite mode
>to actually having to think about the future of the service.
>Conggrats. Another couple of years of RRAP tutoring and you just might
>become a rational being.

I disagree, Brian. Klein is a MORSEMAN. They don't change.
They are rooted in old days long gone, brainwashed early into
thinking that morsemanship is "essential" to "best" radio
communication. It isn't...easily proved by ALL the OTHER
radio services giving up on morse code as a mode (if they
had it once) or never requiring it since a radio service began.

>administer such an exam? If you set up an exam that only an engineer
>can administer, then your government isn't going to accept it. So be
>realistic in your zeal.

Klein hasn't considered the simple fact that, by law, the VEs
do NOT have to be trained test-adminsters. They are simply
VOLINTEERS who have the requisite license class and GIVE OF
THEIR OWN TIME to adminster tests. VEs are accountable only
to the FCC in that volunteer testing. VEs' only "penalty"

in mis-administering an amateur test is a reduction in license
class or forteiture of their amateur license.

Klein and his "tests aren't like they were in 'my' time"
bitchers and moaners HAD their chance to keep privatization
in testing from happening long ago. Legal means to stop it
by NPRM Commentary didn't make their case. Privatization
happened for BOTH amateur and commercial licenses. Now
their whine is long past its time and has turned to vinegar.

>> Or the "pick the answer with the resistor like we showed you in the
>> example" kind of relevance?
>
>The exam can be anything your VEC wants it to be. We learned this when
>the ARRL went from administering a Morse Code Exam at 5WPM to
>administering a Farnsworth Exam at 13-15WPM.

True enough, Brian, but expect ten kinds of flak from the
other morsepersons in here on that... :-)

The VEC can LEGALLY generate a Question Pool with ONE HUNDRED
times the minimum required number of questions. With electronic
transmittal over the Internet the Question Pool can be updated
within 24 hours to ALL VE groups.

Say the FCC requires a minimum of 50 questions on a written
test element. If the VEC QPC generates the Question-Answer
pool with FIVE THOUSAND QUESTIONS (and answers), it should be
obvious that mere "memorization" sufficient to pass that
written test element is out of the question. Anyone who CAN
memorize that prodigious amount is already gifted as an eidetic
and those are extremely rare among humans.

What all that concentration on the "written tests" is about is
just a DIVERSION to keep from replying on the singular morse
code test continuation. The morsemen just haven't been able
to come up with sufficently-valid reasons to keep the morse
test (other than the emotional ones) so they smoke-screen by
bringing up the writtens. Old tactic of theirs.

>> How do you draw a schematic

[ahem..."volume" and "squelch" to name two... :-)]

>Oh, yeh, a magnetic compass and a chart where the satellite is.

Darn you "kids!" Weren't any of those newfangled gizmos
like "satellites" when I was in the Army. :-)

The AN/PRC-8 backpack VHF transceivers (one of which I wore
in PIP Training) also had VFO frequency control along with a
built-in "crystal calibrator." Nothing like the "channel
selection" of a later synthesized AN/PRC-25 (also FM on VHF).

Interesting engineering feat with that VFO control over a
military temperature and vibration environment. Copied from
the old SCR-300 "walkie-talkie" of WW2, devised by Motorola
(also FM on VHF). But, I digress, that was Practical Theory
as applied by professional engineering, used by professional
military people...didn't have the majesty of AMATEURISM and
all its nobility (and class distinctions).

Good grief, all that crying and wailing over Test Privatization!
Maybe we should take up a collection to send him some Kleenex?

Seems to me that COLLEGE-level course tests that I took had a
LOT of memorization. Maybe we should all slam the academic
world for doing the same "memorization?" Hey, why not, all
those who failed college level courses can get a Wailing Wall!

My state drivers' license testing is done from multiple-choice
and that requires MUCH memorization of the applicable laws.
While the CA DMV does not publish the EXACT answers, the have
lots and lots of examples, not only well-publicized but available
free in little booklets at each DMV office. Maybe Klein wants
me to take an ME degree course in automotive engineering just
to drive our Malibu MAXX? :-)

>What a stinking load.

Brian, if you check out the "official" history of the ARRL
you will find out that they BEGAN in trying to circumvent
the commercial telegram system with a relaying of messages
past the commercial boundaries and FEES. If that were
reported today, the journalists would call it "hacking."

>Best of luck.

I hope he tries it. I'm anxious to find out how much hostility
he will engender from his fellow amateurs who are VEs...how they
have to spend many more hours (of their own time) in testing

each license applicant (separately). Ought to go over like a
concrete balloon...

>ARS are CAREERIST PROFESSIONALS. Bitching and Moaning about how
>everyone else doesn't know as much as them.

Klein has yet to define his own label, whether it is "professional
amateur" or "amateur professional." He seems undecided.

I'm one of the (chronological) Olde Fahrts in this group but I
pray to God that I won't ever get as bad as some of them with
their retro attitudes and fixations with modes of their long-
ago youth, the ultra importance of CLASS and RANK. Geez.

You'd think that some of them regard amateur radio like the
USMC! ["the few, the ultra proud (of morsemanship)"]

>> Let's have a test that
>> shows whether the testee knows anything.
>
>Remember that you are handsomely compensated for your professional
>knowledge. Amateur Radio is a non-compensated hobby.

Some of these Olde Fahrts seem to think their amateurism is on
some kind of "higher plane" than ordinary, plebian, work.
They be BETTER than the pros and keep reinforcing each other
with that pipe-dream. After all, the ARRL keeps reminding
them of their greatness, their "service to their country"
(by having their hobby). To hear them talk the nation would
immediately fall apart without these federally-licensed
hobbyists!

We'll have to get Mr. Webster to work coming up with a better
definition of the hobby. Is it "professional amateurism" or
"amateur professionalism?" I opt for the latter but others
may differ.

Beep, beep...

This is not only Usenet (so it's not subject to the laws of any
locality), it's the alt* hierarchy. If you want a moderated
newsgroup, go find one. No one is going to "protect" you here.

That if one wishes to avail himself of a written medium, one should
learn to write. Picking letters at random isn't writing.

Even with the resistor color code, most of us *MEMORIZED*
a jingle like:
Bad Boys Rape Our Young Girls But Violet Gives Willingly
I believe the military used to teach their technicians
to *MEMORIZE* that jingle. Exactly how does one develop
the resistor color code from first principles?

The issue is that if there's something wrong with the tests,
that is not the fault of the test takers. It is the fault
of the test designers. Given a person with a PhD in electronics,
50 years experience, and capable of doing 50 wpm in Morse code,
all he can do presently is pass the present day test requirements
and then be belittled by people like you who are inferior to him
in every way.

Of course I understand. When I took my Conditional exam,
I didn't know Mr. Ohm from a hole in the ground. I simply
MEMORIZED that the ohm was the unit of resistance. I
had no idea how to know that except by *MEMORIZATION*.

However many acts have either obtained frequency assignments from the
FCC and/or FAA for themselves.
Some military units are using squadron common assigned frequencies.
These tend to remain constant from year to year.

you are a clearly a poor ham as maeasured by the amateur code

you clealy have this notion that that rules have ever required thing
NOT in the rules

you are rude and abusive (and then to top that object to being treated
the same by others)

that you are rude enough to call a man you have never met useless as
ignored out of coutesy not missed

the fact is Ham radio sound very miuch like cb NOW on HF and VHF the
sound in many areas is all but silence

Mark, would you put these five steps on your web blog for me? Thanks. I
also want to try to get the moon bouncers to help us out. I think by
puting the five steps on your website, a lot more hams will see and agree
the five steps are a good idea. TNX, 73

SC

Step 1: No more automatic renewals. Individuals must retest and
pass all elements required for their license class.

Step 2: The passing score for written exams needs to be raised to 85%.

Step 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

Step 4: Make the no-code license one year non-renewable.

Step 5: Cancel your league membership until they decide to work
to improve things.

There's two ways to learn: 1. Memorize knowledge, 2. develop
knowledge from first principles. You hate memorization so you
must love first principles.

There's a difference between memorizing a formula or method and memorizing
specific answers to specific questions. The former is called learning, and
can be applied to many situations. The latter is called laziness, and
teaches nothing that can be used for any other purpose.

That is just hair-splitting. For instance, the first question
in my 2000 Extra Class License Manual is: What exclusive
frequency privileges in the 80-meter band are authorized to
Extra class control operators?

Of the four choices, the correct answer is 3500-3525 kHz.

Now what formula or method will yield the correct answer?
I simply memorized that specific answer to that specific
question. The moral is: "Work smarter, not harder!"

If you are learning theory that someone has already developed,
you *are* memorizing answers. I *memorized* Ohm's law for my
Novice exam. I *memorized* the fact that 'I' is the letter
used for current.

If you are not memorizing answers provided by the people who
developed the theory, then you are necessarily developing the
theory from first principles.

Avoiding memorizing answers to questions is a good way to
keep making the same mistakes over and over. Do you avoid the
Q&A sections of all web pages for fear that you might accidentally
memorize an answer?

Which is exactly what "I" also have said. They're splitting hairs over the definition. MANY words can be used in more than one way. Your example is resembling mine. There are some things (many actually) you must "memorize" (learn) for life - to function. To simply "memorize" answers for a test - as you said, teaches NOTHING. It doens't even guarantee passing. I've seen a few fail by that method. IT simply is NOT a good way to go about things in life. Laziness gets you no where - fast.

So exactly what is the "formula or method" for determining Extra
frequency privileges outside of memorizing them? I was too lazy
to use a formula so I just memorized only what I needed to know
for my Extra exam. I still don't know all the Extra frequencies
for all the bands. Since Extras have all frequency privileges,
I don't really need to know where those frequencies are.

In the example YOU give - Cecil - it could be taken either way. In the case of the "frequencies" you're to operate on for a given license and band - YES - you could simply "memorize" (not really commit to memory) those frequencies - for the exam purposes and just refer to a chart from there in. OR you COULD "memorize" them (actually committing to memory) for the purpose of NOT having to use a chart! However, once you use those frequencies after a while - especially if active - then you "would" tend to "memorize" (for life) those frequencies. Yes, it is definately splitting hairs!

Laziness allows one to achieve a goal by the most efficient
route. Some famous German military leader said he would
lots rather have brilliant and lazy officers than ambitious
and stupid ones. I personally would rather see brilliant
and lazy amateur radio operators than ambitious and stupid
ones hanging on for dear life to an obsolete testing
requirement.

Here's the crux of your communications problem. From Webster's:
"memorize - to commit to memory". *Everything* that one
memorizes is the act of committing something to memory. You
definitely need to pick a different word than "memorize"
to describe the concept you are trying to present. Memorizing
is how human beings remember things and it is a good thing.

Eh, excuse me, it was not "I" who started splitting hairs here with regard to MEMORY AND MEMORIZATION.
"I" KNOW what "memorization" means - I was using it in the "SLANG" sense that YOU all are arguing about - memorizing something for just a few moments of need as opposed to a "lifetime". There ARE "SLANG" uses for popular words which do NOT coincide necessarily with Webster. Again, it was not "I" who started this ridiculous argument.

AND for what it is worth - if you're (whoever this applies to) that freaking lazy to not want to have to "learn" something - then it is no damned wonder this country is going to hell. The downfall of our Education system begins with that very principle (refusal to learn). I don't give a crap WHAT Hitler or some other idiot said about being lazy and smart - if you're lazy - you are no damned good to society or yourself for that matter. The REST of us who have to pick up the pace to deal with the slackers. I'll be damned if I ever hire a "LAZY" smart person. I want a person who is going to EARN their keep. Sitting there telling me how things should be isn't what I would hire them for - the purpose is to DO the things as they're supposed to be done.

Working smarter - not harder - is a good concept - but I DO NOT THINK - the originator of it meant for LAZY asses to be using it as an EXCUSE to not have to learn. I live by that concept (work smarter - not harder) often but it sure in hell hasn't stopped me from having to - OR DESIRING to LEARN.

Sorry, my unabridged dictionary doesn't acknowledge a slang
definition for "memorize" as it certainly does for other
words used as slang. You really need to find another word
to use to define your concept. You seem to be talking about
temporary storage, the exact opposite of memorizing.

A brilliant lazy person knows that having the answer
within arm's reach is just as effective as knowing the
answer and probably much more efficient. At this very
moment, I have about 60 reference books within arm's
reach.

Now you're trying to be a smart "ass" (there's some slang for ya) :) .
Again, it was not "MY" argument here - splitting hairs. AND as for thinking,
I think you ought to go back a couple days or better and reread the threads.
Unlike some in this ridiculous argument, I DO think.. I THINK IT IS CRAZY.
Don't you all have something better to do? I don't care what "YOUR"
dictionary shows. There are some out there for example which show the word
COCK for example - as a type of Bird OR the preparing of a rifle or gun for
firing and leave it at that - while a "few" others will show the "Slang"
term used - as many do - meaning sexual organ. SO - ALL DICTIONARYS ARE NOT
CREATED EQUAL. What may not show up in YOUR dictionary as slang - may
certainly - in others. AND perhaps it was a "misuse" of the word
"Memorize" - I was merely trying to rationalize where you AND AL Klein both
were coming from. Now, neither one of you make any sense - he argues against
memory and you against having to do any work. MANY people "misuse" words -
very much and very badly. MY (mis)use was ONLY intended for the sake of this
STUPID argument.

>Ham radio is gonna be flushed big time if this is all you old farts are
>worried about.

Steve, you may be quite right!

There is NO expression from these federally-authorized morsemen
of amateur radio being a HOBBY. [it is a "service" to the
country or something para-military...and "hobby" is not in the
Rules (except by definition)] Indeed, they bristle and come
unglued at the slightest negativism of their mighty endeavors of
"professional amateurism" with all its rank, status, and glory.
Ham radio can't be just "fun" for its own sake, an enjoyable
pastime, something done for personal pleasure. No, one has to
enjoy ONLY Their views, like what they like, or suffer the
consequences of being considered "lower caste" on par with
river-bottom slime.

These mighty macho morsemen demand OBEDIANCE to their views and
opinions, are quick to call disbelievers any name they choose,
always denigrative, condescending, with heavy overtones of
attempted humiliation. They are the unforgiving in regards to
anyone NOT worshiping their status, rank, titles in amateurism.
Unforgiving to the point of attacking ANYONE against them.
They RULE. [they think...but only in here...]

While these mighty macho morsemen take out their frustrations,
resentments, anger against all not idolizing their opinions,
there are some actual amateur radio issues which need addressing.
The removal or continuation of the morse code test for US amateur
radio license testing is still in limbo; official Comment period
on the NPRM was over late last year. Access BPL recently had a
rules revision/addendum added by the FCC with a Report and Order
released on 7 August 2006. No one in here apparently cares about
it since the "ARRL is on the job," "fighting" to keep HF "safe"
(for their membership?). [ho, ho, some "fight"...]

No one cares to discuss two BIG issues. Everyone is busy, busy,
trying to insult anyone who doesn't subscribe to Their views.
Ain't no "discussion" here, hasn't been for years. Internecine

personal warfare is the order of the day. Everyone in here either obeys the rulings of Big Brother in Newington or they are considered lower forms of (barely) life.

The number of US amateur radio licensees is slowly dropping (expirations greater than new licensees to the tune of 10K in three years). Membership in the ARRL (the "representative" of all, according to them) has never been more than a quarter of all US licensees. Technician class licensees are very very close to being a full half of all classes (49.07% of all individual licensees as of 12 Aug 06).

Lettuce all bow our heads and worship morsemanship...these are the salad days of the brass-pounders. Morse is the answer to everything I'm told. [over and over again] :-)

Beep, beep...

For a short time, you had my attention as being correct at least part of the time - in this ongoing dumb argument. But here's where we part ways - "along with the "memory" deal - which "I" didn't start.

A "brilliant" "lazy" person - isn't worth a dime. Brilliant ? BY WHO's DEFINITION? I have a ton of books in my reach too - so whats your point? Yes, SOME are "reference" books - but many I spent hours in "STUDYING". It is the "reference" books I use for things not used daily or even at times month to month. Books on hobbies I have but not enough time to get into as much - or repair manuals for my test equipment - should I need to do so. Having a ton of books at arms length doesn't substitute for KNOWLEDGE OR WORK. Those "books" sure in hell aren't going to "troubleshoot" equipment for me to earn my pay. They're not going to diagnose my body to heal me. They're not going to fix my vehicle "just" by having them at arms length. They may make you LOOK smart! They won't "make" you a Ham operator, Nuclear Physicist, Doctor, Lawyer, Mechanic, etc.
SO what - you can pull (legal/physics/etc) laws out or Meds and dosages, spark plug clearances and so on - BIG DEAL. anyone with half a brain can do that. Even those who busted their ass to get to the top have to keep "working" at it to STAY at the top. Even today, Bill Gates - smart as he is, I'm sure is still working on "something". I'm sure he doesn't sit there with his ton of "reference" books at arms length - and do NOTHING. And I'm DAMNED sure - he had to study long and hard to learn all he knows to get to where he is today. I will bet my last dime he would tell you himself - it wasn't easy. It took LOTS of hard work, dedication, studying, committment, TRIAL AND ERROR - to make things work. TRIAL AND ERROR doesn't get done sitting on your ass. NOTHING worth while - does. UNLESS of course that so called "brilliant" "lazy" person is collecting a welfare check - smart yes - but not enough to be gainfully employed. Ya know - I have knowledge of a man who can recite transistor theory and much much more - formulas and all from

his head. BUT - the poor bastard can't even solder. He has NO clue on how to troubleshoot or repair. So, tell me - what good is it to JUST be "brilliant"? AND AGAIN - BY WHO'S STANDARDS? Hell, I've known supposedly slow and/or "mentally retarded" people that put so called "knowledgeable" people to shame. They talked with more sense, didn't assume they knew everything and sure in hell weren't afraid to TRY to work. Those who "CLAIM" to know everything - usually aren't worth a plugged nickle. We ALL have something to "learn" each and every day of our lives. Anyone who thinks otherwise or that they know it all - are DEAD already. They won't get anywhere in life. "I" for one will NEVER EVER claim I know "everything". I LOVE to learn new things and look forward to each new adventure - be it repairing something - tackling a new problem never seen before to learning things to do with my "other" activities that take up many hours of my life. In THOSE fields - "knowing it all" can get you KILLED.

Sorry dude - I jumped track from agreeing with you..... Pick it apart all you want. LAZY DOES NOT WORK - no matter which way you cut it. I'm leaning in the direction that you've apparently bought one of those GET RICH QUICK WITHOUT WORKING books..... SORRY DUDE - THEY DON"T WORK.

L.

And as for "Hitler" claiming that - as you said about his admiration for a brilliant lazy man - eh..... last I heard - the man was a fruit cake, lost the war, cost thousands of lives, innocent ones at that - and ended up committing suicide - WHAT A LOSER. And I would want to follow his examples/principles - why?

Those weren't the answers, they were the facts that allowed you to
figure out the answers.

>If you are not memorizing answers provided by the people who
>developed the theory, then you are necessarily developing the
>theory from first principles.

The people who developed the theory in the 19th century didn't
"develop" the answers to tests created in the 20th century.

>Avoiding memorizing answers to questions is a good way to
>keep making the same mistakes over and over.

Then you must be an expert in avoidance, since you keep making the
same mistake post after post. Memorizing theory is NOT the same as
memorizing test answers. If information and test answers were the
same, owning a book with the information needed to answer the
questions on any test given in any public school would probably be
illegal in all 50 states.

The same hair splitting as the difference between stealing money and
earning it - they're both methods of obtaining it.

But, since you don't know the difference between "learning" and
"memorizing", nor which subjects fall into which category, you
probably can't see the parallel.

There's no *need* for you to even know that you can use a radio to
talk to people.

There's a need, if we want a ham license to say that the holder of
said license has achieved a certain level of technical competence, to
test for that competence. Otherwise all the license says is "I have
this piece of paper with ink on it".

that is a chnge in tune

oncce you accpet that much of the testing involves memizztion the
question then comes down to where is your beef?
if it is that today we then to use multiguess questions pools verus
short answer of bygone day you likely out of luck the extra cost is not
going to be supported within the present system

I agree short answer would be an improvement over multible guess but
teks you issue up with other don't imply that the ams that have taken
and passed the required tetst have not done what is required

you tread awfully close to libel there AL ask an lawyer if you don't
believe me

at pesent their is no different when I learn the text of the right
answer to a given I leraned the answer to that question

there is no difference, none at all,

for some of the materail the only rational way of approuching it is
memorization, for other section you can learn some part of the
underlying theroy and use it but short of the Full course of Eltromatic
Theroy I hadin colledge you don't learn much

can you describe and USE Maxwell's equation? I can I found the
knowledge very helpfull on the rf safety question in the pools,
butstill useless without memorizing certain facts that have set as
arbitary level in the regs

the fact I need to an rf eval at at 51 watts on 2m is not something I
can know from guasses equation although guass' law allow me to easily
undertsand theprocess of doing the eval

From my dictionary: "cock - 5. Slang (vulgar) a. penis. b. sexual
relations with a man."

Seems my 2230 page unabridged dictionary covers slang very well but
does not have a slang definition for "memorize". Please try again.

> I have a ton of books in my reach too - so whats your point?

If you are ambitious enough to already possess the knowledge,
you don't need the books. I am too lazy to try to possess all
knowledge so I need the books. Not having to memorize all
knowledge frees up my mind for creative thought.

> And as for "Hitler" claiming that - as you said about his admiration for a

The statements that I quoted were from a WWI German military
leader probably uttered while Hitler was still a private or
corporal. Why do you have to try to misrepresent what I said?

So the questions on my Extra exam were irrelevant?
In that, I tend to agree with you. I would like to
see one and only one entry level amateur radio exam
leading to one brotherhood of amateur radio operators
devoid of the jealousy, pecking order, and back-biting
apparent in your postings and others.

Learning is impossible without memorizing. You are
simply ignorant of the definition of the words you
are using. Is English your second language? Again,
from Websters: "memorize - to commit to memory"

I have a question for " an old friend ".

I noticed that you have a difficult time with writing the English language, with regards to spelling and grammar, etc, but you do try to get the thought across. I have a dyslexic daughter with the same problem, and her teachers in grade school used to flunk her thinking she did not know answers to the test questions, when actually, she really did know and understand, but was afraid to write them out because of her dyslexia and the resultant laughter and snickering that followed. When we all caught on to this finally, we demanded that she be tested aurally, where she was asked the questions out loud, and responded verbally with the answers instead of writing things out. This made a hell of a difference in assessing her learning and understanding during her education in the early years. As her father, I was hard on her because of the frustration she caused us at first when we did not understand what was really happening, and I still feel guilty about it to this day.

Are you a native North American, or are you an immigrant? When you did your ham test, or any test, did the teachers/instructors make these allowances or alternate testing methods for you also? Were they easy on you, or did they show frustration? Did they understand where you were coming from? Did you have a pleasant attitude to deal with? I am not making fun of you. This is a serious question. Thanks,

Jack

OK, so maybe I misrepresented your quote "by accident" - big deal. HITLER was still a loser as was/is ANY ONE who bought/buys into that STUPID philosophy you spoke of. Pretty damned sad when you - speaking of ANYONE it applies to - are too "lazy" to "learn". That is almost laughable. Creative thinking - without knowledge? Surely you jest!

I'm done arguing with someone who is "too" lazy to "learn". I'd prefer to talk to those who have "intelligence" to refer to - to stimulate the conversation. Good luck in your monologue.

This was a WWI German officer and I don't recall his name.
Why do you think he was an idiotic strategist? Why do you
think he single-handedly lost WWI? If you know so much about
him, what was his name?

> Being both intelligent and ambitious doesn't appear on your radar?

The pride, lust, and greed usually accompanying ambition are
a good percentage of the seven deadly sins.

I was diagnosed as Duslexic and am at a better occasion verbaly of
course I decided that I would not allow the mocking of the close minded
to stop me expressing myself when I choose
>
> Are you a native North American, or are you an immigrant?
intteresting I am a native american citizen but was in fact born abaord
with my folks working in the srvice of Uncle Sam
>When you did
> your ham test, or any test, did the teachers/instructors make these
> allowances or alternate testing methods for you also?
nothing but given the nature of my knowledge I needed none for the
written testing but the VE system bascial refuses any real accomadation
in making an effort at code testing

in tests in Hs it got easier once my dyslexia was discovered amusingly
it result of the mangling I did in takeing code tests (one of the
tester was also a specail ed teacher and thought I might be dyslexic)

> Were they easy on you,
> or did they show frustration?
depends

> from?
agian depends
>Did you have a pleasant attitude to deal with?

pleasent to a point but frankly to survie and do I wanted I have a
SERIOUS pugnaous streak of course

the posters on here seem to work to bring that to the fore
> I am not making fun of
> you. This is a serious question. Thanks,
in the arguement here frank it shows just what memorization can do Like
Tom cruise I can memorize vasts amounts of data ((I do some
professional acting)

Let me rephrase my original statement. Learning something means you can actually use what you learn. It is more than the ability to parrot what you have memorized. You can memorize the answers from the back of the Teacher's Edition of a textbook, but you are not LEARNING anything. This is exactly what you are doing when you memorize the answers to a pool of questions. You don't KNOW anything. If you LEARN the material, you can take any given set of parameters and formulate an answer to anything you need to know, WITHOUT having to go to the shelf to look it up in a book (which, BTW, you can't do when you're needing complex mathematical equation to figure out the frequency of resonance for a capacitance of 120pF and an inductance of 3uH (or the x of c or x of l for such a circuit).

Of course, none of this means anything to an appliance operator.

Appliance operator: n. c. 1985 An amateur radio operator who knows only enough to tune the VFO on his radio and speak into the microphone. Some advanced appliance operators know enough to connect other peripheral devices such as digital mode devices or power amplifiers, but do not know how these devices work, nor how to construct such devices.

An amateur radio license is an entry level license. It is
not a university degree. When I obtained all amateur privileges
at the age of 15, I didn't know squat. All I had done is memorize
the ARRL License Manual. Six years later I had a EE degree. What
is wrong with learning the technical stuff after one obtains his
entry level license?

Do you know how to construct an IC-756PROII?

A MENSA membership means you have a high intelligence quotient. A high
intelligence quotient does not necessarily mean you know anything, only that
if you apply yourself that you have the ability to learn more easily than an
average person. I know some very lazy MENSA members that can't even spell a
large number of the words they use.

In other words, even people above average intelligence can be and often are
too lazy to learn. They do manage to apply what they do know better than
most.

For a long time, they were.

The coding system was similar to that for resistors, but there were
additional stripes or dots to denote voltage rating.

They didn't. I still have boxes of silver mica caps
that use essentially the same color code as resistors.

Here here (!)
Cecil, I'm happy to agree with you.

Modern testing techniques are intended to be transparent. This is true
for FCC exams, Postal exams, any and all government qualification exams.
(And because of this, all qualifying exams in the private sector, as
well.)

It took a lot of litigation to get there. Government agencies had to
prove that their qualifying exams were directly linked to the specific
tasks required of the given position for which the individual was applying.

A Postal Carrier needn't know Pythagorus' theorum to deliver the mail.
I took the Postal Carrier exam 35 years ago and did not do well. I
wasn't good at sorting on a timed basis.

This notion of a "cheapening" of FCC requirements because the question pool is open to the public is a red herring: transparency is the rule. If you look at the question pool and study it, you will gain the necessary expertise to pass the exam. This is not cheating, nor is it short-circuiting the "REAL" ham radio "requirements" that some view as sacrosanct.

I used ARRL manuals to pass the Extra Exam and I do not defer to anyone in this regard. Does this make me a ham radio genius? Not AT ALL. Man, I have SO MUCH to learn. This newsgroup is "potentially" very helpful! For that, I give thanks.

You know, I love ham radio. I'm happy so many join the ranks each year. If there still is a concern out there, be an Elmer and address it.

To me, MENSA is a sort of "Who's Who". As such, one can value it
appropriately or ignore it completely. To me, it's a sort of conundrum:
If you are confident in your intelligence, why do you need validation?
Is it the obverse of the T-shirt "I'm with stupid"?

My apologies for adding to this old and fraying thread.

John

Mensa - who gives a damned? Most of the "brilliant" people I've ever met -
had their thumbs up their ass when it came to doing the basic things in
life - they can't do them. What the hell good is a "brilliant" person if
they're too stupid to know how or lazy to do "basic" things? If having a
Mensa number means you're bankrupt in common sense or "lazy", I'd rather not
be a member - thank you. Often, it is "common sense" which gets you
through - NOT "brilliance". From all I've ever heard and /or seen -
"brilliance" and "common sense" don't go hand in hand. Sitting in a chair
with a bunch of books behind you to make you "appear" smart and not getting
off your lazy ass to use it or to further your education - is not a
"productive" person. I know a few welfare bums who fall into that
description- "appear" smart, "act" smart - lazy as hell. Being in the center
of a University Library with books on most any subject - is NOT going to

make you any more intelligent if you don't venture to "learn". Even at that, if you don't use it, you lose it.

This is funny as all hell..... some shmuck "claiming" to be a "genious" coming in here and trying to make the rest of us seem inferior to him. No one is any better than the rest of us. Their crap doesn't stink any less than ours. Just when he starts losing his grip on the argument, he pulls this so called mensa number out - just like a race card. So, what, we're supposed to take pity? Bow down? I don't think so! The answer to that is "PLONK".
There was another party a few years ago tried that - and after about a month - him and his self proclaimed "geniousness" - disappeared. The idea here is to come in - share ideas, thoughts, "help" if possible - NOT try to place yourself on a throne above all. I can assure you the majority of us don't tolerate that attitude. You can agree or agree to disagree on any use of words, theories, laws, principles, strategies, etc. But when you put yourself on a pedestal..... the game is over - you'll either find one of your mensa friends to keep you company or be an awful lonely person on here.

To respond to a statement regarding me in a previous post - Hams like "me" NEVER kept or attempted to keep any one off the air. If anything, I've gotten people "involved" in Amateur Radio - with one (12 years old at the time) going on to higher education once out of high school - and getting a very good job from it. His parents couldn't thank me enough. Even if that is the only good example of the good I am/was able to do - in Amateur Radio, then I'm satisfied. But I haven't stopped there..... I teach Amateur Radio classes when asked - and on other occasions - I've taught basic electronics - taking those folks beyond the Study Guide.
It is nice to be able to "use" and "impart" that knowledge so that others can benefit.

I don't know if there is actually any truth to this BUT - the dumbing down "allegedly" started back in Reagan's day or was it George Srs? - when someone here in the U.S. apparently couldn't pass the exam - and being he was in good relations with the then King of Jordan, the King of Jordan asked Reagan or Bush Sr to do something to help out. I've heard that story a few times. True or not - the tests have changed drastically.

The tests really (in my opinion) aren't meant to "teach" anything or shall we say - show any "in depth proficiency". The study guides give you "just" enough to pass the exam - without going into a lot of information. You certainly can't pass a novice OR extra exam and instantly qualify yourself as an Electronics Technician. The material just isn't that in depth. For that matter, the GROL tests and accompanying manuals don't do a hell of a lot either for "teaching" - or showing "proficiency". They're merely meant to get you in the door - period. The latter is scary - considering that the GROL though diminished in need in most cases as of this point in time - IS still required in "some" cases - as a sign of "knowledge" of the subject. That is why many places that I know of, produce their own exams - designed to actually test your knowledge. One guy I know - been in 2 way radio for years, good at it, smart as a whip - took an entry exam to get a new job. Said that was the most in depth - "drilling" - organized test he ever took, considering he had his Commercial license "pre- GROL" and his amateur license.

I have read articles from a leading publication in the industry that there is a move afoot to get the FCC Commercial License - some teeth put back in. Why? - Due to an increasing issue with interference and so on. Seems to me, though in some cases - the horses are already out of the barn and "maybe" too late to try to close the doors, changes "could" be made. What gets me,

is that article spoke of another agency doing the testing and licensing. So - in other words - the FCC - our "RADIO" governing agency has lost its grip on this? IF the FCC can't control it, how the hell is some "private" agency? Not that it would happen, but I have to wonder just "how" they may want to try to differentiate between those with GROLs and any subsequent endorsements - of those who just read a "study guide" enough to pass - from those who have "actual" electronics schooling?

As an examiner for FCC Commercial AND Amateur exams, I've seen many folks come through. You can usually pick out those who know their stuff and those who do not. You can also usually pick out those who DO know the stuff but freeze on exams. For what it is worth - at least in my experience here, most who have "schooling" do NOT usually bring any type of "study guide". I've tested whole groups of School students and not one study guide was to be seen. Same goes for those who are "comfortable" with their knowledge of Ham radio. They simply feel - if they don't know it by test time - then no sense testing. For the GROL, it is an expensive proposition if you don't know your stuff or haven't been able to grasp the study guide material. Back in the day - it was usually the cost of a LONG trip (maybe lodging too) to an FCC office, now they're more local but cost is still there - pass or fail. Come to think of it, if the current rate increases stay the same - soon - the Amateur Exams will cost almost if not as much as the GROL! They're almost half way there now - depending on which VEC/TCM you go through.

Yes, it is going to be very interesting indeed to see how things progress not only in the Amateur Licensing area, but also the "Commercial" side as well - for the next few years at least.

Eh, not really..... I'm "agreeing" with you as to his content. As to mine, I was basically replying to what Brenda Ann had said. He didn't hit a "soft spot". People like that - I just find very ignorant. You're right, it is funny! My exchange with him died with my last contact with him. I'm merely replying to others. AND giving my opinion about people like that. Him get to me? THAT IS FUNNY! I've had better people try. So, in that regard I'll disagree with you. He didn't budge my blood pressure - one iota. So, sorry - he gets no stars. I've just agreed to disagree with him and am agreeing with the others - YOU included (to the point mentioned).

Mensa - who gives a damned? Most of the "brilliant" people I've ever met - had their thumbs up their ass when it came to doing the basic things in life - they can't do them. What the hell good is a "brilliant" person if they're too stupid to know how or lazy to do "basic" things? If having a Mensa number means you're bankrupt in common sense or "lazy", I'd rather not be a member - thank you. Often, it is "common sense" which gets you through - NOT "brilliance". From all I've ever heard and /or seen - "brilliance" and "common sense" don't go hand in hand. Sitting in a chair with a bunch of books behind you to make you "appear" smart and not getting off your lazy ass to use it or to further your education - is not a "productive" person. I know a few welfare bums who fall into that description- "appear" smart, "act" smart - lazy as hell. Being in the center of a University Library with books on most any subject - is NOT going to make you any more intelligent if you don't venture to "learn". Even at that, if you don't use it, you lose it.

....
This is funny as all getout <angry diatribe snipped>

Obviously the person claiming to be a Mensa member has poked a figurative finger into your soft spot. Sensitive, are you? Taking umbrage? Apparently you feel that the alleged Mensa member has slighted you either directly or indirectly, ergo your lengthy and uncalled-for diatribe.
Of course, in your self-righteous response you probably did not consider the possibility that the "Mensa" person was a troll. Makes no difference, does it? He certainly set you off on a rant.
I give him five stars for that.

Sit back, read the post again and view it with a bit of a tongue-in-cheek sense of humor. It will lower your blood pressure. Even if the guy IS a Mensa member, by the simple fact of him bragging about same shows that he is a blowgut braggart whose ego has gotten in the way of common sense.
I doubt he is what he says he is, but he certainly elicited a wordy response from you.
He wins. You lost.

Exactly as you are trying to use your Morse code skill to make nocode
techs feel inferior to you "real hams". (Incidentally, what good is
Morse code skill when one can't even spell "genius"?)

> No one is any better than the rest of us.

Strange words from a man who has been pounding his chest because knowing
Morse code makes him so superior.

I agree with the Morse Code (or whatever exotic name it has evolved to in modern day) as still being useful. I think morse code is a lot of fun, and very much a part of the ham hobby's old-time, nostalgic glamour. I see no harm in making it part of a ham's testing and licensing requirement. I feel that it is definitely useful, and provides communicants with an international second language to deal with in emergencies.

I do not think the newer hams are idiots for wanting to do away with code, but I think they are missing out on a piece of irreplaceable history that is so easy to maintain and cherish forever.
Viva le ham.

Jack

If I remember correctly, the incident had nothing to do with
dumbing down technical issues. It was all about the outdated
Morse code testing requirement which a lot of countries have
indeed dropped.

> The tests really (in my opinion) aren't meant to "teach" anything or shall

Of course not. They are entrance exams, not university degrees.

> They're merely meant to get you in the door - period.

Exactly! That is their entire purpose. They open the door to
a lifetime of learning.

My reporting my MENSA membership is usually a troll aimed
at someone who feels himself to be superior to everyone else
for some obscure reason, e.g. Morse code skill. Note that
not only is a lack of Morse code skill belittled but MENSA
membership is also belittled. In fact, any difference from
the attitudes and attrubutes of the poster will be belittled.
Even correct definitions of words have been belittled.

Truth is, I got into MENSA because someone lost a bet and
paid for my exam and dues. I am not presently a member of
MENSA because the yearly dues exceed my threshold of pain.
But I am a member of OOTC and FISTS, #8741. :-)

I don't view testing in this regard as a form of teaching. The goal, as someone posted, is to "get in the door". What's wrong with that?

Memorizing precise answers and not processes is lazy, I guess. However, following ARRL testing manuals, you HAVE to learn the processes.

Deep understanding of all principles involved will gain you an educational degree. That's not the intent of FCC testing.

It's a hobby! Get in the door and have fun.

I am sorry, but do you type with your feet?

Anyway,,
Back in the old days, we used to walk 5 miles in the snow to the FCC
field office to take our exams. We had to kneel on radiators while we
took the test. We used slide rules and crayons AND WE LIKED IT!!!

Then we'd wait 3 years to receive our license which gave us time to
teach electrons to enter and exit all the tubes...stupid little buggers,
those.

Boy, those were the days. When a ham was a ham, brass was for pounding
and AM signals were as wide as the day is long.

These "young" whippersnappers get off too easy.

I say, rank priveleges on the basis of how big an RF burn you can take,
or on the basis of personal weight.

I may have said it before: take the FCC out of it completely and go with the FDA. Those boys know how to grade.

(Too much tea this morning!)

John

Like new, works great. Includes software and USB cable as well as everything it originally came with. Only 2 months old.

About 5$

Especially since 100% of all cell communications will be no longer readable
by the end of October!

Going totally digital!

I'll have to dig mine out and look at it but I believe it covers more than just the cell phone frequencies, unless, by some strange chance, someone on Usenet was just trying to be a "smart-ass". What are the odds of THAT?

Came home from vacation to discover the right side of my BC 895 XLT display dim.

I didn't get into tearing it apart yet, but does anyone know if there are 2 bulbs in the unit? What type & where can I buy them?

I have replaced some bulbs in other radio shack models but I did a yahoo search can not find anything on 895's for bulb replacement.

Thanks in advance.

If MENSA membership is important to you, fine. Most of us find it a bit pretentious and downright silly.

If someone wants to use MENSA to elevate themselves above the rest, they are perched on very rickety stilts.

Question (this is not a flame):.

1. Is the ability to decode Morse Code transmissions, in one's own wet modem (brain), at high speed, proportional or even relevant in any possible way to one's ability to pass a mensa test and be accepted for membership? Is mensa membership useful? Is mensa membership a measure of Morse wet modem throughput?

Cecil, I think you already answered all of the above as 'no'. That doesn't mean I like the the brand of motorcycle you drive. I do not. I like BMW's that don't require a toolkit for every 100 miles on the road.

2. Or, (as I suspect), is Morse ability only useful after you have purchased one's HF equipment, now that one has passed the test (whose investment you otherwise would not have made until you passed the trivial but compulsory 5wpm test for Morse code proficiency) to have to have fun and prevent future alien attacks?

I am an extra class op who passed 13 wpm several years ago, can do 25 wpm now and getting better all the time just because of heavy (and fun) Morse action on the cw sub-bands, and wanting to know what people are saying and being able to communicate back; in fact, CW is almost as good as psk31.

3. Just the same, how much does this mensa thing cost? Is it worth a dinner for 4?

Rusty, let me answer you this way. In my humble opinion, a MENSA
level IQ is worth magnitudes more to its possessor than is Morse
code skill even within the Amateur Radio Service. If all the coded
hams with IQ's less than 100 were transformed into nocode techs
with MENSA level IQ's, the ARS would be much better off and a lot
less prone to silliness. The ARRL might even stop publishing those
gross technical errors, e.g. reflections don't exist.

I believe there are 4 of them. Uniden part #BPZY0036001.

I looked quickly on Radio Shack's site, but only saw some 12V microlamps. The ones in the 895XLT are 8V. The 12V ones would probably work, but they'd be too dim methinks.

Uniden probably has a ton of them, so give 'em a call and see if they can send you some replacements.

RE-READ IT - there were TWO people here in the beginning "splitting hairs" about the use of or perhaps MIS use of the word "memorization. One was leaning towards "memorizing" "ANSWERS" purely to satisfy an exam..... i.e; ABCD..... it isn't quite that simple. On the other hand, the other argument was in the "true" sense of the word - TO MEMORIZE (commit to memory for life).

Let me set something straight. "I" was NOT beating my chest about "CODE". I was only in the argument with regard to the use/misuse of the word "Memorization". "I" think code has its place - but not as it once did. It sure isn't keeping the bands clean by keeping it in place. "I" don't use code - that often. I think also, it "can" be fun to learn for those who may want to try it. Some people may - as has been proven, still - others won't - which also has been proven. THAT IS MY stance on code. As to the "mis"spelling of "genius", hey - what can I say - I'm human, I DO make mistakes. I don't rely on "spell check" techniques - so ..... an error does tend to sneak through from time to time. It doesn't matter one iota to me if you do code or not. "I" surely am not here to pass judgement on you or anyone else by that ability or inability (since some DO have trouble getting it). OR lack of interest "may" be more specific. I have quite a few people I talk to on the bands who are "NO CODE Techs. They're not interested in the code - OR wanting to climb any higher in license class. Its cool with me..... That is their thing - not mine. It sure doesn't mean we can't have a decent conversation - be it on the air via repeater, simplex, computer mode or face to face.

:)

Cecil

you're trolling, aren't you?

If you truly believe this stuff, you're in sadder shape than I thought.

Your MENSA membership is dreck, dribble, dross. With code, there is, at
least, some grounding in practicality: a real world function.

"Whew! I knew I was a genius but now I have PROOF!" How completely sad.

MENSA has perverted the very nature of IQ in a manner not dissimilar to
the way Home Owner Associations have perverted the notion of individual
freedoms (guaranteed by our Constitution).

Enjoy your little trophy but I'm sure you'll keep yourself insulated
from the derision you richly deserve when you bring it up in this newsgroup.

I can tell that you're not a bad guy...but, the mensa thing makes you
seem, I don't know, ...(fill in the blank)

Be Good.
Hell, be more egalitarian for once in your life!
We all share a HOBBY!!!!

Those who memorize answers instead of learning concepts - what you
would have seen at the beginning of the thread had you paid attention.

>you tread awfully close to libel there AL

Look up the definition of "libel". Part of it is "malicious
defamation". Calling a penny a cent isn't malicious, nor is it
defamatory.

> ask an lawyer if you don't believe me

You need to take your own advice. Also you need to ask an English
teacher - you don't seem to know the definitions of a lot of very
common words.

Sorry, I don't share your religious incredulity. I don't recognize
"sin" as anything but a nonsense word.

There are a few classes - ONE class is entry level.

> It is not a university degree. When I obtained all amateur privileges
>at the age of 15, I didn't know squat.

"When I robbed a man at the age of 15, I wasn't arrested." Does that
make robbery legal? Your experience is only that - your experience,
it's not definitive.

> All I had done is memorize
>the ARRL License Manual. Six years later I had a EE degree. What
>is wrong with learning the technical stuff after one obtains his
>entry level license?

Nothing, if you don't care that the license means nothing more than
that you have it.

They are all entry level. The Extra class license allows
entry into the Extra class frequency segments. An amateur
license is not a status symbol. Its only worth is the
privileges granted. In the 1950's, generals, conditionals,
advanced, and extras all had the same frequency privileges.
I would like to see one amateur license granting all
amateur privileges so this crazy irrational pecking order
nonsense would cease.

I would certainly be able to pass it

your effort to smeear anybody that disagrees with you not withstanding
or indeed if you succeeded in producing a test I could not pass you
would exclude a lot of people besides me and kill the ARS which seems
to be your objecctive wether you know it or not

further if you produced a test that some woth an MS in GeoPhysics
could not pass it likely would ntot stand a court challenges anyway

indeed I guess there we have

YOU want the license as some sort of badge of honnor, the rest of one
want to use and explore what it grants us

never said it was actiionable

do you understand english it seem not

however when you keep compating someone to theifs in time I suspect it
would rise to being actionale

what protects you is that judgement is not particularly collectable
and therefore not worth an atorneys time

Since you claim to know that, one could say that you're asking for
whatever you're getting, couldn't one? One can hardly complain that
one's shoes are getting dirty if one freely chooses to walk in
ankle-deep mud, can one?

Using that logic, a PhD oral is an entry level exam - it allows entry
into the ranks of those with PhDs.

> An amateur
>license is not a status symbol. Its only worth is the

Except that there were no advanced class licenses, and the extra was a
prestige license.

That's not a sig line, it's part of your post. Sigs appear UNDER the
tear (and you don't even have a tear). Put your sig in the signature
area, not as part of your post. (If you can figure out how to use
Agent.)

Like it was "killed" all through the 30s, 40s, 50, 60s, etc.? Code
was required, as was drawing schematics. Yet there were more hams
every year than there were the year before. You have a strange
concept of "kill".

1) A theft is an act - I wasn't comparing anyone to an act.

2) Quote where I'm comparing you to anything.

>>Telling you something true about yourself isn't actionable, unless
>>done with certain intent, which you'd be hard-pressed to prove.

>never said it was actiionable

You keep using the word "libel" - that means actionable, since libel
is a civil tort.

>do you understand english it seem not

Oh, I understand it. It's difficult to get published if you don't
understand the language in which you're writing. Your posts, however,
demonstrate a clear lack of ability to use the language to communicate
clearly.

>however when you keep compating someone to theifs in time I suspect it
>would rise to being actionale

If I ever did, which I never have.

>what protects you is that judgement is not particularly collectable
>and therefore not worth an atorneys time

How would you know whether a judgment against me is collectable?

Or is this another case of what you say having nothing to do with what
you mean?

No, actually, "for the purposes of posting", your opinion doesn't
count at all to most people. But, since you have such a limited view
of the world, you won't understand what that means.

you reply which had zero relavance to my statement clipped

My statement if you enacted a standard that would in fact keep me from
passing, that would kill the ARS. That sort would require far more
than merely adding schamtics or going to short answer questions. it
would involved a test that would serious chalange Cecil and Len
Anderson both RF engineers, doing that would kill the ars as would the
asiine proposals of Mr Slow Code and many others

your notions are simplely not exexutable in anything like the current
sytem

the notion that multible guess is acceptable for pilots and drivers
(amoug others) but ham radio ops is silly

As far as I know, there is no governmental PhD class
license and therefore no governmental ranks of those
with PhDs.

>> An amateur

You don't seem to know much about 1950's ham licenses.
You didn't know that Conditional was a General exam
taken by mail. You don't know there were many Advanced
class hams in the 1950's faithfully renewing their
licenses. My Elmer was an Advanced licensee. Here's
a quote from a 1957 ARRL License Manual: "Holders of
Advanced Class licenses may renew them so long as they
can comply with renewal requirements."

I've seen them go anywhere from $100-$200 depending on condition and whether
or not they have everything with them, box, charger, manual, etc..

Good luck, they're nice radio's.

Oh? I didn't know that we legally appointed "representatives" to tell
us what people think. Who, pray tell, are these telepathic
"representatives"?

>but indeed enlight me
>what value is derived from the knowledge that an occiclaotr is
>colpitss type or hartley

Plenty of value to those who have to work with oscillators of various
types. It's difficult to design a circuit when you have no
understanding of it.

>without adding something to mix they answer it has no value

Your contributions to these threads are what have no value.

>>But not to those actually involved in the study of memory and
>>learning.

>when did you become nominated to speak for them

When those telepathic representatives of yours became appointed to
tell us what everyone thinks.

>you are very sloppy about your facts

How would you know? You wouldn't recognize a fact if it came up to
you and hit you.

Klein, you said you were an OF. Any olde-fahrt ought to KNOW that
silver-mica capacitors were color-dot-coded for about a quarter
century. [look in the 1976 ARRL Handbook] Those flat cases
were eventually displaced by dipped silver-mica.

Paper tubular capacitors in molded plastic tubular casings were
marked with color bands and were on the market for at least
15 years, maybe 20...until aced out by ceramic disc capacitors
for general bypassing and coupling applications (by both tube
and transistor architecture electronics).

ANYONE with hands-on experience in electronics between 1950
and about 1970 would KNOW that. [okay, folks, looks like
there's another imposter here...at least this one isn't
trying to pass hisself off as some marine NCO...:-)

You are still using crayons but I doubt you know how to
use a 1950 slide-rule...too complex for brass-pounders.

Oh, and FCC Field Offices were NOT 10 miles apart in the USA
now, in 1956 (when I took a train 80 miles into Chicago), nor
before then.

>Then we'd wait 3 years to receive our license which gave us time to
>teach electrons to enter and exit all the tubes...stupid little buggers,
>those.

Wrongo, olde-fahrt. Electrons, fields, and waves will ONLY
obey THEIR rules. You can't "teach" them anything. All you
can do is provide paths for them...on THEIR terms.

>Boy, those were the days. When a ham was a ham, brass was for pounding
>and AM signals were as wide as the day is long.

That was well before 1960...like before WW2.

>These "young" whippersnappers get off too easy.

Pizza off, olde-fahrt. 51 years ago I would be walking a mile
from a corner of an airfield NE of Tokyo to the transmitter
house in the center which housed 41 HF transmitters ranging
in power output from 1 KW to 40 KW. Not a single one of
them used manual (morse code) radiotelegraphy modes. About
two square miles of wire antennas doing 24/7 radio circuit
transmission to CONUS, Hawaii, Phillippines, Okinawa, Korea,
and a MAG in Vietnam. Six of those circuits used multichannel
SSB (the commercial variety, like in-use prior to WW2).

I STARTED that HF transmitter site work in '53, NO military
schooling on kilowatt transmitters, RTTY, or SSB and NO
"CW" skill necessary.

>I say, rank priveleges on the basis of how big an RF burn you can take,
>or on the basis of personal weight.

Sounds like you had TOO MANY of those "RF burns."

See Dr. Robeson in here...he will bandage your "burns" with
one of his medical-practice certificates...those are sterile.

>I may have said it before: take the FCC out of it completely and go with
>the FDA. Those boys know how to grade.

"Ham is the butchered meat of swine?"

Last guy I heard utter that phrase is SK...used to work with him
(he was a code-tested Extra)...he came out with that every once
in a while when some amateur morseman got too full of himself.

>(Too much tea this morning!)

Try a detox program, okay? QRT.

If MORSEMANSHIP is important to you, fine. Most of US find it a bit
pretentious and downright silly.

If someone wants to use MORSEMANSHIP to elevate themselves above
the rest, they are perched on very rickety stilts.

[I'll just add something like...]:

Stilts are needed by morsemen because their appearance, relative
to REAL radio people, are very short. They try to gain "height"
of their reputation by using 1930s standards in the year 2006.
Tsk, they don't realize that their new "height" still falls
short of everyone else...

I would have thought there was little point to it and that it would
make the on baord radio trickier to use the last thing a driver need

Since you couldn't pass a final in a high school physics class, you
aren't qualified to determine what someone with an earned EE could or
couldn't do. As one who earned mine, I am.

>the notion that multible guess is acceptable for pilots and drivers
>(amoug others) but ham radio ops is silly

So you don't understand the difference between "choice" and "guess".
We'll just add that to the *L*O*N*G* list of things you don't
understand.

Source record: 7402

I purchased this aprox 8-10 yr ago after reading a MT review on it. I have never used it and it has just kicked around the house all that time. The best description I can come up with is that it's sort of a portable amplified (uses 2 aa's) rabbit ear type antenna that the shack advertised for vhf/uhf/fm and MT seemed to think it was a great scanner antenna. I'll ship any place in the continental U.S. for $25. RM~

So we have to give everyone a driver's license, even those who can't drive? And let everyone vote, even those who are mentally incompetent? No discrimination based on anything?

The Constitution doesn't prevent us from imposing standards, Markie. And the law certainly doesn't guarantee that we're all equal, only that we all be given equal opportunity to EARN what we want. There's no Constitutional guarantee that the government will give us everything we want, or that it can't treat different people in accordance with those differences.

sure I do I just don't why Ham radio requires a system more rigouous than pilots

lets not you want to tkaet the same notion into Radio why not hold
pilots to same sort of stanards as Radio Ops after flying is a bit
more dangerous

>
>So we have to give everyone a driver's license, even those who can't
>drive?
no becuase driving is dangerous peotcaily ham radio is not

furtehr what evidence do you advance that Higher make beter radio ops

indeed you reject the notion that higher IQ means much of anything
> And let everyone vote, even those who are mentally
>incompetent?

most esp we should not restrict the mentaly imcpomtant form from
voting since the likely result in time is everyone being declared so
> No discrimination based on anything?
not on something un related to the matter being regulated

Morse Code was never vital for Hams to be operate once we had voice we
could have done away with such testing (aprt from the treaty) the
requirement for Morse being to avoid the military on cw would have
meant a voice that could read code would simply have to qsy everytime
he heard CW)

today theere is NO requirement for CW testing. It is not needed that I
know CW in order to operate at all. Indeed even if we don't stick to
band plans I don't need to be able read a CW signal to know it is
there, and reconize the frequency is in use
>
>The Constitution doesn't prevent us from imposing standards, Markie.

can't you show enough manner to call me by my name which is Mr Morgan
since I gave you no leave to address me familier

>And the law certainly doesn't guarantee that we're all equal, only
>that we all be given equal opportunity to EARN what we want.
and that anything in our way must relate to matter being regulated

no harm will result if I don't know Morse code many hams ven now on HF
don't know it well enough to use indeed there was never a test to
determine if we could use it on the air at all

I expect the Govt not to require mye to demstrate a skill that is
completely uneeded in order to access public airwaves

the FCC (and I et al) have regrected as false all the arguements that
Code testing makes one a better operator

you have advanced no real reason why I need to know without looking ti
up whattype of occiclator a given circut is

you adavnce no answer to how we would insure that the tests you want
to see are fairly given and graded accross the country
> There's
>no Constitutional guarantee that the government will give us
>everything we want, or that it can't treat different people in
>accordance with those differences.

no one is asking the govt me everything we want or the rest of the
nosense you are spouting

UNTIL the Code requirement is abolished for good - which to my
recollection - it has not for U.S. hams (yet), then to get on H.F. you most
certainly are required to pass the 5 WPM code exam.

> no harm will result if I don't know Morse code many hams ven now on HF
> don't know it well enough to use indeed there was never a test to
> determine if we could use it on the air at all
>

Also, I think if you read Part 97 - you may be surprised. VEs can give
either a receiving test OR "sending" test. USUALLY (most of the time) - it
is a "receiving" test. Whatever it takes for them to have "the examinee"
prove his/her knowledge of the code at 5 WPM. For example, you could claim
tone deafness to me - ok - so instead of "receiving" the code, I could have
you "send" the code. Before the code dropped to 5 WPM - you could get a
doctor to sign a waiver and you got code credit. BUT once the code was
dropped, so too were the waivers. I know it may sound hokey to have you
"send" code if you claim tone deafness, but the other options are a buzzer
sending YOU the code - you decipher - or a flashing light or whatever. AND
the FCC stated to the VEs that THOSE claiming handicaps are the ones
responsible for supplying the equipment to enable them to have every
reasonable chance of passing. Also, that code test "could" be broken down
into segments. Instead of playing a tape with a full message as you would to
most applicants, the VEs could break it down in segments of letters, words,
sentences at a time for someone with severe handicaps. WHATEVER was able to
give that applicant every reasonable chance of passing without much stress.
Argue that with THEM - "I" didn't make the rules.

So, just when was it that CODE was "abolished" as an "Exam" requirement?
Maybe I missed some mail from the VECs and FCC to tell me to quit testing
for 5 WPM code to get on H.F. ..... You give me a date that it went
into effect, and I'll retract my post.....

OK, I'll buy that - but again, until the code {exam} is "ABOLISHED" - we are "required" to have it for H.F. I WILL agree, once many pass their code exams, they never see a key or listen to a code tape - again...........

For what it is worth and THIS I've not kept up with - I have heard that there is a move afoot - by the FCC themselves - to abolish the code requirement. For some strange reason, September or October of this year comes to mind. I guess we'll have to wait and see.

Get you a four-on-the-floor Mustang and beat it with a
buggy whip to make it go faster?

And Real Hams use straight keys to key cathodes, not some
computer assisted solid-state modern electronic crap.

the most recent icom r1 that sold on ebay had 6 bids and sold for
$81. the batteries weren't working .... it had the manual with the
sale ....

this one was unblocked as well .... unblocked , however is
meaningless (not of value) these days as analog cell service is
about to become kaput.

Keep going, Cecil, they'll name a book of aphorisms after you
eventually.

3300. Tips and Tricks for Eavesdropping Detection

Newsgroup: rec.radio.scanner
Date: 2006-08-15 12:42:57 UTC
From: ctaylor@pinpoint-productions.com
Message-ID: <1155645777.880960.102020@m73g2000cwd.googlegroups.com>
Source record: 7430

First of all, let me thank the many of you who have requested that we produce a "Tips and Tricks for Eavesdropping Detection" video similar to award winning issue awareness video, The Red Balloon about industrial espionage and eavesdropping (http://www.tscmvideo.com).

Then answer is yes and we are in the script development stage of what will probably be a two to four hour video. While I am relatively sure that we have covered most areas, I also accept that sometimes you can be too close to the tress to see the forest. What I need from the groups are ideas about what specifics you would like to see covered.

Also, we are going to press next week for the Spanish version of Telephone Eavesdropping and Detection, which is the textbook I used at the Texas A&M's Advanced Telephone Eavesdropping Detection 40 hour seminars. The book will cost the same prices as the English version, but will have a red cover. All 300 original technical illustrations have been converted to Spanish also. (http://www.tscmvideo.com/book-telephone-eavesdropping.html).

Since we do not have a Spanish website, we are currently looking for distributors/dealers in Latin America.

Thank you,

Charlie Taylor

ctaylor@pinpoint-productions.com

Anyone going to visit the FCC website please leave them these ideas in
their comment box, Thanks.

1-No more automatic renewals. Individuals must retest and pass all
elements required for their license class.

2-The passing score for written exams needs to be raised to 85%.

3-Code elements should be 13 wpm for General, and 20 wpm for Extra.

4-Make the no-code license one year non-renewable.

If you're into definitions, look up "sarcasm" (which an aphorism
frequently is). But an aphorism can also be an opinion, whether true
or not.

>Try reading what I wrote.

Tsk, Klein, you don't write enough to read. It's all about
implications, inferences, and vague "truths" which don't
establish anything. Then you get pissed off when others
don't accept your "word" on things.

I will ask directly: ARE you an olde-fahrt? Or long-timer?
If so, HOW LONG?

Try not to be too vague on this. Real truth will establish
your "rep" in here. So far you don't have much of a "rep"
except we all know you are a PRO-CODER.

> "They didn't" ... "escape". Looks like the
>impostor (as far as understanding simple English) isn't me.

I can't see anyone named "They didn't" in the Google message
list, nor that of "escape."

Simply put, if you can't establish any bona fides for your
alleged long-timerness, I'll just put you in the "imposter"
list. [lots of folks from here in there...]

I've bought one of the Ramsey kits which should arrive this week.
http://www.ramseyelectronics.com/cgi-bin/commerce.exe?preadd=action&key=DDF1
I'll let you guys know how well it works when it's assembled.
Tracking to within a couple of houses is easy even without a radio that has
a signal meter but the doppler will make it all that much faster.
the serial ratbags and spastics in Sydney will get a fright when its up and
running. Unfortunately Sydney repeaters are going through one of those
phases where every sub-moron with a radio is having an obsessive compulsive
episode and we have about 20 whispering retards making the repeater
unusable. Hopefully within the next 4 weeks I can post an excel spreadsheet
with all their info. they usually piss off when they lose their anonymity.

3369. Need Schematic or info for Radio Shack Pro-30

Newsgroup: rec.radio.scanner
Date: 2006-08-16 23:22:04 UTC
From: cruikshank <cruikshank2@comcast.net>
Message-ID: <1155770524.377742.53010@h48g2000cwc.googlegroups.com>
Source record: 7349

I bought a Pro-30 for $5 today. Took a chance. At first it works, it scans but no audio. I open it and 4 wires are off. If I clip a earphone onto the leads marked Earphone it works, But I'm not sure where to hook the speaker wires. When I hook them up where I think they should go Blue to Blue and White to white.. I get the programing beep, but no Audio. Can someone help me with this. I'm looking at where to solder 4 wires and my paperweight is a scanner. Thanks, Dave in PA WB3EKN

Mark, Just ignore them.

They only tease you because of the stupid things you say when you
follow up. Just ignore them and they'll give up.

Stop giving them reasons to tease you. It only makes you look
more stupid.

Take a break from the radio groups for a while, Maybe work on your
moon bounce some more.

3383. Easier to read manual for the SC230 scanner

Newsgroup: rec.radio.scanner
Date: 2006-08-17 19:03:18 UTC
From: marksscanners@yahoo.com
Message-ID: <1155841398.027647.128080@i42g2000cwa.googlegroups.com>
Source record: 7263

Just finished an easier to read manual for the SC230 scanner:

http://myweb.cableone.net/marksscanners/230/230.html

3384. DTMF decoder from OPTO not working

Newsgroup: rec.radio.scanner
Date: 2006-08-17 22:23:54 UTC
From: Phil <pal531TheCat@mindspring.com>
Message-ID: <_%5Fg.9104$xp2.614@newsread1.news.pas.earthlink.net>
Source record: 7264

I have a Techtoyz from Optoelectronics Micro DTMF decoder that has been sitting in a drawer for several years that I just tried to use today. I put in a fresh battery and it did come on but displayed fragmented and incomplete characters. So I switched it to receive and hit redial on a phone and it did read the number dialed, but again displayed fragmented characters. When switched to recall, it displays the incomplete characters. There does not seem to be a visible user reset button on the unit.

Any ideas?
Is this worth repairing and is there actually anyone that would repair such an item?
Or should I just toss it?

Thanks,

Phil

>I'm not the one who misread "capacitors didn't *ESCAPE* getting color
>coded" for "capacitors didn't *GET* color coded" - YOU DID!

Nice attempt at misdirection, but a very old technique. :-)

That sort of misdirection is puerile (meaning childish).
If you have some bona fides on English grammar and some
false idea that ALL must be literal with NO departure from

such literalness, please state them. Otherwise go into
auto-fornication mode since we ain't buyin that, homie. :-)

Let's reprise. First you state that capacitors were never
color coded. You got called on that and corrected by more
than myself. Secondly, you've never admitted being wrong or
corrected. Third, you try to (badly) convince others that
those who corrected your statement are "wrong" or "at fault."

Amazing. You make mistakes and then try to convince all that
those mistakes never happened or that it is "wrong" to try to
correct your mistakes! :-)

Here's some more to chew on:

RFCs (Radio Frequency Chokes, inductors) in axial-lead plastic
tubular packages are STILL marked with color-code bands. There's
a MIL SPEC on that as all "long-time design engineers" should
know; such parts are even used in commercial market electronics.
It's really irrelevant HOW capacitors are marked as long anyone
using them can know their value and working voltage and
tolerance and apply them properly.

There are 7 (seven) amateur radio licensees in the USA that could
answer to "Al Klein." Are you one of those?

I can say without hesitation that I am NOT a licensed amateur.
I am a licensed commercial-professional in radio and have been
so for 50 years, beginning in military 24/7 big-time HF
communications 53 1/2 years ago. I have all sorts of valid
documentation on that and some in here have seen some of that.
Do you have ANYTHING in the way of ID? On the Internet?

Or, are you going to scribble meaningless misdirections in here,
attempting to portray some personal "outrage" for being
corrected? Especially about a well-known electronic component
identification method which you don't seem to know yet others
can verify?

I'll just put you down as an IMPOSTER poster, one of those
wanna-bees who might never have been anything but really,
really wants to be someone. That's up to you. I don't care.
I've seen your kind on the Internet, on the Bulletin Board
Systems since 1984. None have anything worthwhile to
contribute but all wanting to be a SOMEBODY on screens.

is it lcd display?
if so it might have got damp and the little cardonloaded edge connector on
the glass might be dirty from it.
if you can lightly push on the display
does it work better
mike

It is lcd display. But pushing on the display doesn't help. I think there must be something a bit more serious wrong with it because when I turn it off, it won't always turn back on unless I take out the battery, put it back in and start over again.

>There does not seem to be a visible user reset button on the unit.

Taking out the battery resets it.

If you can open it up, see if you can unplug the display - either pull
the display out of the socket or pull the connector off the display
(very carefully). Blow the connector out and wipe the card edge of
the display with a lint-free cloth (linen or a clean t-shirt).

Sitting a drawer for years can make the connection between the display
and the connector oxidize, so some of the signals aren't getting
through. Then, again, the display could just have gone bad. But
cleaning the connection won't cost anything.

I agree Bob, and maybe we'd have better operators as a result. Considering the waning interest in our dying hobby though, all that would probably do is eliminate even more operators from the ranks, leading the FCC to reduce our bands even more by selling them to the highest bidder.

Ham radio was so much better back in the late 70's, when I first became licensed. People were polite, and the radio had a mystique to it. With the internet and the immediate gratification that everyone seems to expect these days, Ham Radio is undesirable; having to hunt for contacts when you can just IM someone? Having to work for a license? Not anymore, no one wants to put any effort into anything when they have an easier alternative. Unfortunately, the good old days are gone, and ham radio is in the sunset of its existence.

>No, first YOU misunderstood "didn't escape being color coded" as
>meaning "didn't get color coded".

What is to "misunderstand?" Brian Burke wrote in that fashion,
perhaps too colloquially for your absolutely-literal standards
of English, but it was perfectly clear to most readers here.

>Then you tried to weasel out of
>looking like the ass you are by looking even more stupid.

Trying to insult those who challenge your "knowledge" of
electronic components isn't going to win you any points.

The FACT is that capacitors and axial-lead inductors have
been color-coded for decades. That can be verified by looking
at component manufacturers' catalogs and several textbooks
(even going back to the ITT "Green Bible" of the 50s) as well
as the ARRL Handbooks (several years worth).

You call that "stupid?"

I wouldn't. Any self-respecting worker who has been in
electronics for years wouldn't.

Had you wanted to be "civil" about it, you could have simply
acknowledged your mistake, stopped trying to build a Mt. Everest
out of a teaspoon of sand, and gone on with life. You did not.
You have MANUFACTURED a dispute, insulted your challengers, and
implied a number of things, all without any referencible data.

Your definition of "stupidity" seems to be that of ANYONE WHO
DISAGREES WITH YOU or one who DOES NOT HONOR AND BOW-DOWN TO
YOUR SUPPOSED MAJESTY AS AN AMATEUR.

Unfortunately, those "definitions" seem endemic to pro-coders,
those who insist on keeping a morse code test for amateur radio
into the far future. That viewpoint is entirely EMOTIONAL
based on your own experiences, has no validity in the supposed

"necessity" of keeping that morse code test in USA amateur radio licensing.

"You did it so everyone else has to..."

That's a selfish, self-righteous viewpoint in my opinion.

It confuses the actual necessities of a government regulating agency trying to mitigate many, many users of the civil radio spectrum with some fraternal-organization in-house "rules" of just one radio service out of many, "rules" that were established decades ago.

You cannot support your "cause" with anything but throwing personal insults at your challengers. You have already LOST your arguments concerning the morse code test issue. You win NOTHING except in your imagination.

It is even worse, perhaps sociopathic in that over-the-top self-righteousness, to claim you are a "better human being" just for having taken a morse code test...as an AMATEUR. You seem to look down your royal nose at all who wish to remove the code test from amateur radio licensing. Especially so when you cannot establish your bona fides of "long-term experience" supposedly in radio beyond amateur activities.

>You're not worth my time.

Obviously not, "your majesty." :-)

Here's a suggestion: Drop the "outraged" act and start thinking about the SUBJECT, not your own emotionalism. One good way to make you feel better to yourself is to find a morsemanship-support group. Such a group can sit around and praise one another. Makes all in the group warm and fuzzy holding the same opinion. Its also a way to hold off the future and any changes in regulations, but only within your own fantasies.

An alternative is to just LEAVE rec.radio.amateur.policy. Few in here see you as the Final Arbiter of what is "good" and what is "bad" in amateurism.

Leave or stay. Your choice. Matters not to me. Government will continue - in a democratic-process fashion - to serve ALL citizens, not just one group of radio spectrum users. A group, I might add, that is a distinct MINORITY of all radio users.

Think on that. [few pro-coders do]

It's a "sort-of" reminder, Mark, but let's clear up something:
I don't personally "loathe" this "exmarine." That person
isn't worth much in here, always insulting those who just
disagree with his viewpoint. It's not possible to have any
sort of dialogue with Major Dud. :-)

It's pretty much the same with all the self-righteous, ultra-
conservative (about the code test) pro-coders. Sigh.

As to Klein, all he seems to want in here is to FIGHT. In
that regard he is a clone of Robeson and first cousin to
several others in here. He is too haughty to correspond
with anyone who disagrees with him.

Perhaps someone once jammed an IC above his arm?
He has been going around "with a chip on his 'shoulder'"
ever since... :-)

>I agree Bob, and maybe we'd have better operators as a result. Considering
>the waning interest in our dying hobby though, all that would probably do is
>eliminate even more operators from the ranks, leading the FCC to reduce our
>bands even more by selling them to the highest bidder.

1. The FCC has NOT "reduced 'your' bands," nor is it somehow
threatening to "sell them" to anyone. Had you bothered to
look at this process of AUCTIONING certain COMMERCIAL bands
and the Congressional laws establishing it, you would have
seen that it does NOT apply to radio amateurs.

2. Since WARC-79 'you' have gotten MORE BANDS and that has
increased up to a few years ago when 'you' got the five
60m channels.

3. There doesn't seem to be any "waning interest" in USA
amateur radio considering the overall licensee numbers.
The newcomer licensees are - just managing - to keep the
licensee numbers in numeric bouyancy, almost keeping pace
with those letting their licenses lapse. See www.hamdata.
com FCC data page.

4. "Dying hobby" must be entirely subjective since there is
no real sign that amateur radio equipment and supplies
companies are closing down nor has the ARRL threatened to
dissolve their $15M per annum profit publishing business.
Since 1990 three INDEPENDENT amateur radio publications
have ceased, primarily due to lack of advertising revenue,
NOT for interest in the hobby.

>Ham radio was so much better back in the late 70's, when I first became
>licensed. People were polite, and the radio had a mystique to it.

I find that highly subjective, primarily in comparison to the
times of the mid-50s. Let's look at the "mystique" of the
late 1970s insofar as radio communications are concerned:

1. Communications satellites were well-established for
international video-audio relay with thousands of
circuits for voice and data. More would come in the
next three decades until the geosynchronous orbit
positions were filled before the 1990s were over.

2. HF spectrum users, the majority being commercial-government prior to the 1970s, were LEAVING HF for more reliable 24/7 circuit throughput IN the beginning of the 1970s. The peak use of HF occurred during the mid-1950s to 1960.

3. Tens of thousands of radio communications licensees (with all their users and equipment) were ALREADY up and communicating from low-VHF on up. That would continue to grow in the next three decades until the FCC and NTIA had to expand the VHF-and-up spectrum for such radio services as PLMRS (Private Land Mobile Radio Services), maritime radio (for private boat owners and inland-waterway and harbor comms).

4. MILLIONS of Citizen Band radios existed, CB (on HF) was created in 1958, two decades before the late-1970s. Licensing of CB had been dropped and the off-shore radio makers had established themselves in the radio market, including CB.

5. "Radio" was KNOWN to the general public as a means to communicate and had been known for decades. "Known" in a sense beyond the obvious of TV and AM and FM broadcasting and international telecasts. The public did NOT "know" that morse code modes were used except perhaps for watching the last of the "Westerns" on TV and old WW2 movies.

6. In the mid-1950s the BIG communicators on HF were already in a process of change of mode. Teleprinter data was the overwhelming majority mode for written communications for commercial and government users of the ONLY long-haul comm circuits. Microwave radio relay for both short and long distances on land had already begun. Only the maritime world held to their morse code modes with, rarely, voice on AM.

7. In the late 1970s 'you' already had solid-state HF radios (transmitters barely reaching 100 W PEP) with the beginnings of synthesized frequencies. VFOs, now reliable and stable, were a standard feature for frequency control. In the mid-1950s frequency control of the then-standard tube type radios was essentially one-crystal/one-frequency type unless one could afford a very expensive (then) "Collins" (or equivalent) manufactured radio.

8. The Semiconductor Era had already begun in ALL of electronics and new techniques and methods were the order of the day in comparison to the limitations of tube architecture in the mid-1950s. In that regard, there IS a "mystique."

I would state that a vast cornucopia of things were
suddenly opened by the many-plateau advances in
electronics technology, sometimes happening at a
rate of advancement that was near overwhelming.
Having been a part of the electronics industry for
53 years I not only saw it but was immersed in it,
doing it while keeping up with it.

>With the
>internet and the immediate gratification that everyone seems to expect these
>days, Ham Radio is undesirable; having to hunt for contacts when you can
>just IM someone? Having to work for a license? Not anymore, no one wants to
>put any effort into anything when they have an easier alternative.

Unless there has been some "stealth" action of government
to redefine FCC rules, amateur radio has ALWAYS been considered
a non-commercial AVOCATION. It is a HOBBY without having to be
stated as such in Parts 1 and 97 of Title 47 C.F.R. There is NO
legal necessity to "WORK" for a hobby pursuit, is there?

Absolutely YES, I will opt for an "easier alternative" to
ANYTHING! When I began in Big-Time HF radio communications,
the "easier alternative" ALREADY existed in the products of
Teletype Corporation. The teleprinter had already displaced
manual morse code modes for the majority of messaging even
before WW2 (in business and government and the military).

So, if 'we' all do this 'work' thing, who is going to
give 'us' this permission to exist on the same planet as
all you extras? Would 'we' be FIRED if 'we' didn't
'work?" [delusions of Donald Trump there?]

Ah..."not enough EFFORT being put forth" by us not-licensed-
in-the-AMATEUR-radio-service? Right...some of us have been
professionals in radio and electronics for decades, WITHOUT
any morsemanship tests! Even though we've put our own time
into keeping up with radio and electronics for all those
decades (without renumeration for those efforts), that isn't
good enough for you? Here, have a [rude Italian hand gesture]

The FCC was NEVER chartered as an academic institution and
those valued [suitable for framing] licenses are NOT "grades
earned" (after all that 'work'). The job of the FCC is just
regulate, mitigate ALL civil radio in the USA. Mere 'tenure'
as a radio amateur does NOT make someone better nor does all
the snarling about "nobody wants to 'work' for their license"
change anything. You want the US amateur radio regulations
to FREEZE in those old days ways? Fine, send in your
proposal to the FCC and tell them why it should remain in
the freezer. They MUST, by law, examine ALL proposals
submitted by citizens. [I wouldn't expect that they actually
put forth an NPRM on keeping regs on ice, but they WILL
look at it]

>Unfortunately, the good old days are gone, and ham radio is in the sunset of
>its existence.

1. Take your sunglasses off or step out from behind the
curtains. It is a BRIGHT day with sun HIGH in the sky
for amateur radio...unless you are one of the olde-
tymers who refuse to acknowledge change.

2. There exist new medications that can alleviate depression
and, perhaps, a feeling of ennui. See your doctor about
that.

3. "The good old days are gone?" THANK GOD! I was IN those
'good old days' and am damn glad that radio and electronics
has improved, gotten easier, enabled us (except morsemen)
to do more and better things! I look FORWARD to each and
every improvement that makes things EASIER! I've already
done lots of things with lots of personal labor and I
sincerely APPRECIATE whatever labor-saving, work-saving
things that are available now.

Hey, if you WORK real hard, study real hard, maybe you can
come up with a TIME MACHINE! Yeah, right, it could take you
back to those "good old days" that you seem to like so much.
Like back to a time when "ham" was a pejorative expressed by
professional morsemen? :-)

1: No more automatic renewals. Individuals must retest and
pass all elements required for their license class.

2: The passing score for written exams needs to be raised to 85%.

3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

4: Make the no-code license one year non-renewable.

Let's take back ham radio.

73

3417. It's amazing what people will say to try to justify dumbing down Amateur Radio.

Mark, Just ignore them.

They only tease you because of the stupid things you say when you
follow up. Just ignore them and they'll give up.

Stop giving them reasons to tease you. It only makes you look
more stupid.

Take a break from the radio groups for a while, Maybe work on your
moon bounce some more.

Can anybody give me advice on which frequencies I should be targeting for my first scanner purchase - in Oskaloosa, Iowa?

Do I need digital, or is my area mostly analog? I'm looking to start out cheap, but don't want to start out disappointed, so any advice on frequencies and analog/vs digital for my specific area would be helpful.

thx

Glen
Don't know if I 100% agree with your code speeds but I do thing the NO Code
should be for 1 year and none renewable.
I had to take my license in front of the FCC and not so VE who may or may
not help you out to get a license.
As I am a big VHFer I don't know how these NO Code guys are going to
understand beacons. They are all code and most at 10 ~ 20 wpm. I guess the
next thing will be, they will want all beacons either digital or voice. YUK!
Not up in the GHZ range yet but maybe some day.
73, Bill, WA0KBZ

Everything there is analog (even the RACOM trunked system you see the link to at the top) with the exception of the Alliant Energy system which, being iDen, can't be monitored with any existing scanner. So a Pro97 or a Uniden 246 or 330 (or even a Pro95) will do just fine. Whichever scanner you decide to get, get the programming cable (Unidens come with one) and some programming software (there are trial versions of the good ones, Uniden, ARC and Starrsoft).

Thanks for the reply/info. I'm thinking of starting with a PRO-2052
since they are on sale for a hundred bucks right now. It sounds like
that will work for now then. It has the serial in/out so that I can
program it and get the frequency info for streaming (so the wife and I
can both listen and see frequency info from work).

Now you have me thinking though, the pro97 is not much more expensive
and it's pretty portable. I wonder if I'll actually utilize the
ability to grab the frequency info for streaming.. or maybe the
portability would be better... *sigh* decisions... decisions..

I figure after I get "hooked", I'll be looking for something a little
nicer, but if one of these will work for now, that's cool.

Thanks again!

3435. Looking for Freqs & Help

Newsgroup: rec.radio.scanner

Here's the picture...My Mother is going on a cruise in December. I've been trying to get her into scanning. The cruise starts in Sydney Australia IIRC, and then proceeds around the New Zealand Islands.

I'm going to program in the international maritime frequencies and the on board ship frequencies (I may not have all of those BTW)

Haven't googled yet (but will). What would be good frequencies to program in while she cruises and is in port(s) other than the VHF Marine freqs? Especially anything she could hear on the ship, coming from the land.

She'll be using my Pro-95 (on which *I* still haven't figured out the trunking...sigh) and she is definitely *not* technically minded. I'll just be teaching her how to lock/unlock channels and banks, use the squelch and volume control. I'll do *all* the programming.

Thanks for any and all suggestions....Hmm maybe I'll throw in both her airports of departure....Something to listen to while she's waiting <g>

Eric

Are you a serious scanner?

I will trade "ACTIVE" frequencies in the Boise County and Ada County
of Idaho.

Hello Brian,

This "dispute manufacturing" technique probably predates Robeson
by centuries... :-)

Anyway, it is an old, old technique of computer-modem comms and
was seen on ARPANET back before the first BBSs existed.

It's a way of bluff by the "manufacturer" to get around actually
replying to some challenge made by others. That's usually
accompanied by the manufacturer's veiled or outright personal
insults levelled against the challenger. Robeson uses the latter
more than the former.

Noooooo. I worked a STATION on the moon, namely one of the
ALSEP (Apollo Lunar Surface Experiment Package). Sent a
command to the SWS (Solar Wind Spectrometer) part, got the
response back on earth. Two-way. The ALSEPs are now
silent, nobody can work them. :-)

Quite true, Brian. Those of us who were here 1 to 2 years ago
had an eyefull of his continuous - but faulty - efforts to "tell" us
all about His fantasy of things. :-)

Mainly it was his abject refusal to back down when faced with
definitive directives by the government (DoD) in regard to the
Military Affiliate Radio System. Weeks went by without his
admitting that the Directive existed. His final communication
on the subject would NOT openly admit to error but was laced
with more personal insults on his challengers. Sad.
